-

1. Business & Strategy

1. SWOT Analysis Deep Dive

When to use: Before making a major strategic decision about your business or a new initiative.

Prompt:

Act as a senior strategy consultant. Conduct a comprehensive SWOT analysis for [COMPANY/PRODUCT] in the [INDUSTRY] space.

For each quadrant, provide exactly 5 items ranked by impact (highest first). For each item:

- One-line description
- Why it matters (1 sentence)
- Concrete action to take (1 sentence)

After the SWOT grid, provide:

1. The single biggest strategic opportunity (where a Strength meets an Opportunity)
2. The most dangerous vulnerability (where a Weakness meets a Threat)
3. Three prioritized strategic moves for the next 90 days

Context about the business: [PASTE 2–3 SENTENCES ABOUT YOUR BUSINESS]

Pro tip: Replace the bracketed sections with real details — the more specific your context, the sharper the analysis.

2. Business Model Canvas Generator

When to use: When designing or pressure-testing a business model for a new venture or pivot.

Prompt:

Create a complete Business Model Canvas for [BUSINESS IDEA]. Fill in all 9 blocks with specific, actionable content – not generic placeholders.

For each block, provide:

- 3–5 specific entries (not vague categories)
- One risk or assumption to validate

Blocks:

1. Customer Segments – who exactly pays, and who uses
2. Value Propositions – what specific pain you solve, stated from the customer's perspective
3. Channels – how you actually reach and deliver to customers
4. Customer Relationships – how you acquire, retain, and grow accounts
5. Revenue Streams – exact pricing model, price points, and payment terms
6. Key Resources – what you absolutely need to operate (people, tech, IP, capital)
7. Key Activities – the 3–5 things you must do excellently
8. Key Partnerships – who you depend on and what you need from them
9. Cost Structure – top 5 costs ranked by size, with rough monthly estimates

End with: "Three experiments to validate the riskiest assumptions in this model" – each with a method, timeline (<2 weeks), and success metric.

Business idea: [DESCRIBE IN 3–5 SENTENCES]

Pro tip: Run this twice — once for your ideal model, once for a bootstrapped/lean version. Compare the gaps.

3. Competitor Intelligence Brief

When to use: When you need a structured competitive analysis for planning, fundraising, or positioning.

Prompt:

Create a competitive intelligence brief comparing [YOUR COMPANY] against these competitors: [COMPETITOR 1], [COMPETITOR 2], [COMPETITOR 3].

Structure the analysis as:

****1. Competitive Landscape Map****

- Position each company on two axes: [AXIS 1, e.g., price] vs [AXIS 2, e.g., feature depth]
- Describe the positioning in words since you can't draw

****2. Feature Comparison Matrix****

Compare across these dimensions (rate each: Strong / Adequate / Weak / Absent):

- Core product capabilities
- Pricing & packaging
- Target customer fit
- Distribution/go-to-market
- Brand & community
- Technical moat

****3. Each Competitor Profile**** (for each):

- What they do well that we should learn from
- Their biggest vulnerability we can exploit
- Their likely next move in the next 6–12 months

****4. Strategic Implications****

- Where we have a defensible advantage
- Where we're most vulnerable to attack
- Three specific differentiation moves we should make

Our company context: [2–3 SENTENCES]

Pro tip: Feed in actual competitor website URLs, pricing pages, or recent press releases as additional context for sharper results.

4. Financial Projection Model

When to use: When building revenue forecasts for planning, fundraising, or budgeting.

Prompt:

Build a 12-month financial projection for [BUSINESS] with three scenarios: Conservative, Base, and Aggressive.

Inputs:

- Business model: [SUBSCRIPTION/ONE-TIME/USAGE-BASED/etc.]
- Current MRR or monthly revenue: [AMOUNT]
- Average deal size: [AMOUNT]
- Current customer count: [NUMBER]
- Monthly growth rate (recent): [PERCENTAGE]
- Monthly burn/operating costs: [AMOUNT]
- Team size: [NUMBER]

For each scenario, create a month-by-month table showing:

Month	New Customers	Churned	Total Customers	MRR	Expenses	Net Cash Flow	Cumulative Cash
-------	---------------	---------	-----------------	-----	----------	---------------	-----------------

Assumptions for each scenario:

- Conservative: [define realistic floor]
- Base: [current trajectory continues]
- Aggressive: [things go well – new channel, viral moment, etc.]

After the tables, provide:

1. Month when each scenario hits profitability (or if it doesn't in 12 months, say so)
2. Total funding needed for each scenario to survive 12 months
3. The single metric that matters most to track weekly
4. Three levers to pull if you're tracking below the Base case

Pro tip: Use your real numbers, even if they're small. Honest projections are infinitely more useful than aspirational fiction.

5. Pitch Deck Narrative Builder

When to use: When crafting the story arc for an investor pitch deck.

Prompt:

Write the narrative script for a 12-slide pitch deck for [COMPANY]. This isn't bullet points – write the actual words I should say on each slide, as if you're coaching me to deliver a compelling 8-minute pitch.

Slide structure:

1. ****Hook**** – Open with a specific, vivid story or statistic that makes the problem real
2. ****Problem**** – The pain, who feels it, why existing solutions fail
3. ****Solution**** – What we built, explained in one sentence a 12-year-old would understand
4. ****Demo/Product**** – Describe the key "aha moment" a user experiences
5. ****Market Size**** – TAM/SAM/SOM with bottom-up logic, not just top-down hand-waving
6. ****Business Model**** – How we make money, unit economics, pricing
7. ****Traction**** – Key metrics, growth rate, notable customers or milestones
8. ****Competition**** – Why we win (not "there's no competition" – that's a red flag)
9. ****Go-to-Market**** – How we acquire customers, what's working, what's next
10. ****Team**** – Why THIS team is uniquely positioned to win THIS market
11. ****Financials**** – Key projections, what we'll do with the money
12. ****The Ask**** – How much, what terms, what milestones it buys

For each slide, include:

- The exact words to say (60–90 seconds of speaking per slide)
- One suggested visual or data point to display
- The emotional beat (what the investor should feel at this point)

Company context: [PASTE YOUR COMPANY DESCRIPTION, TRACTION, AND FUNDRAISE DETAILS]

Pro tip: Practice delivering it out loud — if any slide feels awkward to say, it needs rewriting. The AI gives you the structure; your authenticity makes it land.

6. Market Sizing Calculator

When to use: When you need credible TAM/SAM/SOM figures for a business plan or pitch.

Prompt:

Calculate the market size for [PRODUCT/SERVICE] using both top-down and bottom-up approaches. I need numbers I can defend to a skeptical investor.

****Top-Down Approach:****

- Start with the broadest relevant market
- Apply logical filters to narrow to our addressable market
- Show each step with sources or reasoning

****Bottom-Up Approach:****

- Start with our unit economics: [PRICE POINT], [SALES CYCLE], [CLOSE RATE]
- Calculate: How many potential customers exist in our target segment?
- What's a realistic penetration rate in Year 1, Year 3, Year 5?
- Multiply through to revenue

****Output Format:****

- TAM (Total Addressable Market): \$X – the entire market if we had 100% share
- SAM (Serviceable Addressable Market): \$X – the portion we can realistically reach
- SOM (Serviceable Obtainable Market): \$X – what we can capture in 3 years with our resources

Show your math at each step. Flag assumptions clearly. Where data is uncertain, give a range.

End with: "The three biggest assumptions in this sizing that need validation" and how to validate each.

Product: [DESCRIBE WHAT YOU SELL, TO WHOM, AT WHAT PRICE]

Market context: [GEOGRAPHY, INDUSTRY, ANY KNOWN DATA POINTS]

Pro tip: Investors see through inflated TAMs instantly. A \$500M well-reasoned SAM is more credible than a \$50B hand-wave.

7. OKR Framework Builder

When to use: When setting quarterly objectives and key results for your team or company.

Prompt:

Create OKRs for [TEAM/COMPANY] for [QUARTER, e.g., Q2 2025].

Context:

- Company stage: [SEED/SERIES A/GROWTH/etc.]
- Top priority this quarter: [ONE SENTENCE]
- Biggest challenge right now: [ONE SENTENCE]
- Team size: [NUMBER]

Generate 3 Objectives, each with 3–4 Key Results. Follow these rules:

- Objectives are qualitative and inspirational (no numbers in objectives)
- Key Results are quantitative, measurable, and have a specific target number
- Each KR should be achievable but ambitious (70% confidence of hitting it)
- Include a mix of output KRs (what we produce) and outcome KRs (what changes as a result)

For each Key Result, also specify:

- ****Owner:**** [Role responsible]
- ****Current baseline:**** [Where we are now – I'll fill this in]

- **Leading indicator:** What weekly metric tells us if we're on track
- **Confidence level:** How likely we are to hit this (low/medium/high)

End with:

- One "health metric" per Objective (something that shouldn't get worse while we pursue the OKR)
- A suggested weekly check-in format (5 minutes max)

Pro tip: If everything is “high confidence,” your OKRs aren’t ambitious enough. The sweet spot is 2-3 stretch KRs mixed with 1-2 you’re fairly sure about.

8. Hiring Scorecard Creator

When to use: When defining a role and evaluation criteria before starting a search.

Prompt:

Create a comprehensive hiring scorecard for a [JOB TITLE] role at [COMPANY TYPE, e.g., "Series A B2B SaaS startup"].

****Section 1: Role Definition****

- Mission of this role (one sentence: "This person succeeds when...")
- Three outcomes they must deliver in the first 90 days
- Three outcomes they must deliver in the first year
- Who they report to and who reports to them

****Section 2: Evaluation Criteria****

Create a scorecard with these categories, each rated 1-5:

Must-Have Skills (dealbreakers if absent):

- [Skill 1] – what "5" looks like vs what "2" looks like
- [Skill 2] – same
- [Skill 3] – same

Nice-to-Have Skills (differentiators):

- [Skill 1-3] – what "5" looks like

Cultural/Behavioral Attributes:

- [3-4 attributes] – what "5" looks like vs what "2" looks like

****Section 3: Interview Plan****

- Screen call (15 min): 3 questions to ask, what you're filtering for
- Technical/skills interview (45 min): 3 exercises or questions, what great answers look like
- Culture/values interview (30 min): 3 behavioral questions, what great answers look like
- Reference check: 3 specific questions to ask references

****Section 4: Compensation Benchmark****

- Suggested range for [LOCATION/REMOTE]
- Equity consideration for this stage

Role context: [DESCRIBE WHAT THIS PERSON WILL DO AND WHY YOU'RE HIRING NOW]

Pro tip: Share the scorecard with your entire interview panel before they meet candidates — it forces alignment and prevents “gut feel” hiring.

9. Board Meeting Prep Pack

When to use: 5-7 days before a board meeting to prepare your materials.

Prompt:

Help me prepare a board meeting package for [COMPANY]. The meeting is in [X] days.

Current state:

- MRR/Revenue: [AMOUNT]
- Growth rate: [PERCENTAGE]
- Burn rate: [AMOUNT]
- Runway: [MONTHS]
- Team size: [NUMBER]
- Key wins since last board meeting: [LIST 2-3]
- Key misses or challenges: [LIST 2-3]

Create the following:

****1. CEO Update (1 page)****

- 3-sentence state of the company
- Top 3 accomplishments since last meeting
- Top 3 priorities for next quarter
- The #1 thing keeping me up at night

****2. KPI Dashboard Narrative****

- For each metric, write one sentence explaining the "so what" behind the number
- Flag any metrics trending in a concerning direction and what we're doing about it

****3. Discussion Topics****

- Suggest 2-3 strategic questions worth debating with the board
- For each, frame it as: "We're deciding between [Option A] and [Option B]. Here's the trade-off."

****4. Asks from the Board****

- Template for 2-3 specific asks (introductions, advice, decisions needed)
- Each formatted as: "I need [WHAT] because [WHY] by [WHEN]"

****5. Anticipated Questions****

- List 10 tough questions a board member might ask
- Draft a concise, honest answer for each

Pro tip: Send the board deck 48 hours before the meeting. Board members who read ahead ask better questions and waste less time on status updates.

10. Strategic Partnership Evaluator

When to use: When considering whether to pursue a partnership, integration, or co-marketing deal.

Prompt:

Evaluate whether [YOUR COMPANY] should pursue a partnership with [PARTNER COMPANY].

Assess across these dimensions:

****1. Strategic Fit (Score 1-10)****

- How well do our customer bases overlap?
- Does this partnership accelerate our core strategy or distract from it?
- What does each side bring that the other lacks?

****2. Economic Analysis****

- What's the realistic revenue impact in Year 1?
- What's the cost to implement and maintain this partnership?
- What's the opportunity cost – what won't we do because we're doing this?

****3. Power Dynamics****

- Who needs this partnership more?
- What happens if they copy our product/feature instead?
- Can they cut us off easily? Can we cut them off easily?

****4. Execution Risk****

- What has to go right for this to work?
- What's the minimum viable version of this partnership we could test in 30 days?
- What internal resources does this require?

****5. Recommendation****

- Go / No-Go / Conditional Go (with specific conditions)
- If Go: Three concrete next steps with owners and deadlines
- If No-Go: What would have to change to reconsider

Our company: [2-3 SENTENCES]

Partner company: [2-3 SENTENCES]

What the partnership would involve: [DESCRIBE THE PROPOSED ARRANGEMENT]

Pro tip: The best partnerships have clear, asymmetric value — each side gets something they can't easily build themselves. If it's "we'll share each other's content," it's probably not worth the calendar time.

11. Pricing Strategy Architect

When to use: When setting or revising pricing for a product or service.

Prompt:

Design a pricing strategy for [PRODUCT/SERVICE].

Context:

- Current pricing (if any): [DESCRIBE]
- Target customer: [WHO]
- Main competitors and their pricing: [LIST]
- Our cost to serve one customer: [AMOUNT]
- What customers value most: [LIST TOP 3]

Create three pricing models I should consider:

For each model:

1. Structure (flat rate, tiered, per-seat, usage-based, freemium, etc.)
2. Specific price points with tier names and what's included
3. Projected conversion rate and revenue per 1,000 visitors
4. Psychological pricing tactics applied
5. What customer objections this model creates and how to handle them

Then recommend the best model and explain:

- Why it fits our stage and market
- How to grandfather existing customers
- A 90-day rollout plan
- The A/B test I should run to validate it
- When to revisit and adjust pricing (triggers, not just time-based)

Pro tip: Price based on value delivered, not cost to produce. If your product saves someone \$10K/year, charging \$99/month is a bargain — don't price it at \$19 because "it only costs \$2 to serve."

12. Unit Economics Calculator

When to use: When you need to understand the true profitability of your business model.

Prompt:

Calculate and analyze the unit economics for [BUSINESS].

Inputs (fill in what you know, I'll tell you where the gaps are):

- Average Revenue Per User (ARPU): [MONTHLY AMOUNT]
- Customer Acquisition Cost (CAC): [AMOUNT]
 - Marketing spend last month: [AMOUNT]
 - Sales team cost last month: [AMOUNT]
 - New customers acquired last month: [NUMBER]
- Gross margin: [PERCENTAGE]
- Monthly churn rate: [PERCENTAGE]
- Average customer lifespan: [MONTHS]
- Time to payback CAC: [MONTHS]

Calculate:

1. ****LTV**** (Lifetime Value) – using both simple and DCF methods
2. ****LTV:CAC Ratio**** – and what it means for our stage
3. ****CAC Payback Period**** – in months
4. ****Gross Margin per Customer**** – monthly and annual
5. ****Break-even point**** – customers needed to cover fixed costs of [AMOUNT/month]

Analysis:

- Are these unit economics venture-scale? Lifestyle-business-scale? Unsustainable?
- What are the top 3 levers to improve them, ranked by ease of impact?
- What benchmarks should we target for our industry/stage?
- Where is the hidden cost or risk I'm probably not accounting for?

Pro tip: LTV:CAC ratio of 3:1 is the classic benchmark, but payback period matters more for cash-constrained startups. A 3:1 ratio with 18-month payback can still kill you.

13. Risk Assessment Matrix

When to use: Before launching a major initiative, entering a new market, or making a large investment.

Prompt:

Create a risk assessment matrix for [PROJECT/INITIATIVE].

Context: [DESCRIBE THE INITIATIVE IN 3-5 SENTENCES]

Identify 12-15 risks across these categories:

- Market risks (demand doesn't materialize, timing is wrong)
- Execution risks (we can't build it, can't hire, takes too long)
- Financial risks (runs out of money, pricing wrong, costs explode)
- Competitive risks (someone beats us, incumbent responds)
- Regulatory/legal risks (compliance, IP, liability)
- Technical risks (doesn't scale, security, dependencies)

For each risk:

Risk	Category	Likelihood (1-5)	Impact (1-5)	Risk Score	Mitigation	Owner
------	----------	------------------	--------------	------------	------------	-------

Sort by Risk Score (Likelihood × Impact) descending.

Then provide:

1. ****Top 3 "Must Mitigate" risks**** – detailed mitigation plans with timelines
2. ****Top 3 "Monitor" risks**** – early warning signals to watch for
3. ****Kill criteria**** – specific conditions under which we should abandon this initiative entirely
4. ****Pre-mortem:**** Write 3 sentences describing the most likely failure scenario. What went wrong?

Pro tip: The pre-mortem is the most valuable part. “Imagine it’s 6 months from now and this failed — what happened?” unlocks risks your optimism-biased brain is hiding.

14. Customer Segmentation Framework

When to use: When you need to identify and prioritize your most valuable customer segments.

Prompt:

Create a customer segmentation framework for [BUSINESS/PRODUCT].

What we know about our customers:

- Total customers: [NUMBER]
- Revenue range: \$[LOW] to \$[HIGH] per customer
- Key industries served: [LIST]
- Common use cases: [LIST]
- Biggest customer complaints: [LIST]

Build segments using these approaches:

****1. Value-Based Segmentation****

Divide customers into 4 tiers based on revenue and growth potential:

- Champions (high value, growing)
- Core (stable revenue, steady)
- At-Risk (declining usage or engagement)
- Low-Value (small accounts, high support cost)

****2. Needs-Based Segmentation****

Identify 3–5 distinct customer personas based on what they're trying to accomplish.

For each: Name, Job Title, Company Size, Primary Need, Willingness to Pay, Best Channel to Reach.

****3. Behavioral Segmentation****

Define segments based on how they use the product:

- Power users vs casual users
- Feature preferences
- Support patterns

****4. Strategic Recommendations****

- Which segment should we double down on? Why?
- Which segment should we fire? Why?
- What product changes would unlock the most valuable underserved segment?
- Suggested pricing tiers aligned to segments

Pro tip: The segment you should “fire” (stop serving) is often the most liberating strategic decision. Not all revenue is worth keeping.

15. Decision Framework: Should We Build This?

When to use: When your team is debating whether to build a new feature, product, or initiative.

Prompt:

Help me make a build/buy/skip decision for [FEATURE OR INITIATIVE].

Context: [DESCRIBE WHAT'S BEING PROPOSED AND WHY]

Evaluate using this framework:

****1. Demand Signal Strength** (Score 1–10)**

- How many customers have asked for this? [NUMBER]
- Have we lost deals because of this gap? [Y/N, DETAILS]
- Is this a "hair on fire" problem or a "nice to have"?
- Would customers pay more for this? Evidence?

****2. Strategic Alignment** (Score 1–10)**

- Does this reinforce our core value proposition?
- Does this move us toward our 3-year vision?
- Does this create a moat or is it easily copied?

****3. Effort & Opportunity Cost** (Score 1–10, where 10 = low effort)**

- Engineering estimate: [WEEKS/MONTHS]
- What will we NOT build if we build this?
- Can we achieve 80% of the value with 20% of the effort?

****4. Risk** (Score 1–10, where 10 = low risk)**

- What could go wrong technically?
- What could go wrong with adoption?
- Is this reversible if it doesn't work?

****Verdict:**** Calculate weighted score. Recommend: Build / Buy (integrate existing solution) / Skip (don't do it) / Defer (not now, revisit in [timeframe])

If Build: Propose a 2-week MVP scope that tests the core assumption.

If Buy: Suggest 3 potential solutions to evaluate.

If Skip: Explain what would have to change to reconsider.

Pro tip: The highest-impact question is “What will we NOT build if we build this?” — every yes is an implicit no to something else.

16. Investor Update Email Template

When to use: Monthly or quarterly update to investors, advisors, or board members.

Prompt:

Write an investor update email for [COMPANY] for [MONTH/QUARTER].

Data to include:

- MRR: \$[AMOUNT] (was \$[PREVIOUS])
- Growth rate: [X]% MoM
- Customers: [NUMBER] (was [PREVIOUS])
- Churn: [X]%
- Burn: \$[AMOUNT]/month
- Runway: [X] months
- Cash in bank: \$[AMOUNT]
- Team: [NUMBER] (any changes)

Top 3 wins: [LIST]

Top 3 challenges: [LIST]

Key hire we're making: [ROLE]

Write the email in this structure:

1. ****TL;DR**** – 2–3 sentences. Tone: honest and confident, not salesy
2. ****Key Metrics**** – clean table, with MoM or QoQ change arrows
3. ****Wins**** – brief paragraph on what went well and why
4. ****Challenges**** – brief paragraph on what's hard and what we're doing about it
5. ****Asks**** – 2–3 specific requests (intros, advice, referrals) with enough context to act on
6. ****What's Next**** – top 3 priorities for next month/quarter

Tone: Transparent, concise, founder-voice. Not corporate, not desperate. The kind of update that makes investors forward it to other investors.

Pro tip: The “Asks” section is the most important and most underused part of investor updates. Investors want to help — but they need specific, actionable requests, not vague “let us know if you know anyone.”

17. Go-to-Market Strategy Builder

When to use: When launching a new product, entering a new market, or revamping your growth approach.

Prompt:

Build a go-to-market strategy for [PRODUCT] targeting [CUSTOMER SEGMENT].

Context:

- Product: [WHAT IT DOES, KEY FEATURES]
- Price: [AMOUNT AND MODEL]
- Current stage: [PRE-LAUNCH / BETA / LAUNCHED]
- Budget: \$[AMOUNT] for first 90 days
- Team: [WHO'S AVAILABLE – founder only? Small marketing team?]

Create a GTM plan covering:

****1. Positioning Statement****

For [target customer] who [has this problem], [product name] is a [category] that [key benefit]. Unlike [competitors], we [key differentiator].

****2. Launch Sequence (Week-by-week for 12 weeks)****

Week 1–2: [Pre-launch activities]

Week 3–4: [Launch week activities]

Week 5–8: [Post-launch growth]

Week 9–12: [Optimization and scaling]

****3. Channel Strategy (rank by expected ROI)****

For each channel: What to do, expected CAC, timeline to results, effort level.

- Consider: Content/SEO, paid ads, partnerships, community, outbound, product-led, referral

****4. Messaging Matrix****

| Audience | Pain Point | Message | CTA | Channel |

****5. Success Metrics****

- North star metric
- 5 supporting metrics
- Weekly dashboard checklist
- "Are we on track?" criteria at 30/60/90 days

Pro tip: Most GTM plans fail from spreading too thin across channels. Pick ONE channel to master first, prove it works, then add the second.

18. Cash Flow Management Plan

When to use: When managing cash flow for a startup or small business, especially pre-profitability.

Prompt:

Create a cash flow management plan for [BUSINESS].

Current situation:

- Monthly revenue: \$[AMOUNT]
- Monthly expenses: \$[AMOUNT]
- Cash in bank: \$[AMOUNT]
- Accounts receivable: \$[AMOUNT]
- Monthly burn rate: \$[AMOUNT]
- Expected revenue growth: [X]% per month

Build:

****1. 13-Week Cash Flow Forecast****

| Week | Starting Cash | Cash In | Cash Out | Ending Cash | Notes |

Show each week with expected inflows and outflows.

****2. Cash Conservation Tactics****

- 5 ways to accelerate cash inflows (without discounting)
- 5 ways to delay or reduce cash outflows (without damaging relationships)
- 3 one-time cash generation ideas

****3. Decision Triggers****

- At \$[X] cash remaining: take these actions
- At \$[Y] cash remaining: take these emergency actions
- At \$[Z] cash remaining: this is the "wind down responsibly" threshold

****4. Fundraising Timing****

- Based on this trajectory, when should we start fundraising?
- How much runway should we have when we start the process?
- What milestones should we hit before raising to maximize terms?

Flag any week in the forecast where cash drops below 8 weeks of expenses.

Pro tip: 13-week cash flow is the gold standard because it forces you to think in real operational weeks, not theoretical months. Update it every Friday.

19. Exit Strategy Planner

When to use: When thinking about acquisition positioning, exit timing, or succession planning.

Prompt:

Develop an exit strategy analysis for [COMPANY].

Company profile:

- Industry: [INDUSTRY]
- Annual revenue: \$[AMOUNT]
- Growth rate: [X]%
- Profitability: [Y/N, MARGIN]
- Team size: [NUMBER]
- Key assets: [IP, DATA, CUSTOMERS, BRAND, etc.]
- Time horizon: [WHEN YOU'D WANT TO EXIT]

Analyze three exit paths:

****1. Strategic Acquisition****

- 5 most likely acquirers and why they'd want us
- What we'd need to be worth \$[TARGET VALUATION]
- What strategic acquirers look for in due diligence
- How to position ourselves as an acquisition target without looking desperate

****2. Private Equity / Financial Buyer****

- What multiples PE firms pay for businesses like ours
- What they'd want to see in our financials
- How to make the business "PE-ready" (processes, team, contracts)

****3. Lifestyle / Hold & Optimize****

- How to maximize cash distributions
- Building a management team to reduce owner dependence
- Tax optimization strategies to explore with an accountant

****Recommendation:**** Which path maximizes total outcome (financial + personal) and what's the 24-month roadmap to get there?

Pro tip: The best time to plan your exit is years before you want one. Companies that are “always ready” to be acquired get 2-3x better offers than fire sales.

20. Scenario Planning Workshop

When to use: When facing significant uncertainty and need to prepare for multiple futures.

Prompt:

Facilitate a scenario planning exercise for [COMPANY/DECISION].

Context: [DESCRIBE THE DECISION OR UNCERTAINTY YOU'RE FACING]

Create four distinct scenarios based on two key uncertainties:

- Uncertainty 1: [e.g., "Market demand grows fast vs. stays flat"]
- Uncertainty 2: [e.g., "Regulation tightens vs. stays loose"]

****Scenario A: [Name]** (Uncertainty 1: High, Uncertainty 2: High)**

- What this world looks like in 2 years
- How our business performs in this scenario
- What we should do NOW to prepare for this world

****Scenario B: [Name]** (Uncertainty 1: High, Uncertainty 2: Low)**

- Same structure

****Scenario C: [Name]** (Uncertainty 1: Low, Uncertainty 2: High)**

- Same structure

****Scenario D: [Name]** (Uncertainty 1: Low, Uncertainty 2: Low)**

- Same structure

****Robust Strategies** (work well across ALL scenarios):**

- List 3-5 "no regret" moves that are smart regardless of which scenario unfolds

****Signposts to Watch:****

- For each scenario, identify 2-3 early signals that tell us this scenario is becoming reality
- Define specific trigger points: "If [X happens], we execute [Plan Y]"

Pro tip: The value isn't predicting which scenario will happen — it's having pre-made playbooks so you can respond in days instead of months when reality reveals itself.

21. Stakeholder Communication Plan

When to use: When managing a major change, launch, or crisis that affects multiple groups.

Prompt:

Create a stakeholder communication plan for [INITIATIVE/CHANGE].

Context: [DESCRIBE WHAT'S HAPPENING AND WHY]

Stakeholder groups: [LIST – e.g., employees, customers, investors, partners, press, regulators]

For each stakeholder group, define:

Stakeholder Owner	What They Care About	What They Fear	Key Message	Channel	Timing
-------------------	----------------------	----------------	-------------	---------	--------

Then create:

****1. Messaging Hierarchy****

- Internal announcement (employees first – always)
- Customer communication
- Partner/vendor notification
- Public/press statement
- Social media messaging

****2. For each communication, draft the actual message**** (not bullet points – the words)

****3. FAQ Document****

- 10 questions each group is likely to ask
- Pre-approved answers for each

****4. Escalation Plan****

- Who handles tough questions from each group
- Response time SLAs (e.g., customer emails within 4 hours)
- When to escalate to CEO/founder

****5. Timeline****

Day-by-day communication schedule for the first 2 weeks.

Pro tip: Employees should always hear news from you before they hear it from customers or Twitter. Internal first, always.

22. Burn Rate Optimizer

When to use: When you need to extend runway without killing growth.

Prompt:

Analyze our burn rate and find smart cuts for [COMPANY].

Current monthly expenses:

- Salaries & benefits: \$[AMOUNT]
- Software & tools: \$[AMOUNT] (list key tools and costs if possible)
- Hosting & infrastructure: \$[AMOUNT]

- Marketing & advertising: \$[AMOUNT]
- Office & workspace: \$[AMOUNT]
- Professional services (legal, accounting): \$[AMOUNT]
- Other: \$[AMOUNT]

Current MRR: \$[AMOUNT]

Current runway: [MONTHS]

Target runway: [MONTHS]

Provide:

****1. Cut Categories**** (for each expense line):

- Can cut immediately with zero impact on growth
- Can cut with minor impact – worth it if runway is < [X] months
- Should NOT cut – this directly drives revenue

****2. Revenue Acceleration Opportunities****

- 3 ways to increase revenue in the next 30 days (not 6 months)
- Quick pricing or packaging changes that could boost ARPU

****3. Recommended Plan****

- If we need to extend runway by 3 months: cut [these things], save \$[amount]
- If we need to extend runway by 6 months: cut [these things], save \$[amount]
- If we need to extend runway by 12+ months: here's the "survival mode" plan

****4. What NOT to Cut**** (and why)

- The expenses that look cuttable but would actually be value-destructive

Pro tip: Cut once, cut deep. Multiple rounds of small cuts destroy morale worse than one painful but honest restructuring.

23. Advisory Board Structure

When to use: When setting up a formal or informal advisory board for your company.

Prompt:

Design an advisory board structure for [COMPANY] at [STAGE].

What we need help with: [LIST 3–5 AREAS – e.g., enterprise sales, ML/AI, regulatory, fundraising, scaling ops]

Create:

****1. Ideal Board Composition****

- [X] advisors total
- For each seat: Title of expertise area, ideal background, what "great" looks like, what to avoid

****2. Compensation Framework****

- Equity range for advisors at our stage
- Vesting schedule recommendation
- Meeting/time commitment expectations
- Compare: formal advisor vs. informal mentor vs. paid consultant

****3. Operating Model****

- Meeting cadence and format
- How to make advisor meetings productive (not just status updates)
- Template agenda for a 60-minute advisory session
- How to track and follow up on advisor commitments

****4. Recruitment Approach****

- How to identify potential advisors
- Cold outreach template that actually works
- What to say in the first meeting
- When to make the formal ask vs. keep it informal

****5. Agreement Template Outline****

- Key terms to include in an advisor agreement
- Red flags in advisor arrangements

Pro tip: The best advisors give you one thing you can't get elsewhere — a warm intro, a specific skill transfer, or a credibility boost with a specific audience. Define what you need before you recruit.

24. Churn Analysis & Retention Plan

When to use: When churn is too high and you need a structured approach to fix it.

Prompt:

Analyze churn and build a retention plan for [PRODUCT/SERVICE].

Current metrics:

- Monthly churn rate: [X]%
- Annual churn rate: [X]%
- Average customer lifetime: [X months]
- Top reasons customers cancel (if known): [LIST]
- NPS or satisfaction score (if known): [SCORE]

Analyze:

****1. Churn Diagnosis****

- Is this churn rate normal for our category? What's the benchmark?
- Estimate the revenue impact: At [X]% churn, we lose \$[Y] per year
- If we reduced churn by 1 percentage point, what's the LTV impact?

****2. Churn Segmentation****

Break churn into categories and prioritize:

- Involuntary churn (failed payments) — usually 20–40% of total churn
- Early churn (< 30 days) — onboarding problem
- Mid-lifecycle churn (30–180 days) — value delivery problem
- Late churn (180+ days) — competitive or needs-change problem

****3. Retention Playbook****

For each churn category, provide 3–5 specific interventions:

- What to implement
- Expected impact on churn rate
- Effort to implement (hours/days/weeks)
- Priority ranking

****4. Early Warning System****

- 5 behavioral signals that predict churn before it happens
- For each signal: what it looks like in data, when to trigger an intervention, what the intervention should be

****5. Win-Back Campaign****

- Email sequence for recently churned customers (3 emails)
- Offer strategy that doesn't cheapen the brand

Pro tip: Fix involuntary churn first — it's the easiest win. Smart dunning emails and payment retry logic can recover 20–40% of failed-payment churn with minimal effort.

25. Regulatory Compliance Checklist

When to use: When launching in a regulated industry or expanding to new markets with compliance requirements.

Prompt:

Create a regulatory compliance checklist for [BUSINESS TYPE] operating in [JURISDICTION/MARKET].

Business context: [DESCRIBE WHAT YOU DO, WHAT DATA YOU HANDLE, WHO YOUR CUSTOMERS ARE]

Build a compliance framework covering:

****1. Data & Privacy****

- What regulations apply (GDPR, CCPA, HIPAA, SOC 2, etc.)
- Specific requirements for each
- Checklist of actions to become compliant
- Estimated timeline and cost for each

****2. Industry-Specific Regulations****

- What licenses, certifications, or registrations we need
- Where to apply and expected timelines
- Ongoing reporting or renewal requirements

****3. Employment & Labor****

- If we have employees in [LOCATIONS], what do we need?
- Contractor vs. employee classification risks
- Required policies and documentation

****4. Financial & Tax****

- Sales tax / VAT collection obligations
- Payment processing compliance (PCI-DSS)
- Financial reporting requirements

****5. Priority Matrix****

| Requirement | Risk if Non-Compliant | Effort | Deadline | Status |
Sort by risk level.

****6. Recommended First Steps****

- What to do this week
- What to do this month
- What to hire a lawyer for (don't DIY these)

Pro tip: This gives you a roadmap, not legal advice. Use it to have a smarter (and cheaper) conversation with your actual lawyer. Walking in prepared saves billable hours.

26. Annual Strategic Planning Framework

When to use: During annual planning season to set direction for the coming year.

Prompt:

Facilitate an annual strategic planning process for [COMPANY].

Year in review:

- Revenue: started at \$[X], ended at \$[Y]
- Key wins: [LIST 3-5]
- Key misses: [LIST 3-5]
- Team: started at [X], ended at [Y]
- Biggest lesson learned: [ONE SENTENCE]

For the coming year, help me build:

****1. Strategic Narrative****

Write a 1-paragraph description of where the company will be in 12 months if everything goes right. Be specific – numbers, customers, capabilities.

****2. Annual Priorities (max 3)****

For each priority:

- Why this matters more than other things
- What "done" looks like (measurable outcome)
- Biggest risk to achieving it
- Resources required

****3. What We're Saying No To****

List 5 things we could do but WON'T do this year. For each, explain why.

****4. Quarterly Breakdown****

| Quarter | Theme | Key Milestones | Key Hires | Budget Allocation |

****5. Bets & Experiments****

- 2 "big bets" that could be transformative but aren't guaranteed
- 3 "small experiments" to run in the first half

****6. Annual Calendar****

Key dates: board meetings, planning reviews, launch windows, hiring deadlines, fundraising timing.

Pro tip: The “What We’re Saying No To” list is the hardest and most valuable part. A strategy without explicit trade-offs isn’t a strategy — it’s a wish list.

27. Customer Discovery Interview Script

When to use: When validating a product idea, entering a new market, or trying to deeply understand customer needs.

Prompt:

Create a customer discovery interview script for exploring [PROBLEM/OPPORTUNITY].

Target interviewee: [ROLE/PERSONA]

What we're trying to learn: [HYPOTHESIS WE'RE TESTING]

Build a 30-minute interview script following the "Mom Test" principles (no leading questions, no hypotheticals, focus on past behavior):

****Opening (2 minutes)****

- How to set context without biasing responses
- Exact words to say

****Part 1: Understanding Their World (10 minutes)****

- 5 open-ended questions about their current workflow/situation
- For each: what we're really trying to learn, and follow-up probes if they give short answers

****Part 2: Problem Exploration (10 minutes)****

- 5 questions about the specific pain point
- How to dig into severity, frequency, and current workarounds
- Questions that reveal willingness to pay (without asking "would you pay?")

****Part 3: Solution Direction (5 minutes)****

- How to describe the concept without selling
- 3 reaction-testing questions
- How to test pricing sensitivity without anchoring

****Closing (3 minutes)****

- How to ask for referrals to other people to interview
- How to leave the door open for follow-up

****After the Interview:****

- Scoring rubric: How to rate this interview (strong signal / weak signal / noise)
- Template for capturing notes within 10 minutes of hanging up
- Pattern recognition: After [X] interviews, look for these clusters

Pro tip: If every interviewee agrees with your idea enthusiastically, you’re asking leading questions. Genuine discovery should surprise you at least 30% of the time.

28. Product Roadmap Builder

When to use: When creating or updating a product roadmap that balances customer needs, business goals, and technical debt.

Prompt:

Build a product roadmap for [PRODUCT] for the next [6/12] months.

Current state:

- Product stage: [MVP / GROWTH / MATURE]
- Key features today: [LIST]
- Top customer requests: [LIST WITH APPROXIMATE DEMAND]
- Technical debt items: [LIST WITH SEVERITY]
- Business goals: [LIST TOP 3]

Create a roadmap with:

****1. Prioritization Framework****

Score each potential item using RICE:

- Reach: How many customers does this affect?
- Impact: How much does it move the needle? (1-3)
- Confidence: How sure are we this will work? (%)
- Effort: Person-weeks to build

****2. Roadmap by Quarter****

For each quarter:

- Theme (one phrase that describes the quarter's focus)
- 2-3 major features (with RICE scores)
- 1 technical debt item (always pay down some debt)
- 1 experiment or learning initiative
- Dependencies and risks

****3. Now / Next / Later View****

- NOW (in progress): [ITEMS]
- NEXT (committed, next quarter): [ITEMS]
- LATER (planned but flexible): [ITEMS]
- ICE BOX (good ideas, not prioritized): [ITEMS]

****4. What We're NOT Building (and why)****

- 5 commonly requested features we're intentionally deferring

****5. Communication Plan****

- How to share this roadmap with customers without over-promising
- Internal alignment: how to keep the team focused when shiny objects appear

Pro tip: Never put dates on external roadmaps — use “Now / Next / Later” instead. It sets expectations without creating contracts you can’t keep.

29. Vendor Selection Matrix

When to use: When choosing between multiple vendors, tools, or platforms for a business-critical decision.

Prompt:

Create a vendor selection matrix for choosing a [TYPE OF SOLUTION – e.g., CRM, payment processor, cloud hosting].

Our requirements:

- Must-haves: [LIST]
- Nice-to-haves: [LIST]
- Budget: \$[RANGE]/month
- Team size using this: [NUMBER]
- Integration needs: [LIST EXISTING TOOLS]

Vendors to evaluate: [VENDOR 1, VENDOR 2, VENDOR 3] (or suggest 4-5 if I'm not sure)

****Evaluation Matrix:****

| Criteria | Weight (1-5) | Vendor 1 | Vendor 2 | Vendor 3 |

Categories to evaluate:

- Core functionality fit (does it do what we need?)

- Ease of use / learning curve
- Pricing (total cost including hidden fees)
- Integration capabilities
- Scalability (will it work when we 10x?)
- Support & documentation quality
- Security & compliance
- Vendor stability (are they going to be around in 3 years?)
- Migration difficulty (how hard is it to switch away?)

****Weighted Total Score for each vendor****

****Recommendation:****

- Best overall pick and why
- Best for budget-constrained teams
- Best for scaling teams
- Red flags or concerns for each option
- Suggested trial/POC approach before committing

Pro tip: Always evaluate “migration difficulty” — the cheapest vendor is the most expensive one if you’re locked in forever. Prioritize data portability.

30. Revenue Diversification Strategy

When to use: When over-reliant on a single revenue stream, customer, or channel.

Prompt:

Analyze revenue concentration risk and build a diversification strategy for [BUSINESS].

Current revenue breakdown:

- Revenue stream 1: [DESCRIPTION] – [PERCENTAGE] of total
- Revenue stream 2: [DESCRIPTION] – [PERCENTAGE] of total
- Top customer concentration: Top 3 customers = [X]% of revenue
- Channel concentration: [X]% comes from [SINGLE CHANNEL]

****1. Risk Assessment****

- Revenue Herfindahl Index (concentration score)
- What happens if we lose our top customer?
- What happens if [primary channel] disappears tomorrow?
- Industry benchmarks for healthy diversification

****2. New Revenue Stream Ideas**** (5–7 options)

For each:

- What it is
- Revenue potential (Year 1, Year 3)
- Effort to launch
- Synergy with existing business
- Time to first dollar

****3. Prioritized Plan****

Rank the options by: (Revenue potential × Probability of success) / Effort

Pick the top 2–3 to pursue.

****4. 90-Day Diversification Roadmap****

- Month 1: Validate [Stream A] – specific experiments
- Month 2: Build [Stream A] MVP, validate [Stream B]
- Month 3: Launch [Stream A], build [Stream B] MVP

****5. Guardrails****

- How to diversify without defocusing the core business
- When diversification becomes distraction – warning signs

Pro tip: Diversify from strength, not desperation. The best new revenue streams leverage your existing customers, distribution, or capabilities — they don’t require building everything from scratch.

31. IP & Competitive Moat Assessment

When to use: When evaluating or strengthening your competitive advantages and defensibility.

Prompt:

Assess the competitive moat for [COMPANY/PRODUCT] and identify how to strengthen it.

Current potential moat sources:

- Technology/IP: [DESCRIBE – proprietary algorithms, patents, etc.]
- Data: [WHAT UNIQUE DATA DO YOU HAVE?]
- Network effects: [DO MORE USERS MAKE THE PRODUCT BETTER?]
- Switching costs: [HOW PAINFUL IS IT FOR CUSTOMERS TO LEAVE?]
- Brand: [WHAT BRAND EQUITY EXISTS?]
- Economies of scale: [COST ADVANTAGES FROM SIZE?]
- Regulatory: [LICENSES, CERTIFICATIONS, COMPLIANCE BARRIERS?]

For each moat source:

1. Current strength: None / Emerging / Moderate / Strong
2. How a well-funded competitor could attack it
3. Specific actions to strengthen it in the next 12 months
4. Investment required (time, money, people)

****Overall Moat Score:**** Weak / Moderate / Strong / Formidable

****Primary Moat:**** The one we should invest most heavily in

****Moat-Building Roadmap:**** Quarter-by-quarter plan to strengthen defensibility

****Honest Assessment:**** What would it cost and how long would it take for a well-funded competitor to replicate what we have today?

Pro tip: If the honest answer to “how long to replicate” is “a few months with enough money,” you don’t have a moat yet — you have a head start. Head starts are fine, but plan accordingly.

32. Team Structure & Org Design

When to use: When your team is growing and you need to design or redesign the organizational structure.

Prompt:

Design an organizational structure for [COMPANY] as we grow from [CURRENT SIZE] to [TARGET SIZE] people.

Current setup:

- Team: [LIST CURRENT ROLES]
- Reporting: [DESCRIBE CURRENT STRUCTURE – flat, functional, etc.]
- Pain points: [WHAT'S BREAKING – communication, decision speed, unclear ownership, etc.]

Design:

****1. Recommended Org Structure****

- Org chart with roles and reporting lines
- Rationale for this structure at this stage
- Span of control for each manager

****2. Next 5 Hires (in priority order)****

For each: Role, Why now, Impact on org structure, Approximate cost

****3. Career Ladders****

For key functions (engineering, sales, etc.):

- Junior → Mid → Senior → Lead → Director
- What changes at each level (scope, responsibility, expectations)

****4. Decision Rights Framework****

- Who can make what decisions without approval
- What requires team input vs. manager decision vs. executive decision
- How to avoid bottlenecks while maintaining quality

****5. Communication Architecture****

- Required meetings (weekly, monthly, quarterly) – purpose, attendees, duration

- How information flows between teams
- Tools and channels for each type of communication

Pro tip: Hire the role that will cause the most pain if left unfilled for another 3 months. That's usually not the most exciting role — it's the load-bearing one.

33. Due Diligence Preparation Kit

When to use: When preparing for investor due diligence, an acquisition offer, or a major partnership.

Prompt:

Create a due diligence preparation checklist for [COMPANY] preparing for [FUNDRAISE / ACQUISITION / MAJOR PARTNERSHIP].

Build a virtual data room structure with these sections:

1. Corporate Documents

- What's needed, where to find it, priority

2. Financial Information

- Documents needed (P&L, balance sheet, cash flow, projections)
- How far back
- Level of detail expected

3. Customer & Revenue Data

- Cohort analysis requirements
- Customer concentration data
- Churn and retention data
- Contract summaries

4. Legal

- IP ownership documentation
- Employee agreements
- Customer contracts (key terms)
- Pending or potential litigation

5. Technology

- Architecture documentation
- Security posture
- Technical debt honest assessment
- Key dependencies and bus factor risks

6. Team

- Org chart
- Key person risk assessment
- Compensation and equity summary
- Open headcount and recruiting pipeline

For each item:

| Document | Status (Have / Need / N/A) | Owner | Deadline | Notes |

Common Gotchas:

List 10 things that frequently derail due diligence and how to proactively address them.

Pro tip: Start organizing your data room BEFORE you need it. Companies that can produce clean documentation quickly signal operational excellence — and that alone improves deal terms.

34. Startup Metrics Dashboard Design

When to use: When defining which metrics to track and how to build your reporting cadence.

Prompt:

Design a metrics dashboard for [COMPANY TYPE – e.g., B2B SaaS, marketplace, e-commerce].

Stage: [PRE-PRODUCT-MARKET-FIT / GROWTH / SCALE]

Business model: [SUBSCRIPTION / TRANSACTION / USAGE / AD-SUPPORTED]

****1. North Star Metric****

- What is the ONE metric that best represents value delivery to customers?
- Why this metric and not others
- How it's calculated
- Target for next quarter

****2. Metric Hierarchy****

Organize into three tiers:

****Tier 1: Board-Level**** (5–7 metrics, reviewed monthly)

| Metric | Definition | Current | Target | Trend |

****Tier 2: Team-Level**** (10–15 metrics, reviewed weekly)

| Metric | Owner | Current | Target | Action if off-track |

****Tier 3: Diagnostic**** (reviewed when something's wrong)

- List 10–15 metrics you only dig into when a Tier 1/2 metric is off

****3. Alerting Rules****

For each Tier 1 metric:

- Green: [range]
- Yellow: [range] – review at weekly meeting
- Red: [range] – same-day investigation required

****4. Reporting Cadence****

- Daily: What to check (2 min)
- Weekly: Team review format (30 min)
- Monthly: Board/investor update (what to include)
- Quarterly: Deep dive (what analysis to run)

****5. Tool Recommendations****

Based on our stage and budget, suggest the simplest stack to track all this.

Pro tip: If you're not acting on a metric, stop tracking it. Dashboards should drive decisions, not decorate monitors.

35. Cost-Benefit Analysis Template

When to use: When evaluating any significant business investment or initiative.

Prompt:

Conduct a cost-benefit analysis for [INITIATIVE/INVESTMENT].

What we're considering: [DESCRIBE IN 3–5 SENTENCES]

Time horizon: [MONTHS OR YEARS]

Discount rate (if applicable): [X]%

****COSTS – be comprehensive:****

1. Direct costs (money spent)
 - One-time costs: [LIST WITH ESTIMATES]
 - Recurring costs: [LIST WITH MONTHLY ESTIMATES]
2. Indirect costs
 - Opportunity cost: what else could we do with this budget/time?
 - Team distraction: how many person-hours will this consume?
 - Risk costs: what's the cost if this fails? (probability × impact)
3. Hidden costs people usually forget
 - Training, migration, maintenance, support, technical debt

****BENEFITS – be specific and quantifiable:****

1. Revenue impact (be conservative)
2. Cost savings (be specific)

3. Strategic value (harder to quantify – describe qualitatively)
4. Risk reduction (what bad outcomes does this prevent?)
5. Optionality (what future possibilities does this create?)

****Analysis:****

- Net Present Value (NPV) over [time horizon]
- Payback period
- ROI percentage
- Break-even point (what has to be true for benefits > costs?)

****Sensitivity Analysis:****

- Best case / Base case / Worst case
- What single variable has the biggest impact on the outcome?

****Recommendation:**** Go / No-Go / Conditional (with specific conditions)

Pro tip: Force yourself to quantify the opportunity cost — “we could spend this same \$50K and 3 months on [ALTERNATIVE].” That’s the real comparison, not “do this vs. do nothing.”

36. Partnership Deal Structure

When to use: When structuring a business deal, partnership agreement, or revenue-sharing arrangement.

Prompt:

Structure a deal between [YOUR COMPANY] and [PARTNER] for [PURPOSE OF DEAL].

Context:

- What we bring: [DESCRIBE]
- What they bring: [DESCRIBE]
- Goal of the partnership: [DESCRIBE]
- Duration: [PROPOSED TERM]

Design the deal structure:

****1. Revenue/Value Split Options****

Present 3 options ranging from simple to complex:

- Option A: Simple split (e.g., X/Y revenue share)
- Option B: Tiered structure (different rates at different volumes)
- Option C: Complex structure (base + performance bonuses + equity)

For each: Pros, cons, and when it's appropriate.

****2. Key Terms to Negotiate****

- Exclusivity (should either side be exclusive? Pros/cons)
- Termination rights (how either party can exit)
- IP ownership (who owns what's created together)
- Performance minimums (what happens if one side underperforms)
- Non-compete/non-solicit provisions
- Liability and indemnification

****3. Success Metrics****

- How we'll measure if this partnership is working
- Review cadence
- Renegotiation triggers

****4. Protection Clauses****

- 5 scenarios that could go wrong and the contractual protection for each

****5. Negotiation Strategy****

- Our BATNA (best alternative to a negotiated agreement)
- Their likely BATNA
- Where to anchor, where to concede
- Walk-away point

Pro tip: Always define exit terms upfront — when both parties are friendly and optimistic. It’s 100x harder to negotiate an exit when the relationship has soured.

37. Market Entry Strategy (New Geography)

When to use: When expanding to a new country, region, or market segment.

Prompt:

Create a market entry strategy for [COMPANY/PRODUCT] entering [NEW MARKET/GEOGRAPHY].

Current market:

- Where we operate now: [MARKET]
- What's working: [DESCRIBE]
- Revenue in current market: \$[AMOUNT]

Target market:

- Where we want to expand: [NEW MARKET]
- Why now: [REASONING]
- What we know about this market: [DETAILS]

Analyze:

****1. Market Assessment****

- Market size and growth rate
- Key differences from our current market (cultural, regulatory, competitive, behavioral)
- Top 3 competitors already serving this market
- Barriers to entry

****2. Entry Strategy Options****

Compare at least 3 approaches:

- Direct entry (build our own presence)
- Partnership/distribution (partner with local player)
- Acquisition (buy an existing player)

For each: cost, speed, risk, control level

****3. Localization Requirements****

- Product changes needed
- Pricing adjustments (purchasing power, local pricing norms)
- Legal/regulatory compliance
- Language, cultural, and UX considerations
- Payment methods and currency handling

****4. Go-to-Market in New Market****

- First 100 customers: how do we get them?
- Local team needs: who to hire first
- Marketing channels that work in this market
- Launch timeline: 90-day plan

****5. Success Criteria & Kill Switch****

- Metrics we must hit in 6 months to continue investment
- Total budget allocated before requiring positive signal
- What "failure" looks like and when to pull out

Pro tip: Don't assume what works in your home market will translate. Customer discovery in the new market is not optional — it's the first thing you should do.

38. Operating Cadence Design

When to use: When setting up the rhythm of recurring meetings, reviews, and planning cycles.

Prompt:

Design an operating cadence for [COMPANY] with [X] employees across [TEAMS/FUNCTIONS].

Current problems with how we operate:

- [LIST - e.g., too many meetings, decisions take too long, teams misaligned, no accountability]

Create an operating cadence that covers:

****Daily****

- Who meets, for how long, about what
- Format: standup, async update, or none
- Tool used

****Weekly****

- Team meetings: purpose, agenda template, duration
- Leadership sync: what to cover, decision-making format
- Metrics review: who looks at what

****Monthly****

- Business review: agenda, attendees, duration
- 1-on-1s: structure, talking points template
- Customer review: what to analyze

****Quarterly****

- Planning: process, timeline, who's involved
- OKR setting/review
- Team retrospective format
- All-hands meeting: agenda template

****Annually****

- Strategic planning session
- Budget process
- Team offsite (if applicable)

****Rules of Engagement:****

- When to have a meeting vs. send a message
- Maximum meeting load per person per week
- Required meeting hygiene (agendas, notes, action items)
- "No meeting" blocks that are protected

For each meeting, specify: Purpose (1 sentence), Owner, Attendees, Duration, Frequency, Agenda template, Output.

Pro tip: Cap total meeting time at 40% of the week for makers (engineers, designers) and 60% for managers. Track it for a month — most companies are shocked at the real number.

39. Fundraising Strategy & Timeline

When to use: When planning a fundraising round — timing, targeting, and preparation.

Prompt:

Build a fundraising strategy for [COMPANY] raising a [ROUND – Seed, Series A, etc.].

Company status:

- MRR: \$[AMOUNT]
- Growth rate: [X]% MoM
- Runway remaining: [X] months
- Team: [SIZE AND KEY ROLES]
- Previous funding: [AMOUNT FROM WHOM]
- Target raise: \$[AMOUNT]
- Target valuation range: \$[AMOUNT]

Create:

****1. Fundraising Readiness Checklist****

- 10 things to have ready before starting
- Current gaps to close and timeline for each

****2. Investor Targeting****

- Profile of ideal investor (stage focus, sector, check size, value-add)
- How to build a list of 50–80 target investors
- Tier system: Tier 1 (dream investors), Tier 2 (strong fits), Tier 3 (backup)

- Sequencing: who to pitch first (hint: NOT your Tier 1)

****3. Timeline (Week by Week)****

- Weeks 1-2: Preparation and materials
- Weeks 3-4: Warm introductions and first meetings
- Weeks 5-8: Partner meetings and deep dives
- Weeks 9-10: Term sheet negotiation
- Weeks 11-12: Close

****4. Materials Needed****

- Teaser deck (5 slides for email)
- Full deck (12-15 slides for meetings)
- Financial model
- Data room contents

****5. Process Management****

- How to create FOMO and urgency ethically
- How to run a parallel process (multiple investors simultaneously)
- Red flags in term sheets
- When to say no to money

Pro tip: Start fundraising when you don't need money — you negotiate from strength. If you have 3 months of runway left, you're not fundraising; you're fire-selling.

40. Business Continuity & Contingency Plan

When to use: When preparing for worst-case scenarios that could disrupt your business.

Prompt:

Create a business continuity plan for [COMPANY].

Business context:

- Critical systems: [LIST – e.g., payment processing, customer database, production servers]
- Key person dependencies: [WHO KNOWS WHAT ONLY THEY KNOW?]
- Revenue model: [HOW DO YOU MAKE MONEY?]
- Customer base: [SIZE AND DEPENDENCY LEVEL]

Plan for these scenarios:

****1. Key Person Unavailable** (founder, CTO, key engineer)**

- For each key person: What breaks if they're gone for 30 days?
- Knowledge transfer checklist
- Succession plan (even informal)

****2. Technical Disaster****

- Server/cloud outage
- Data breach
- Ransomware attack
- Recovery procedures, RTOs, and RPOs

****3. Financial Crisis****

- Largest customer churns suddenly
- Revenue drops 50% in one month
- Emergency budget (what stays, what goes)

****4. Market Disruption****

- Major competitor enters with 10x resources
- Regulation changes make current model illegal/difficult
- Technology shift makes current approach obsolete

****5. For Each Scenario:****

Scenario	Probability	Impact	Response Plan	Owner	Last Reviewed

****6. Emergency Contacts & Procedures****

- Who to call first for each type of emergency

- Decision authority when key leaders are unavailable
- Communication templates for customers, team, investors
- "Break glass" procedures (accounts, access, passwords)

Review and update this plan every [QUARTER/6 MONTHS].

Pro tip: The most likely disaster is the most boring one: your key engineer quits. Document everything, cross-train, and ensure no single person is a single point of failure.

2. Marketing & Sales

41. Email Welcome Sequence (SaaS)

When to use: When a new user signs up for your product and you need to onboard them via email.

Prompt:

Write a 7-email welcome sequence for [PRODUCT NAME], a [BRIEF DESCRIPTION] targeting [AUDIENCE].

Price: [FREE TRIAL / FREEMIUM / PAID]

Key activation event: [THE THING USERS MUST DO TO GET VALUE – e.g., "connect their first data source"]

Average time to activation: [X DAYS]

Main competitor users might compare us to: [COMPETITOR]

For each email, provide:

- Send timing (e.g., "immediately," "Day 2," etc.)
- Subject line (and one A/B variant)
- Preview text
- Full body copy (keep each email under 150 words)
- Single CTA (button text + where it links)
- Goal of this email (what action should they take?)

Sequence structure:

1. ****Welcome + Quick Win**** – get them to do ONE thing right now
2. ****Value Story**** – share a specific customer result (with numbers)
3. ****Activation Nudge**** – help them complete the key activation event
4. ****Feature Spotlight**** – highlight a feature they probably haven't found
5. ****Social Proof**** – testimonial or case study
6. ****Objection Handler**** – address the #1 reason people don't convert
7. ****Upgrade/Convert CTA**** – clear, value-based ask to upgrade or commit

Tone: [FRIENDLY / PROFESSIONAL / CASUAL] – no corporate fluff, write like a human.

Pro tip: The single most important email is #1 — it has 3-5x the open rate of every other email. Use it to drive one specific action, not to list every feature.

42. Cold Outreach Email (B2B Sales)

When to use: When writing cold emails to prospects who don't know you yet.

Prompt:

Write 5 variations of a cold outreach email for [PRODUCT/SERVICE] targeting [JOB TITLE] at [COMPANY TYPE].

What we sell: [ONE SENTENCE]

Key result we deliver: [SPECIFIC OUTCOME WITH NUMBERS IF POSSIBLE]

Price range: [APPROXIMATE]

Best customer example: [COMPANY NAME/TYPE AND RESULT THEY GOT]

Requirements for each email:

- Subject line under 6 words (and one variant)
- Body under 85 words
- No "I hope this email finds you well"
- No "I'd love to pick your brain"
- Opens with something about THEM, not about US
- Includes one specific, relevant data point or observation
- Single, low-friction CTA (not "let's hop on a 30-minute call" – something easier)
- P.S. line that adds value

Write these 5 variations:

1. The "observation" email – notice something specific about their company
2. The "mutual connection" email – reference a shared connection or community
3. The "trigger event" email – based on a recent event (funding, hire, launch)
4. The "pain point" email – lead with their problem, not your solution
5. The "case study" email – open with a result you got for someone similar

Also provide: Follow-up email (sent 3 days later if no reply, under 40 words).

Pro tip: The follow-up email has a higher response rate than the first email. Keep it dead simple: “Just bumping this up. Worth a quick look?” works better than another long pitch.

43. Landing Page Copy Framework

When to use: When writing copy for a product landing page or sales page.

Prompt:

Write complete landing page copy for [PRODUCT/SERVICE].

Product: [WHAT IT DOES]

Target audience: [WHO IT'S FOR]

Price: [AMOUNT AND MODEL]

Key differentiator: [WHAT MAKES IT DIFFERENT FROM ALTERNATIVES]

Main competitor: [WHO THEY'D USE INSTEAD]

Top 3 objections people have before buying: [LIST]

Write copy for each section of the page:

****1. Hero Section****

- Headline (under 10 words, benefit-focused)
- Subheadline (one sentence expanding on the headline)
- CTA button text
- Social proof micro-element (e.g., "Join 2,000+ marketers" or star rating)

****2. Problem Section****

- 3–4 pain points written from the customer's perspective ("You know that feeling when...")
- Each one vivid and specific, not generic

****3. Solution Section****

- How the product solves each pain point
- 3 key features, each with: Feature name, one-line benefit, supporting detail

****4. Social Proof Section****

- 3 testimonial templates (with placeholders – I'll fill in real quotes)
- Logos bar description
- Key metric callout (e.g., "Saved 10,000+ hours")

****5. How It Works****

- 3-step process (simple, visual, removes complexity fear)

****6. Pricing Section****

- Price presentation with anchoring
- What's included (bullet list)
- Guarantee/risk reversal statement

****7. FAQ Section****

- 6 questions that overcome buying objections
- Answers that are honest and concise

****8. Final CTA Section****

- Closing headline (different from hero)
- Final CTA button
- Urgency or scarcity element (if authentic)

Pro tip: Read your headline to 5 people and ask “What do you think this product does?” If they can’t answer clearly, rewrite it. Clarity beats cleverness every time.

44. SEO Content Brief Generator

When to use: When planning a blog post or article optimized for search engine rankings.

Prompt:

Create a comprehensive SEO content brief for the keyword: "[TARGET KEYWORD]"

****1. Keyword Research****

- Primary keyword: [TARGET]
- Search intent: [INFORMATIONAL / COMMERCIAL / TRANSACTIONAL / NAVIGATIONAL]
- 10 related secondary keywords to include naturally
- 5 long-tail variations
- 5 questions people search for related to this topic

****2. Competitive Analysis****

- What the top 3 ranking articles cover (based on what you know about this topic)
- Content gaps they miss that we can fill
- Average word count of top results (estimate)
- Content format that works best (listicle, guide, comparison, tutorial)

****3. Content Outline****

- Suggested title (with primary keyword, under 60 characters)
- Meta description (with keyword, under 155 characters, includes a reason to click)
- H1, H2, H3 structure with suggested headings
- For each H2 section: 2-3 sentences describing what to cover
- Suggested word count per section

****4. On-Page SEO Checklist****

- Internal linking opportunities (suggest 3-5 pages to link to)
- External linking (suggest 2-3 authoritative sources to reference)
- Image suggestions (with alt text recommendations)
- Schema markup recommendation

****5. Content Differentiation****

- Our unique angle (how to make this not just another generic article)
- Original data, framework, or insight to include
- Expert quote to seek out

****6. Distribution Plan****

- 3 ways to promote this content after publishing
- Social media post drafts for the article (Twitter, LinkedIn)

Pro tip: The #1 factor in ranking isn’t keyword density — it’s answering the searcher’s question better than anyone else. Write for the human first, optimize for the robot second.

45. Social Media Content Calendar

When to use: When planning a month of social media content across platforms.

Prompt:

Create a 30-day social media content calendar for [BRAND/PRODUCT] on [PLATFORMS – e.g., Twitter, LinkedIn, Instagram].

Brand voice: [DESCRIBE – e.g., "witty and authoritative" or "warm and educational"]

Target audience: [WHO]

Goals: [AWARENESS / ENGAGEMENT / LEADS / SALES]

Posting frequency: [X posts per day/week per platform]

Content pillars (topics we rotate between): [LIST 4–5 – e.g., product tips, industry insights, behind-the-scenes, customer stories, thought leadership]

For each day, provide:

| Day | Platform | Content Pillar | Post Type | Copy (ready to post) | Hashtags | Best Time to Post |

Post types to include across the month:

- 8 educational/value posts (tips, how-tos, frameworks)
- 6 engagement posts (questions, polls, hot takes)
- 5 social proof posts (testimonials, results, milestones)
- 4 behind-the-scenes posts (team, process, culture)
- 4 promotional posts (product, offers, launches)
- 3 trending/timely posts (leave topic flexible, provide format)

For each post, write the ACTUAL copy – not a description of what to write. Make it ready to copy-paste.

Also include:

- 5 "evergreen" posts that can be reused monthly
- 3 response templates for common comments
- Engagement strategy: 15 minutes/day – what to do (comment on X accounts, reply to Y mentions)

Pro tip: The 80/20 of social media: spend 20% creating content and 80% engaging with other people's content. The algorithm rewards conversations, not broadcasts.

46. Google Ads Campaign Builder

When to use: When setting up or optimizing a Google Ads search campaign.

Prompt:

Build a Google Ads search campaign for [PRODUCT/SERVICE].

Business: [WHAT YOU SELL]

Target customer: [WHO SEARCHES FOR THIS]

Monthly budget: \$[AMOUNT]

Target CPA: \$[AMOUNT]

Landing page URL: [URL]

Geographic targeting: [LOCATION]

Create:

****1. Campaign Structure****

- Campaign name and objective
- 3–4 Ad Groups, each targeting a different intent cluster
- For each Ad Group: theme, 8–10 keywords (mix of exact, phrase, broad match modified)

****2. Negative Keywords****

- 20 negative keywords to add immediately (competitors, free-seekers, irrelevant searches)

****3. Ad Copy****

For each Ad Group, write 3 Responsive Search Ads:

- 15 headlines (30 characters max each) – mix of benefit, feature, CTA, and social proof
- 4 descriptions (90 characters max each)
- Pin the most important headline to Position 1

****4. Ad Extensions****

- 4 sitelink extensions with descriptions
- 4 callout extensions
- 2 structured snippet extensions
- Call extension (if applicable)

****5. Bidding Strategy****

- Recommended bid strategy for this budget and goal
- Expected CPC range
- Daily budget allocation across ad groups
- When to switch from learning to optimization

****6. Optimization Schedule****

- Day 1-7: What to monitor, don't change anything
- Day 8-14: First optimizations to make
- Day 15-30: Scaling decisions
- Ongoing: Weekly optimization checklist (5 minutes)

Pro tip: Start with exact match keywords and a small budget. Prove your CPA works, then expand to broader match types. Most wasted ad spend comes from going broad too early.

47. Sales Script (Discovery Call)

When to use: When preparing for a B2B sales discovery call.

Prompt:

Write a discovery call script for selling [PRODUCT/SERVICE] to [TARGET BUYER ROLE].

Product: [WHAT IT DOES AND KEY BENEFIT]

Price range: [AMOUNT]

Typical sales cycle: [DAYS/WEEKS]

Common objections: [LIST TOP 3]

Ideal customer profile: [DESCRIBE]

Script structure (30 minutes total):

****Opening (3 minutes)****

- Exact opening line (builds rapport without wasting time)
- How to set the agenda and get buy-in for the conversation structure
- Permission-based frame: "Is it okay if I ask a few questions to see if this is even a fit?"

****Discovery Questions (15 minutes)****

Organized by category:

Situation questions (understand current state):

1. [Question] → What their answer reveals
2. [Question] → What their answer reveals

Problem questions (uncover pain):

3. [Question] → What their answer reveals
4. [Question] → What their answer reveals

Impact questions (quantify the cost of the problem):

5. [Question] → What their answer reveals
6. [Question] → What their answer reveals

****Transition to Solution (5 minutes)****

- How to bridge from their answers to your product
- "Based on what you've shared..." template
- Brief demo/explanation talking points (not a feature dump)

****Qualification Check (5 minutes)****

- Budget: How to ask without being awkward
- Authority: "Who else would be involved in this decision?"
- Need: Confirm the pain is real and urgent
- Timeline: "When would you ideally have this solved by?"

****Close & Next Steps (2 minutes)****

- How to propose the next step
- Handling "Let me think about it"
- Handling "Send me more info"
- Booking the next meeting on the call

****Objection Handling Guide:****

For each common objection: What they say → What they mean → How to respond

Pro tip: The best salespeople talk less than 40% of the time on discovery calls. Ask a question, then shut up. The silence after a question is where the gold is.

48. Lead Magnet Creator (Ebook/Guide)

When to use: When you need a free download to generate email subscribers or leads.

Prompt:

Create an outline and key content for a lead magnet titled "[TITLE]" for [TARGET AUDIENCE].

Purpose: Get [AUDIENCE] to give us their email in exchange for this guide.

Format: [PDF GUIDE / CHECKLIST / TEMPLATE / TOOLKIT]

Target length: [X] pages

Follow-up: After downloading, they'll enter our email sequence for [PRODUCT]

Create:

****1. Title Options**** (5 variations using proven formats)

- "The [Number] [Noun] [Audience] [Benefit]"
- "How to [Achieve Result] Without [Pain Point]"
- etc.

****2. Landing Page Copy for the Lead Magnet****

- Headline
- 3 bullet points of what they'll learn
- CTA button text
- Social proof element

****3. Complete Outline****

For each section:

- Section title
- Key points to cover (3-5 per section)
- One actionable takeaway
- Estimated length

****4. Write the First 3 Sections in Full****

(So I can see the voice and quality – I'll complete the rest)

****5. Design Brief****

- Visual style recommendation
- Key graphics or diagrams needed
- Suggested tool to design it (Canva, etc.)

****6. Distribution Plan****

- Where to promote it (5 specific channels)
- Social post promoting the lead magnet (ready to publish)
- Blog post topic that naturally leads to the lead magnet

Pro tip: The best lead magnets are specific and actionable, not comprehensive. “The 10-Minute SEO Audit Checklist” beats “The Complete Guide to SEO” because it promises a quick win.

49. Product Launch Email Sequence

When to use: When launching a new product, feature, or offer to your existing audience.

Prompt:

Write a 5-email launch sequence for [PRODUCT/FEATURE] launching on [DATE].

Product: [WHAT IT IS]

Price: [AMOUNT]

Target audience: [WHO'S ON THIS EMAIL LIST]

Key benefit: [ONE SENTENCE]

Launch offer: [DISCOUNT, BONUS, EARLY ACCESS – if any]

Scarcity element: [TIME-LIMITED, QUANTITY-LIMITED, or NONE]

Email sequence:

****Email 1: The Tease (3 days before launch)****

Build anticipation without revealing everything.

– Subject line + body + CTA (reply to join waitlist / save the date)

****Email 2: The Story (1 day before launch)****

Why we built this – the origin story. Make it personal.

– Subject line + body + CTA (get ready for tomorrow)

****Email 3: The Launch (Launch day)****

It's live. Clear value proposition, pricing, CTA.

– Subject line + body + CTA (buy now / start free trial)

****Email 4: Social Proof (Day 2)****

Show early results, testimonials, or engagement numbers.

– Subject line + body + CTA

****Email 5: Last Chance (Day 5–7)****

Closing the launch offer. Urgency, but not fake urgency.

– Subject line + body + CTA

For each email:

– Subject line (plus one A/B variant)

– Preview text

– Full body copy (under 200 words each)

– CTA button text

– Sending time recommendation

Overall launch goals:

– Open rate target: [X]%

– Click rate target: [X]%

– Conversion target: [X] sales / [X] signups

Pro tip: Email 3 (launch day) should go out early in the morning. Email 5 (last chance) at 6-8 PM. People buy at the beginning and end of windows, not the middle.

50. LinkedIn Thought Leadership Posts

When to use: When building authority on LinkedIn as a founder, executive, or expert.

Prompt:

Write 10 LinkedIn posts for [NAME], [TITLE] at [COMPANY], positioned as an expert in [TOPIC/INDUSTRY].

Audience: [WHO FOLLOWS/SHOULD FOLLOW THIS PERSON]

Goals: Build authority, generate inbound leads, grow following

Post types to include:

– 2 "contrarian take" posts (challenge conventional wisdom)

– 2 "lesson learned" posts (personal story with business insight)

– 2 "framework/mental model" posts (teach something useful)

– 2 "behind the scenes" posts (show the real work, not just results)

- 1 "data/insight" post (share an interesting observation with numbers)
- 1 "ask the audience" post (drive comments and engagement)

For each post:

- Hook (first line that makes people click "see more" – this is everything)
- Body (150–250 words, formatted for LinkedIn readability: short paragraphs, line breaks)
- Closing line or CTA (soft – no "buy my thing")
- 3 relevant hashtags
- Best day/time to post

Writing rules:

- First person, conversational
- No jargon unless your audience uses it daily
- Each post should stand alone (no "as I mentioned last week")
- Include specific numbers, names, or details – vagueness kills engagement
- End with either a question (drives comments) or a bold statement (drives shares)

Pro tip: The first line of a LinkedIn post determines 90% of its performance. Write 10 hook options for each post and pick the one that would make YOU stop scrolling.

51. A/B Test Hypothesis Generator

When to use: When planning conversion rate optimization tests for your website, emails, or ads.

Prompt:

Generate 10 high-impact A/B test hypotheses for [WEBSITE/PAGE/EMAIL/AD].

Current performance:

- Conversion rate: [X]%
- Traffic: [X] visitors/month
- Key drop-off point: [WHERE PEOPLE LEAVE]
- Audience: [WHO VISITS]

For each test hypothesis:

#	What to Test	Current Version	Proposed Variation	Expected Impact	Confidence

Structure each hypothesis as:

"Because we observed [DATA/BEHAVIOR], we believe that changing [ELEMENT] to [NEW VERSION] will [EXPECTED OUTCOME], which we'll measure by [METRIC]."

Prioritize using PIE framework:

- Potential: How much improvement is possible?
- Importance: How valuable is the traffic to this page?
- Ease: How easy is it to implement?

Group into:

****Quick Wins**** (implement in < 1 day, meaningful impact):

Tests 1–3

****Medium Effort**** (implement in 1–5 days, high potential):

Tests 4–7

****Big Bets**** (significant effort, potentially transformative):

Tests 8–10

For the top 3 tests, also provide:

- Exact copy/design changes to make
- Sample size calculator inputs
- How long to run before calling a winner
- What to do with the results regardless of outcome

Pro tip: Test one variable at a time. If you change the headline, button color, and CTA text simultaneously, you'll never know what actually made the difference.

52. Customer Case Study Writer

When to use: When turning a customer success story into a persuasive marketing asset.

Prompt:

Write a customer case study for [CUSTOMER NAME/TYPE] who uses [YOUR PRODUCT].

Information to work with:

- Customer background: [INDUSTRY, SIZE, WHAT THEY DO]
- Problem they had before: [DESCRIBE]
- Why they chose us: [WHAT TIPPED THE DECISION]
- How they use our product: [SPECIFIC USE CASE]
- Results achieved: [SPECIFIC NUMBERS/OUTCOMES]
- Quote from customer (or paraphrase to turn into a quote): [WHAT THEY SAID]

Write three versions:

****Version 1: Full Case Study (800–1000 words)****

Structure: Challenge → Solution → Results → Quote

Use the "Before/After/Bridge" framework

Include a sidebar with key metrics

End with a subtle CTA

****Version 2: One-Page Summary (250 words)****

For sales decks, PDFs, or quick reference

Key metrics highlighted

Best quote pulled out

****Version 3: Social Proof Snippets****

- 1 testimonial quote (2–3 sentences, ready for the website)
- 1 tweet/social post about this customer story
- 1 email snippet (for sales outreach: "One of our customers, [similar company], achieved...")
- 1 slide for a pitch deck (headline + 3 data points)

Design suggestions:

- What visual/chart would make the results pop?
- Before/after comparison format

Pro tip: Specific numbers are 10x more credible than vague claims. “Reduced processing time from 4 hours to 23 minutes” beats “dramatically improved efficiency” every time.

53. Referral Program Designer

When to use: When creating a customer referral or affiliate program.

Prompt:

Design a referral program for [PRODUCT/SERVICE].

Current metrics:

- Number of customers: [X]
- Average order value/MRR: \$[AMOUNT]
- Customer acquisition cost (other channels): \$[AMOUNT]
- NPS or satisfaction score: [IF KNOWN]
- Organic referral rate (current, if known): [X]%

Design:

****1. Program Structure****

Compare 3 models:

- Single-sided reward (only referrer gets rewarded)
- Double-sided reward (both referrer and referred get rewarded)
- Tiered/milestone rewards (rewards increase with more referrals)

Recommend the best model for our business and explain why.

****2. Reward Options****

- What to offer referrers (cash, credit, free months, swag – pros/cons of each)
- What to offer referred customers (discount, extended trial, bonus feature)
- Specific dollar amounts/percentages with math showing profitability

****3. Mechanics****

- How the referral link/code system works
- When rewards are triggered (after signup? After payment? After 30 days?)
- Anti-fraud measures
- Attribution and tracking

****4. Promotion Plan****

- When to ask for referrals (the optimal moment in the customer journey)
- In-app referral prompt copy
- Email asking for referrals (write the actual email)
- Social sharing templates

****5. Success Metrics****

- Program participation rate target
- Referral conversion rate target
- Cost per referred customer vs. other channels
- K-factor goal

Pro tip: The best time to ask for a referral is immediately after a customer experiences their first “aha moment” with your product — not after 30 days, not in a quarterly email. Strike when the delight is fresh.

54. Content Repurposing System

When to use: When you want to maximize the ROI of one piece of content across multiple channels.

Prompt:

Create a content repurposing plan for this source content:

Source: [BLOG POST / PODCAST EPISODE / WEBINAR / VIDEO]

Topic: [WHAT IT'S ABOUT]

Key points: [LIST 3-5 MAIN TAKEAWAYS]

Target audience: [WHO]

Platforms we're active on: [LIST]

From this ONE piece of content, create:

****1. Short-Form Written Content****

- 5 Twitter/X posts (each highlighting a different insight)
- 3 LinkedIn posts (different angles, longer format)
- 2 Instagram captions
- 1 email newsletter section

****2. Visual Content****

- 3 carousel slide concepts (for LinkedIn or Instagram)
 - Slide-by-slide copy for each carousel
- 2 quote graphic concepts (which quotes to pull, visual style)
- 1 infographic outline

****3. Long-Form Derivatives****

- 1 email that teaches the same concept to a different audience
- 1 guest post pitch angle for a different publication
- 1 "Part 2" or spin-off blog post idea

****4. Audio/Video****

- 3 short video script ideas (30-60 seconds each, for Reels/TikTok/Shorts)
- 1 podcast episode outline expanding on this topic
- Key soundbites to clip if the source is audio/video

****5. Distribution Calendar****

Spread these across 4 weeks so nothing overlaps:
| Week | Monday | Wednesday | Friday |
With specific content pieces assigned to each slot.

Pro tip: The rule of 7: most people need to encounter your message 7 times before it registers. Repurposing isn't lazy — it's how you actually get heard.

55. Email Re-Engagement Campaign

When to use: When a segment of your email list has gone cold and you want to win them back or clean the list.

Prompt:

Write a 4-email re-engagement sequence for subscribers who haven't opened or clicked in [X] days.

List context:

- Total cold subscribers: [NUMBER]
- They originally signed up for: [WHAT]
- Last engagement: [WHEN]
- Our product/offering now: [WHAT WE SELL]

Email sequence:

****Email 1: The "We Miss You" (Day 0)****

- Subject line: something that stands out in a crowded inbox
- Acknowledge the gap without guilt-tripping
- Offer something genuinely valuable (not a discount – value)
- CTA: single click to re-engage

****Email 2: The "Here's What You Missed" (Day 3)****

- Highlight 3 best things that happened since they went silent
- Make them feel FOMO, not obligation
- CTA: check out the most interesting update

****Email 3: The "Honest Question" (Day 7)****

- Ask directly: "Should we keep emailing you?"
- Give them options (stay, reduce frequency, unsubscribe)
- Make it easy and guilt-free

****Email 4: The "Breakup Email" (Day 14)****

- "We're removing you from our list tomorrow"
- Loss aversion trigger – this is the highest-performing email in re-engagement sequences
- One-click "Keep me subscribed" CTA
- If they don't click, actually remove them

For each email: Subject line (+ variant), preview text, full copy, CTA.

After the sequence: What to do with non-responders (remove from list – explain why this improves deliverability).

Pro tip: The “breakup email” (#4) typically gets the highest open rate of any email you’ll ever send. People respond to the fear of losing access more than any value proposition.

56. Competitive Positioning Statement

When to use: When you need to articulate why customers should choose you over alternatives.

Prompt:

Develop competitive positioning for [PRODUCT] against [COMPETITOR 1], [COMPETITOR 2], and [COMPETITOR 3].

Our product: [WHAT WE DO]

Our target customer: [WHO]

Our price: [AMOUNT]
Our key strength: [WHAT WE DO BEST]
Our key weakness: [WHAT WE'RE NOT GREAT AT – be honest]

Create:

****1. Positioning Statement****

"For [target customer] who [need], [product] is the [category] that [key benefit]. Unlike [primary alternative], we [key differentiator]."

****2. Competitive Battle Cards** (one per competitor)**

For each competitor:

- Their positioning: what they claim
- Their real strengths: what they actually do well
- Their weaknesses: where they fall short
- When we win against them: customer profile and scenario
- When we lose to them: customer profile and scenario
- Talk track: what to say when a prospect mentions them
- What NOT to say (don't trash talk – it backfires)
- Trap questions to ask: questions that highlight our advantage

****3. Objection Handling****

"Why should I choose you over [Competitor]?"

- Answer for each competitor (3–4 sentences each)

****4. Feature Comparison Table****

| Capability | Us | Comp 1 | Comp 2 | Comp 3 |

Mark ,  (partial),  for each.

****5. Positioning Do's and Don'ts****

- 5 messages that resonate with our target customer
- 5 messages that sound good but actually hurt us

Pro tip: Never trash competitors in sales calls — it makes you look insecure. Instead, ask questions that naturally reveal the competitor's weaknesses through the prospect's own experience.

57. Webinar/Event Promotion Campaign

When to use: When promoting an online event, webinar, or live session.

Prompt:

Create a complete promotion campaign for [EVENT NAME], a [WEBINAR/WORKSHOP/LIVE SESSION] on [TOPIC].

Details:

- Date/time: [WHEN]
- Duration: [HOW LONG]
- Speaker(s): [WHO]
- Target audience: [WHO]
- Registration page: [URL]
- Goal: [NUMBER] registrations

Create:

****1. Registration Page Copy****

- Headline
- 3 bullet points: "In this session, you'll learn..."
- Speaker bio (compelling, not résumé-style)
- Urgency element

****2. Email Promotion Sequence (3 emails)****

- Email 1: Announcement (2 weeks before)
 - Email 2: Value preview + social proof (1 week before)
 - Email 3: Last chance to register (day before)
- Full copy for each.

****3. Social Media Posts (8 posts total)****
– 3 pre-event posts (different angles)
– 2 day-of reminders
– 1 live-tweeting template
– 2 post-event posts (recap + replay link)

****4. Reminder Sequence for Registrants****
– 24 hours before: what to expect
– 1 hour before: here's your link
– 5 minutes before: we're starting!

****5. Post-Event Follow-Up****
– Email to attendees (with replay + resources)
– Email to no-shows (with replay + FOMO)
– Sales follow-up for hot leads (what signals to look for)

****6. Metrics to Track****
Registration rate, show-up rate, engagement during event, conversion to [next step].

Pro tip: Average webinar show-up rate is 40-50%. To hit your attendance goal, you need 2x that number in registrations. And the #1 driver of show-up rate? The 1-hour-before reminder email.

58. Product Description Writer (E-Commerce)

When to use: When writing product descriptions that sell for an online store.

Prompt:

Write a high-converting product description for [PRODUCT NAME].

Product details:
– What it is: [DESCRIBE]
– Price: \$[AMOUNT]
– Key features: [LIST 5-7]
– Key materials/specs: [LIST]
– Target buyer: [WHO BUYS THIS]
– Occasion/use case: [WHEN DO THEY BUY IT]
– Main competitor product: [WHAT THEY'D BUY INSTEAD]

Write:

****1. Headline****
Under 10 words. Benefit-first, not feature-first.

****2. Short Description (50 words)****
For product listing pages and quick previews.

****3. Full Description (150-250 words)****
– Open with the benefit/transformation, not specs
– Use sensory language
– Address the top buying objection
– Include social proof element
– End with confidence-building detail (guarantee, quality, craftsmanship)

****4. Bullet Points (5-7)****
Each one: "[Feature] – [Benefit]" or "[Feature] so you can [outcome]"

****5. SEO Elements****
– Page title (under 60 characters, with keyword)
– Meta description (under 155 characters)
– 5 keywords to target

****6. Cross-sell Copy****
– "Pairs well with..." recommendation
– "Customers also loved..." suggestion

****7. Urgency/Scarcity Copy**** (only if genuine)

- Stock level messaging
- Seasonal relevance

Pro tip: Read your description out loud. If it sounds like a spec sheet, rewrite it. The best product copy reads like a friend recommending something they love, not a manual.

59. Sales Objection Handler

When to use: When you need prepared responses for common sales objections.

Prompt:

Create an objection handling playbook for selling [PRODUCT/SERVICE] at [PRICE POINT] to [TARGET BUYER].

Common objections (handle each one):

1. "It's too expensive"
2. "We already have a solution for this"
3. "I need to think about it"
4. "I need to talk to my [boss/partner/team]"
5. "Can you send me more information?"
6. "We don't have the budget right now"
7. "I've never heard of your company"
8. "We tried something like this before and it didn't work"
9. "We're too busy to implement this right now"
10. "[Specific competitor] does this too, and they're cheaper"

For EACH objection, provide:

****What they're really saying:**** (the underlying concern)
****Response framework:**** (2-3 sentence response using the "Feel, Felt, Found" or "Acknowledge, Question, Reframe" method)
****Follow-up question:**** (to dig deeper and keep the conversation going)
****If they persist:**** (what to say if the first response doesn't resolve it)

Also include:

****3 Preemptive Strategies:****
 Ways to address these objections BEFORE they come up (in your pitch, on your website, in your proposals).

****The "No Budget" Recovery Plan:****
 5 creative alternatives when budget is genuinely the blocker (phased implementation, pilot programs, ROI guarantee, etc.)

Pro tip: "I need to think about it" is almost never about thinking — it's about an unspoken concern. Always respond with: "Of course. Just so I can be helpful — what specifically do you want to think through?" This surfaces the real objection.

60. Facebook/Instagram Ad Campaign

When to use: When creating paid social ad campaigns for Meta platforms.

Prompt:

Create a Facebook/Instagram ad campaign for [PRODUCT/SERVICE].

Product: [WHAT IT IS]
 Price: \$[AMOUNT]
 Target audience: [DEMOGRAPHICS, INTERESTS, BEHAVIORS]
 Monthly budget: \$[AMOUNT]
 Goal: [CONVERSIONS / LEADS / TRAFFIC / AWARENESS]
 Landing page: [URL]

Create:

****1. Campaign Structure****

- Campaign objective
- 3 ad sets targeting different audiences:
 - Ad Set 1: [COLD – interest-based targeting]
 - Ad Set 2: [WARM – lookalike audiences]
 - Ad Set 3: [HOT – retargeting]
- Budget allocation across ad sets

****2. Ad Creative (5 variations)****

For each ad:

- Ad format (single image, carousel, video)
- Primary text (first 125 characters are crucial – front-load the hook)
- Headline (under 40 characters)
- Description
- CTA button choice
- Image/video concept description
- Why this creative approach works for this audience

Creative types:

1. Problem-agitation ad
2. Social proof/testimonial ad
3. Before/after transformation ad
4. Listicle-style value ad ("3 reasons why...")
5. Storytelling ad (micro-narrative)

****3. Audience Targeting Details****

For each ad set: exact targeting parameters (interests, behaviors, demographics, custom audiences)

****4. Testing Plan****

- What to test first (creative vs. audience vs. copy)
- How much to spend in testing phase
- When to declare a winner
- How to scale winners

****5. Retargeting Strategy****

- Website visitor retargeting (days 1-3, 4-7, 8-14)
- Different message for each retargeting window
- Cart abandoner sequence (if applicable)

Pro tip: Creative fatigue is the #1 killer of Meta ad performance. Plan to refresh your top-performing ad every 2-3 weeks with a new variation — same message, different visual or angle.

61. Sales Proposal Template

When to use: When creating a professional proposal for a potential client or customer.

Prompt:

Write a sales proposal for [YOUR COMPANY] pitching [SERVICE/PRODUCT] to [PROSPECT COMPANY].

Context:

- What they need: [DESCRIBE THEIR PROBLEM/GOAL]
- What we're proposing: [OUR SOLUTION]
- Price: \$[AMOUNT]
- Timeline: [DURATION]
- Competition: [WHO ELSE THEY'RE CONSIDERING]

Write a complete proposal:

****1. Executive Summary (half page)****

Focus on THEIR goals, not our capabilities. "You told us you need X. Here's how we deliver it."

****2. Understanding of Your Needs****

Show we listened. Restate their problem in their words.
3-4 specific pain points we'll address.

****3. Proposed Solution****

- What we'll do (clear deliverables, not vague "strategy")
- How we'll do it (methodology/approach)
- What they can expect at each stage

****4. Timeline & Milestones****

| Phase | Duration | Deliverables | Client Involvement |
Include quick wins in the first 2 weeks.

****5. Investment****

- Pricing (presented as investment, with clear value context)
- What's included and what's not
- Payment terms
- Optional: tiered pricing (Good / Better / Best)

****6. Why Us****

- 3 reasons, supported by evidence (not "we're the best")
- Relevant case study or result (similar client, similar problem)

****7. Next Steps****

- Exactly what happens when they say yes
- Timeline to kick off
- Who their point of contact will be
- Simple acceptance mechanism

****8. Guarantee / Risk Reversal****

Something that reduces their risk: satisfaction guarantee, performance clause, pilot period.

Pro tip: Most proposals are about the seller. Winning proposals are about the buyer. Every section should answer "so what?" from the prospect's perspective.

62. Affiliate Marketing Program Setup

When to use: When creating an affiliate program to drive sales through partners.

Prompt:

Design an affiliate marketing program for [PRODUCT/SERVICE] at \$[PRICE POINT].

Current sales data:

- Monthly sales: [NUMBER]
- Average order value: \$[AMOUNT]
- Customer LTV: \$[AMOUNT]
- Current CAC (non-affiliate): \$[AMOUNT]

Build:

****1. Commission Structure****

- Commission rate (percentage or flat fee) with profitability math
- Cookie duration recommendation
- Payment terms and thresholds
- Tiered commissions for top performers

****2. Affiliate Recruitment****

- Ideal affiliate profile (who would promote this well?)
- 5 specific types of affiliates to target
- Outreach email template (for recruiting affiliates)
- Where to find potential affiliates

****3. Affiliate Resources Kit****

- Email swipe copy (3 promotional emails affiliates can send)
- Social media posts (5 ready-to-use posts)

- Banner ad copy and sizes
- Product description and talking points
- FAQ for affiliates to reference

****4. Program Rules****

- What affiliates can and can't do
- Brand guidelines
- Prohibited traffic sources
- How to handle refunds and chargebacks

****5. Technology & Tracking****

- Recommended affiliate platform
- Tracking and attribution setup
- Reporting dashboard needs
- Fraud prevention measures

****6. Growth Plan****

- Month 1-3: Launch and recruit first 20 affiliates
- Month 4-6: Optimize and scale top performers
- Month 7-12: Expand and automate

Pro tip: 80% of your affiliate revenue will come from 5-10 top affiliates. Identify them early, give them extra attention and custom commission rates, and treat them like partners, not vendors.

63. Newsletter Launch & Growth Plan

When to use: When starting or growing an email newsletter.

Prompt:

Create a launch and growth plan for an email newsletter about [TOPIC] targeting [AUDIENCE].

Newsletter concept:

- Name: [NAME OR "HELP ME NAME IT"]
- Frequency: [DAILY / WEEKLY / BIWEEKLY]
- Format: [CURATED LINKS / ORIGINAL ESSAYS / MIX]
- Monetization plan: [ADS / PAID TIER / LEAD GEN / BRAND BUILDING]
- Goal: [X] subscribers in [Y] months

****1. Newsletter Format Template****

Design the repeatable structure:

- Section 1: [NAME – what goes here]
- Section 2: [NAME – what goes here]
- Section 3: [NAME – what goes here]

Include: estimated read time, consistent elements readers expect

****2. Write Issue #1 in Full****

Complete first newsletter that I could send today.

****3. Subscriber Acquisition Plan****

10 tactics to grow from 0 to 1,000 subscribers:

For each: tactic description, expected conversion rate, effort level, timeline to results.

****4. Subscriber Acquisition Plan: 1,000 to 10,000****

5 tactics that work at scale (different from the first 1,000 tactics).

****5. Content Pipeline****

- How to source content/ideas consistently
- Batch production workflow (write 4 issues in 1 session)
- Content calendar for the first month (issue themes)

****6. Growth Metrics****

- Open rate benchmark for this niche
- Click rate benchmark

- Growth rate target (weekly)
- When to consider monetization

Pro tip: Consistency beats quality in the early days. Sending a “good enough” issue every week builds habit and trust faster than sending a “perfect” issue sporadically.

64. Upsell & Cross-Sell Email Sequence

When to use: When increasing revenue from existing customers through additional products or plan upgrades.

Prompt:

Write a 4-email upsell sequence for [CURRENT PRODUCT] customers to upgrade to [HIGHER TIER/ADD-ON].

Current product: \$[PRICE] – what it includes: [FEATURES]

Upsell product: \$[PRICE] – what's different/additional: [FEATURES]

Trigger: Send this when a customer [HAS BEEN ACTIVE FOR X DAYS / HITS A USAGE LIMIT / SHOWS SPECIFIC BEHAVIOR]

****Email 1: The Value Gap (Day 0)****

Show them what they're missing – not as a limitation, but as an opportunity.

- "You've done great with [what they've achieved]. Here's how to go further."
- Subject line + full copy + CTA

****Email 2: The Social Proof (Day 3)****

Customer story: someone who upgraded and got specific results.

- Subject line + full copy + CTA

****Email 3: The ROI Calculator (Day 7)****

Help them do the math: cost of upgrade vs. value they'd get.

- Subject line + full copy + CTA
- Include a simple "If you [use case], upgrading pays for itself in [timeframe]"

****Email 4: The Offer (Day 12)****

Limited-time incentive to upgrade (if applicable), or just a clear, confident ask.

- Subject line + full copy + CTA

For each email:

- Subject line (+ variant)
- Preview text
- Body copy (under 150 words)
- CTA button text

Also: In-app notification copy for the same upsell (3 variations, under 30 words each).

Pro tip: The best upsell trigger is usage, not time. When a customer hits 80% of their plan limit, that's the moment they feel the value of upgrading — not 30 days after signup.

65. Content Marketing Strategy

When to use: When building or overhauling your content marketing approach.

Prompt:

Build a content marketing strategy for [COMPANY] targeting [AUDIENCE] to achieve [GOAL – traffic, leads, authority, etc.].

Current state:

- Existing content: [DESCRIBE – blog, podcast, social, etc.]
- Monthly traffic: [APPROXIMATE]
- Content team: [SIZE – solo founder? Marketing team?]
- Budget for content: \$[AMOUNT]/month
- Biggest competitor's content: [WHAT THEY DO WELL]

Create:

****1. Content Pillars (3-5)****

For each pillar:

- Topic area
- Why this matters to our audience
- Why we're credible to talk about this
- Example titles (5 per pillar)

****2. Content Funnel****

| Stage | Content Type | Goal | Topics | CTA |

- Top of funnel: Awareness
- Middle of funnel: Consideration
- Bottom of funnel: Decision

****3. Monthly Content Mix****

- [X] blog posts (topics and formats)
- [X] social posts (platform and type)
- [X] emails (newsletter or nurture)
- [X] video/audio (if applicable)
- Realistic given our team size and budget

****4. Distribution Strategy****

For each piece of content, where and how we promote it:

- Owned channels
- Earned channels (where to pitch for guest posts, features)
- Paid amplification (when to boost, budget)

****5. Measurement Framework****

- Leading metrics: [what to track weekly]
- Lagging metrics: [what to track monthly]
- Content ROI: how to attribute revenue to content

****6. 90-Day Action Plan****

Month 1: [specific deliverables]

Month 2: [specific deliverables]

Month 3: [specific deliverables]

Pro tip: Create one pillar piece of content per month (2,000+ word guide) and use the repurposing system to generate 15-20 derivative pieces from it. That's your entire content machine.

66. Customer Onboarding Email Sequence (Service Business)

When to use: When onboarding a new client for a service-based business (consulting, agency, SaaS implementation).

Prompt:

Write a 5-email onboarding sequence for new clients of [SERVICE/AGENCY].

Service: [WHAT YOU DO FOR CLIENTS]

Typical engagement: [DURATION, PRICE, SCOPE]

Key onboarding actions the client needs to take: [LIST – e.g., fill out intake form, provide access, approve kickoff plan]

Biggest risk in first 30 days: [WHAT CAUSES PROJECTS TO GO SIDEWAYS]

****Email 1: Welcome & What to Expect (Day 0)****

- Warm welcome, confirm engagement details
- Clear timeline of what happens next
- One action item (the most important first step)

****Email 2: Getting Started Checklist (Day 1)****

- Everything they need to provide/do before we begin
- Make it specific and easy (links, templates, deadlines)
- Offer to help if they get stuck

****Email 3: Kickoff Confirmation (Day 3)****

- Confirm kickoff meeting/date
- Share the agenda
- Set expectations for the first deliverable

****Email 4: First Check-In (Day 7)****

- How things are going so far
- Address common early concerns proactively
- Reinforce what success looks like

****Email 5: Quick Win Delivery (Day 14)****

- Share the first result or insight
- Show progress and momentum
- Preview what's coming next

For each: Subject line, full copy, tone: professional but warm (not corporate).

Also include:

- Internal team checklist (what WE need to do before each email sends)
- Red flags: 3 warning signs the onboarding is going sideways and what to do

Pro tip: Deliver a “quick win” in the first 7-14 days — even a small one. Early wins build trust and buy you patience for the harder, longer-term work ahead.

67. Brand Messaging Framework

When to use: When creating or refining your brand’s core messaging for consistency across all channels.

Prompt:

Develop a brand messaging framework for [BRAND NAME].

About us:

- What we do: [DESCRIBE]
- Who we serve: [AUDIENCE]
- What makes us different: [DIFFERENTIATOR]
- Our values: [LIST]
- Our personality: [LIST ADJECTIVES]

Create:

****1. Elevator Pitch (3 versions)****

- 10-second version (one sentence)
- 30-second version (party conversation)
- 60-second version (investor meeting)

****2. Core Messages****

- Brand promise: [One sentence – what you guarantee]
- Tagline options: [5 options]
- Mission statement: [Clear, not corporate]
- Vision statement: [Aspirational but credible]

****3. Message Map****

Central message → 3 supporting messages → 3 proof points for each

****4. Audience-Specific Messaging****

For each audience (customers, investors, partners, recruits):

- What they care about most
- Key message adjusted for their perspective
- Tone adjustment

****5. Voice & Tone Guide****

- We sound like: [3 adjectives]
- We don't sound like: [3 adjectives]
- Example sentences: "We'd say [X], not [Y]"
- 5 do's and 5 don'ts for writing in our voice

****6. Boilerplate Copy****

- Company description (25 words)
- Company description (50 words)
- Company description (100 words)
- Founder bio (50 words)

Pro tip: Test your elevator pitch on someone outside your industry. If they can't explain what you do to a friend after hearing it once, it's not clear enough.

68. Abandoned Cart Recovery Sequence

When to use: When creating automated emails to recover abandoned shopping carts or incomplete signups.

Prompt:

Write a 3-email abandoned cart recovery sequence for [STORE/PRODUCT].

Product type: [WHAT THEY ALMOST BOUGHT]

Average cart value: \$[AMOUNT]

Main reasons people abandon: [PRICE, SHIPPING, COMPARISON SHOPPING, DISTRACTION, etc.]

Current recovery rate: [X]% (or "unknown")

****Email 1: Gentle Reminder (1 hour after abandonment)****

- Subject line (curious, not pushy)
- Keep it simple: "You left something behind"
- Show the product image and price
- One-click back-to-cart CTA
- NO discount yet
- Under 50 words of body copy

****Email 2: Value Reinforcement (24 hours)****

- Subject line (address a likely concern)
- Add social proof (reviews, ratings, testimonials)
- Answer the #1 objection for this product
- Consider: free shipping reminder, return policy, guarantee
- Still no discount (or very subtle)
- CTA back to cart

****Email 3: Urgency + Incentive (48-72 hours)****

- Subject line (create urgency)
- Limited-time offer if applicable (10% off, free shipping, bonus item)
- Scarcity element if genuine (low stock, ending soon)
- Clear "last chance" messaging
- CTA with the offer applied

For each email: Subject line (+ A/B variant), preview text, full HTML-ready copy.

Also include:

- SMS version of each email (for SMS-enabled stores)
- Exit intent popup copy (for the moment they're about to leave the page)
- Recommended: product page changes that reduce abandonment in the first place (3 ideas)

Pro tip: Email 1 (sent within 1 hour) is responsible for 50%+ of all cart recovery revenue. Don't delay it. And keep it dead simple — just show them what they left behind.

69. Local SEO Strategy

When to use: When optimizing for local search results (Google Maps, "near me" searches).

Prompt:

Build a local SEO strategy for [BUSINESS NAME], a [BUSINESS TYPE] in [CITY/AREA].

Business details:

- Physical locations: [NUMBER AND ADDRESSES]

- Service area: [GEOGRAPHIC COVERAGE]
- Top services/products: [LIST]
- Current Google Business Profile status: [CLAIMED? OPTIMIZED?]
- Current review count and rating: [X REVIEWS, X STARS]
- Main local competitors: [LIST 2-3]
- Website: [URL]

Create:

****1. Google Business Profile Optimization****

- Complete checklist of every field to fill out
- Category selection (primary + secondary)
- Description (750 characters, keyword-rich but natural)
- Photo strategy (types and quantity)
- Post strategy (frequency and content types)

****2. Review Generation System****

- How to ask for reviews (exact script/email)
- When to ask (the optimal moment)
- How to respond to positive reviews (template)
- How to respond to negative reviews (template that protects your brand)
- Goal: [X] new reviews per month

****3. Local Content Strategy****

- 10 "city + service" pages to create
- 5 locally-relevant blog post ideas
- Local link building: 10 specific opportunities

****4. Citation Building****

- Top 20 directories to list in (specific to this business type)
- NAP consistency checklist (Name, Address, Phone)

****5. Technical Local SEO****

- Schema markup to add (LocalBusiness)
- Location page structure
- Internal linking strategy

****6. Monthly Maintenance Checklist****

- What to do weekly (15 min)
- What to do monthly (1 hour)
- What to track and how

Pro tip: Reviews are the #1 local ranking factor. A business with 50 five-star reviews outranks a better-optimized business with 5 reviews almost every time. Make review generation a system, not an afterthought.

70. Influencer Outreach Campaign

When to use: When partnering with influencers or content creators for promotion.

Prompt:

Design an influencer marketing campaign for [PRODUCT/BRAND].

Product: [WHAT IT IS AND PRICE]

Target audience: [WHO]

Campaign goal: [AWARENESS / SALES / CONTENT CREATION]

Budget: \$[AMOUNT]

Timeline: [DURATION]

Create:

****1. Ideal Influencer Profile****

- Platform(s): [INSTAGRAM / YOUTUBE / TIKTOK / TWITTER]
- Follower range: [MICRO (1K-50K) / MID (50K-500K) / MACRO (500K+)]
- Content style that fits our brand
- Engagement rate minimum: [X]%
- Red flags to avoid

****2. Outreach Campaign****

- DM template (under 50 words – get to the point)
- Email template (for managers/agents)
- Follow-up template (3 days later)
- What to offer: [FREE PRODUCT / FLAT FEE / AFFILIATE / HYBRID]
- Negotiation guidelines: what's fair at each tier

****3. Campaign Brief for Influencers****

- Key messages to communicate (3 max)
- Required elements (hashtags, mentions, link, discount code)
- Content guidelines (do's and don'ts)
- Timeline and deadlines
- Rights and usage (can we repost their content?)

****4. Compensation Framework****

| Tier | Follower Range | Expected Deliverables | Suggested Payment | Expected Results |

****5. Measurement****

- How to track ROI per influencer
- Unique discount codes/links per creator
- What "success" looks like for this campaign
- When to re-engage top performers for ongoing partnerships

****6. Content Repurposing****

How to use influencer-created content in our own marketing (ads, website, email).

Pro tip: Micro-influencers (5K-50K followers) typically deliver 3-5x better ROI than macro-influencers because their audiences trust them more. Don't chase follower counts — chase engagement rates.

71. Sales Enablement Toolkit

When to use: When equipping your sales team (or yourself) with the materials needed to close deals.

Prompt:

Build a sales enablement toolkit for selling [PRODUCT/SERVICE] to [TARGET BUYER].

Product: [WHAT IT IS]

Price: [AMOUNT AND MODEL]

Sales cycle: [AVERAGE DAYS/WEEKS]

Decision-makers involved: [ROLES]

Top 3 competitors: [LIST]

Create:

****1. One-Pager / Leave-Behind****

- Front side: Problem, solution, 3 key benefits, pricing summary
- Back side: Case study, testimonials, contact info

Write the complete copy for both sides.

****2. Talk Track by Sales Stage****

| Stage | Prospect's Mindset | Key Messages | Materials to Share |

- Cold outreach
- Discovery call
- Demo
- Proposal
- Negotiation
- Close

****3. Email Templates****

- Meeting request email
- Post-demo follow-up
- "Going dark" re-engagement
- Proposal delivery email
- Close/ask-for-the-signature email

****4. ROI Calculator****

Help the prospect quantify the value:

"If you currently [pain point metric], and our solution [improvement], that's worth \$[amount] per [period]."

Build the formula and walk-through.

****5. Competitive Cheat Sheet****

For each competitor:

- When we win: [scenario]
- Talk track: [what to say]
- Landmine question: [question that highlights their weakness]

****6. Objection Response Card****

Top 10 objections with scripted responses (from prompt #59, customized for this product).

Pro tip: The ROI calculator is the most underrated sales tool. When the prospect can see their own numbers proving the value, they sell themselves.

72. Partnership Co-Marketing Campaign

When to use: When running a joint marketing campaign with a partner company.

Prompt:

Design a co-marketing campaign between [YOUR COMPANY] and [PARTNER COMPANY].

Our company: [WHAT WE DO, AUDIENCE SIZE]

Partner company: [WHAT THEY DO, AUDIENCE SIZE]

Shared audience: [WHO OVERLAPS]

Campaign goal: [LEADS / SIGNUPS / AWARENESS]

Combined budget: \$[AMOUNT]

Timeline: [DURATION]

Create:

****1. Campaign Concept****

- Theme/hook that's relevant to both audiences
- Content asset: [WEBINAR / EBOOK / TOOL / EVENT / CONTEST]
- Value proposition for the shared audience

****2. Content Plan****

- Joint content piece (outline + first draft)
- Supporting blog posts (one per company)
- Social media content (5 posts per company)
- Email to each company's list (full copy for both)

****3. Roles & Responsibilities****

Task	Owner (Us/Them)	Deadline	Status
------	-----------------	----------	--------

****4. Promotion Plan****

- What each company commits to promoting
- Cross-promotion mechanics
- Paid amplification strategy
- Landing page (one shared page or separate tracking?)

****5. Lead Sharing Agreement****

- How leads are captured
- How leads are split/shared
- Privacy compliance (GDPR, etc.)
- Follow-up ownership

****6. Success Metrics****

- KPIs for both companies
- How to measure and report
- Post-campaign review format

Pro tip: The best co-marketing campaigns create something neither company could create alone — a unique dataset, a tool that combines both products, or access to both audiences simultaneously.

73. Seasonal Marketing Campaign Planner

When to use: When planning marketing around holidays, seasons, or annual events.

Prompt:

Create a seasonal marketing campaign for [BUSINESS] around [SEASON/HOLIDAY/EVENT].

Business: [WHAT YOU SELL]

Event: [SPECIFIC OCCASION – e.g., Black Friday, Back to School, Q4 Planning Season]

Campaign window: [DATE RANGE]

Goal: [REVENUE TARGET OR OTHER KPI]

Budget: \$[AMOUNT]

Channels available: [EMAIL, SOCIAL, ADS, WEBSITE, etc.]

Build:

****1. Campaign Timeline****

- Pre-campaign (hype/tease phase): [DATES] – what to do
- Launch: [DATE] – what to do
- Mid-campaign: [DATES] – what to do
- Close/urgency: [DATES] – what to do
- Post-campaign: [DATES] – what to do

****2. Offer Strategy****

- What to offer (discount, bundle, exclusive, early access)
- Pricing details with margin analysis
- How to avoid devaluing the brand while driving sales

****3. Creative Assets Needed****

- Email designs: [HOW MANY, THEMES]
- Social graphics: [HOW MANY, FORMATS]
- Website banners/landing page changes
- Ad creative

****4. Email Campaign**** (5 emails, fully written)

- Tease, Launch, Reminder, Last Chance, Extended (if applicable)

****5. Social Media Posts**** (10 posts across the campaign)

Ready to publish, with posting dates.

****6. Paid Media Plan****

- Budget allocation by platform
- Audience targeting
- Ad creative descriptions
- Expected ROAS at different budget levels

Pro tip: Start teasing 7-10 days before launch — this is where email list and social following pays off. The brands that win seasonal campaigns are the ones that build anticipation, not the ones that launch loudest.

74. Customer Success Playbook

When to use: When building a systematic approach to ensuring customer success and reducing churn.

Prompt:

Build a customer success playbook for [PRODUCT/SERVICE] with [NUMBER] customers.

Product type: [B2B SAAS / MARKETPLACE / SERVICE / etc.]

Average contract value: \$[AMOUNT]

Current churn rate: [X]%

CS team size: [NUMBER – or "founder-led"]

Key activation milestone: [WHAT CUSTOMERS MUST DO TO GET VALUE]

Create:

****1. Customer Journey Map****

- | Stage | Timing | Customer Goal | Our Actions | Health Indicators |
|------------|----------------|---------------|-------------|-------------------|
| Onboarding | Day 0-14 | | | |
| Activation | Day 14-30 | | | |
| Adoption | Day 30-90 | | | |
| Expansion | Day 90+ | | | |
| Renewal | 30 days before | | | |

****2. Health Score Model****

Define a customer health score using:

- Product usage metrics (weight: 40%)
- Support interaction patterns (weight: 20%)
- Business outcomes achieved (weight: 25%)
- Relationship strength (weight: 15%)

For each component: what to measure, green/yellow/red thresholds.

****3. Intervention Playbooks****

- Red account rescue (step-by-step)
- Yellow account nudge (step-by-step)
- Green account expansion (step-by-step)

****4. QBR (Quarterly Business Review) Template****

- Agenda for a 30-minute QBR
- Prep checklist (what to research before the call)
- Slide deck outline
- How to turn a QBR into an upsell opportunity

****5. Automated Touchpoints****

- 10 triggered emails based on behavior/milestones
- For each: trigger condition, message, goal

Pro tip: The #1 predictor of churn is usage decline, not satisfaction surveys. Track weekly active usage and intervene the moment it drops — don't wait for the cancellation request.

75. Podcast Launch & Monetization Plan

When to use: When launching a podcast as a marketing or revenue channel.

Prompt:

Create a podcast launch and monetization plan for [PODCAST NAME/CONCEPT] in the [NICHE] space.

Concept: [WHAT THE PODCAST IS ABOUT]

Target listener: [WHO]

Format: [INTERVIEW / SOLO / CO-HOST / NARRATIVE]

Episode length: [MINUTES]

Release schedule: [WEEKLY / BIWEEKLY]

Build:

****1. Show Positioning****

- One-sentence show description
- What makes this different from the 50 other podcasts in this space
- 5 show name options (if needed)
- Elevator pitch for potential guests

****2. Launch Strategy****

- Pre-launch: How many episodes to bank before launching
- Launch week: How to spike in rankings (specific tactics)
- First 8 episode topics/guests (to build momentum)
- Trailer script

****3. Guest Acquisition****

- How to find ideal guests
- Outreach template (DM and email)
- Pre-interview process
- How to make guests promote the episode (without being pushy)

****4. Growth Tactics****

- 10 ways to grow listeners (ranked by effort vs. impact)
- Cross-promotion strategies
- Social media clips strategy
- Newsletter integration

****5. Monetization Timeline****

- Episodes 1-25: How to monetize early (if at all)
- Episodes 25-50: Mid-stage monetization options
- Episodes 50+: Scale monetization
- Revenue projections per monetization model (sponsorships, premium content, affiliate, leads)

****6. Production Workflow****

- Recording setup recommendations (budget and quality)
- Editing workflow (DIY vs. outsource, with costs)
- Show notes template
- Publishing checklist

Pro tip: Don't wait for perfect audio quality to launch. A \$50 USB microphone and a quiet room are enough. Content quality and consistency matter 10x more than production value in the first 50 episodes.

76. PPC Competitor Spy Analysis

When to use: When analyzing competitors' paid advertising strategies to inform your own campaigns.

Prompt:

Analyze the paid advertising strategy of [COMPETITOR] and identify opportunities for [YOUR COMPANY].

Competitor: [NAME AND URL]

Their product: [WHAT THEY SELL]

Our product: [WHAT WE SELL]

Our current ad channels: [WHERE WE ADVERTISE]

Our monthly ad budget: \$[AMOUNT]

Analyze (based on what you know about their industry and likely strategy):

****1. Search Ad Strategy****

- Keywords they likely bid on (20 high-value keywords)
- Ad copy patterns they probably use
- Landing page strategy
- Gaps: keywords they're probably NOT covering that we should

****2. Social Ad Strategy****

- Platforms they likely prioritize
- Ad format preferences (video, carousel, static)
- Messaging angles they use
- Audience targeting approach

****3. Opportunities for Us****

- 10 keywords/audiences they're underserving
- 5 messaging angles they're NOT using that we could own
- 3 channels they're likely ignoring
- Counter-positioning: how to appear alongside their ads with a better message

****4. Quick Wins****

- 5 campaigns we could launch this week to compete
- For each: channel, targeting, creative concept, expected CPA

****5. Budget Allocation Recommendation****

How to split our \$[BUDGET] to maximize competitive advantage:

Channel	% of Budget	Why
---------	-------------	-----

Pro tip: Don't try to outspend competitors — out-position them. If they're bidding on generic keywords, own the long-tail. If they're on Facebook, dominate LinkedIn. Find the gap, don't fight the crowd.

77. Customer Feedback Survey Designer

When to use: When creating surveys to gather actionable customer insights.

Prompt:

Design a customer feedback survey for [PRODUCT/SERVICE] to understand [WHAT YOU WANT TO LEARN].

Purpose: [NPS / SATISFACTION / FEATURE PRIORITIZATION / CHURN PREVENTION / PRODUCT-MARKET FIT]

Audience: [ALL CUSTOMERS / NEW CUSTOMERS / POWER USERS / CHURNED CUSTOMERS]

Target response rate: [X]%

Target completion time: Under [X] minutes

Create:

****1. Survey Questions (10–12 max)****

For each question:

- Question text (clear, unbiased)
- Question type (1–10 scale, multiple choice, open text, ranking)
- Why we're asking this (what decision it informs)
- How to analyze the responses

****2. Survey Structure****

- Opening: how to frame the survey (email invite copy)
- Question flow: logical grouping
- Branching logic (if Q3 = X, skip to Q7)
- Closing: thank you + what happens with their feedback

****3. Distribution Plan****

- Channel (email, in-app, post-support, etc.)
- Timing (when to send for highest response rate)
- Follow-up for non-responders
- Incentive strategy (if any)

****4. Analysis Framework****

- How to segment responses
- What to look for in open-text answers
- Statistical significance: minimum responses needed
- Action thresholds: "If [X]% say [Y], we do [Z]"

****5. Email Invitation****

Write the actual survey invitation email:

- Subject line
- Why their feedback matters (not "help us" – "shape the future of [X]")
- Time estimate
- CTA to take survey

Pro tip: Sean Ellis's product-market fit question — "How would you feel if you could no longer use [product]?" with options Very disappointed / Somewhat disappointed / Not disappointed — is the single most valuable survey question. If 40%+ say "very disappointed," you have PMF.

78. Viral Loop / Growth Hack Designer

When to use: When engineering word-of-mouth or viral mechanics into your product or marketing.

Prompt:

Design a viral loop or growth mechanism for [PRODUCT/SERVICE].

Current state:

- Product: [WHAT IT DOES]
- User count: [NUMBER]
- Current organic growth rate: [X]% per month
- Current referral rate: [X]% (or "unknown")
- K-factor: [IF KNOWN]
- Natural sharing moment: [WHEN DO USERS NATURALLY WANT TO SHARE?]

Design 3 viral loop concepts:

For each concept:

****1. The Mechanic****

- How it works step by step
- What triggers sharing
- What the receiver experiences
- What incentivizes the first action

****2. User Flow****

- Step 1: User does [X]
- Step 2: System prompts [Y]
- Step 3: Friend receives [Z]
- Step 4: Friend converts because [W]
- Step 5: Cycle repeats

****3. Expected Impact****

- Estimated viral coefficient (K-factor)
- Time for one cycle
- Projected growth if implemented

****4. Implementation****

- Technical requirements
- Copy for each touchpoint (share prompt, notification, landing page)
- A/B tests to run

****Rank all 3 concepts by:** Impact × Feasibility**

Also provide:

- 5 "growth hacks" specific to our product type (not generic "post on social media")
- 3 examples of similar products that grew virally and exactly what mechanism they used

Pro tip: The best viral loops are inherent to the product (Dropbox's shared folders, Calendly's scheduling link). Bolted-on referral programs work, but built-in sharing mechanics scale 10x better.

79. Trade Show / Conference Strategy

When to use: When preparing for a trade show, conference, or industry event.

Prompt:

Create a comprehensive strategy for [COMPANY] attending [EVENT NAME] on [DATES].

Event details:

- Event: [NAME AND LOCATION]
- Attendee profile: [WHO ATTENDS]
- Our goal: [LEADS / PARTNERSHIPS / BRAND AWARENESS / RECRUITING]
- Budget: \$[AMOUNT]
- Team attending: [NUMBER AND ROLES]
- Booth: [Y/N, SIZE] / Speaking slot: [Y/N]

Build:

****1. Pre-Event (4 weeks before)****

- Target attendee list building (how to identify who's attending)

- Pre-event outreach (email template to book meetings)
- Social media campaign (5 posts building anticipation)
- Materials to prepare (one-pagers, demos, swag)

****2. During Event****

- Booth strategy: what to display, demo flow, qualifying questions
- Meeting schedule optimization
- Social media live coverage plan
- Elevator pitch for casual encounters (30 seconds)
- Networking strategy: which sessions to attend, which parties/dinners

****3. Lead Capture****

- How to capture leads at the booth (don't just collect business cards)
- Qualification criteria (hot / warm / cold)
- Notes template (capture context while it's fresh)

****4. Post-Event (within 48 hours)****

- Follow-up email for hot leads (write it)
- Follow-up email for warm leads (write it)
- Follow-up email for casual connections (write it)
- Social media recap post
- Internal debrief template

****5. ROI Calculation****

How to measure if this event was worth the investment:

- | Metric | Target | Actual |
|------------------------------------|--------|--------|
| Meetings booked | | |
| Leads captured | | |
| Deals influenced | | |
| Cost per lead (vs. other channels) | | |

Pro tip: 80% of event ROI comes from the pre-work and follow-up, not what happens at the booth. Book 15-20 meetings before you arrive, and send follow-ups within 24 hours of meeting someone. After 48 hours, they've forgotten you.

80. Conversion Rate Optimization Audit

When to use: When your website or funnel isn't converting and you need to diagnose and fix it.

Prompt:

Conduct a CRO (Conversion Rate Optimization) audit for [WEBSITE URL].

Current metrics:

- Monthly traffic: [NUMBER]
- Conversion rate: [X]%
- Bounce rate: [X]%
- Top traffic sources: [LIST]
- Funnel steps: [DESCRIBE - e.g., homepage → pricing → signup → activation]
- Drop-off point: [WHERE PEOPLE LEAVE]
- Mobile vs. desktop split: [PERCENTAGE]

Audit each page/step:

****1. Homepage / Landing Page****

- Does the headline pass the 5-second test? (Is the value clear in 5 seconds?)
- Is the CTA above the fold and compelling?
- Is there social proof visible?
- What's creating friction or confusion?
- 3 specific changes to make, ranked by impact

****2. Pricing Page****

- Is the pricing clear and easy to compare?
- Is there a recommended plan?
- Are objections addressed?
- 3 specific changes to make

****3. Signup / Checkout Flow****

- How many steps/fields?
- What can be removed or simplified?
- Are there trust signals at the point of conversion?
- 3 specific changes to make

****4. Mobile Experience****

- Specific mobile usability issues
- Thumb-zone analysis for CTAs
- Load speed impact
- 3 mobile-specific changes

****5. Priority Roadmap****

| Change | Page | Expected Impact | Effort | Priority |
Top 10 changes ranked by impact/effort ratio.

****6. Quick Wins (implement today)****

5 changes that take less than 1 hour each and will noticeably improve conversion.

Pro tip: Before making any changes, set up proper tracking. You can't optimize what you can't measure. Google Analytics + a heatmap tool (Hotjar) + session recording gives you 90% of the insight you need.

81. YouTube Video SEO & Title Optimizer

When to use: When optimizing YouTube videos for discovery and click-through.

Prompt:

Optimize a YouTube video about [TOPIC] for maximum discoverability and engagement.

Video content: [BRIEF DESCRIPTION OF WHAT THE VIDEO COVERS]

Target viewer: [WHO]

Channel size: [SUBSCRIBER COUNT]

Niche: [CATEGORY]

Create:

****1. Title Options (10 variations)****

Organized by style:

- Curiosity gap titles (2)
- How-to titles (2)
- Listicle titles (2)
- Contrarian/surprising titles (2)
- Emotional titles (2)

Each under 60 characters. Include the target keyword naturally.

****2. Description****

- First 2 lines (visible before "Show More" – these are critical)
- Full description (200–300 words with natural keyword inclusion)
- Timestamps for key sections
- Links (to related content, products, social)
- 3–5 relevant hashtags

****3. Tags (20–30 tags)****

Mix of: exact match keyword, broad keyword, related topics, competitor video keywords, question-format tags.

****4. Thumbnail Concept****

- 3 thumbnail concepts described in detail
- Text overlay (3–4 words max)
- Color palette recommendation
- Emotion/expression to convey
- What makes someone click this over competitors

****5. Hook Script (First 30 Seconds)****

Write the opening that prevents people from clicking away.

Structure: Pattern interrupt → Promise → Proof → Preview.

****6. End Screen / CTA Strategy****

- What to say in the last 20 seconds
- Which video to link to (and why)
- Subscribe CTA that doesn't feel generic

Pro tip: Your thumbnail and title are responsible for 90% of a video's performance. Spend as much time on them as you do on the video itself. A/B test thumbnails after publishing — YouTube now lets you do this natively.

82. PR & Press Release Writer

When to use: When announcing news that warrants media coverage.

Prompt:

Write a press release and media pitch for [COMPANY] announcing [NEWS].

News: [WHAT'S HAPPENING – funding, launch, partnership, milestone, hire, etc.]

Company: [BRIEF DESCRIPTION]

Key people: [NAMES AND TITLES]

Relevance: [WHY THIS MATTERS TO THE INDUSTRY/PUBLIC]

Target publications: [WHERE WE WANT COVERAGE]

Create:

****1. Press Release (standard format)****

- Headline (under 80 characters, newsworthy, not promotional)
- Subheadline
- Dateline and opening paragraph (who, what, when, where, why)
- Body (3–4 paragraphs with context, quotes, and data)
- Quote from CEO/founder (sounds human, not corporate)
- Quote from customer or partner (adds credibility)
- Boilerplate (about the company, 50 words)
- Contact information

****2. Media Pitch Email****

- Subject line (compelling, journalist-friendly)
- Body (under 100 words – respect their time)
- Why this story matters to THEIR readers (not why it matters to us)
- Exclusive offer (if applicable)

****3. Journalist Target List Criteria****

- Types of journalists/publications to target
- How to find the right reporter (beat matching)
- 5 specific angles for different types of publications

****4. Supporting Materials****

- Fact sheet (key data points in scannable format)
- FAQ for journalists (5 questions they'll ask)
- Executive quote sheet (3 quotable statements)
- Assets to provide (logos, headshots, screenshots)

****5. Social Media Announcement****

- Twitter/X thread (5 tweets)
- LinkedIn post
- Company blog post outline

Pro tip: Journalists don't care about your product — they care about a story their readers will find interesting. Frame everything around the trend, the impact, or the human story, not the feature list.

83. Email Subject Line Swipe File

When to use: When you need high-performing email subject lines for any campaign type.

Prompt:

Generate 50 email subject lines for [COMPANY/PRODUCT] across these campaign types:

Product: [WHAT YOU SELL]

Audience: [WHO RECEIVES THESE EMAILS]

Brand voice: [FORMAL / CASUAL / WITTY / AUTHORITATIVE]

10 subject lines per category:

****1. Product Launch / Announcement****

(Create excitement about something new)

****2. Educational / Value****

(Get opens for content-driven emails)

****3. Sales / Promotional****

(Drive opens when there's an offer)

****4. Re-engagement / Win-Back****

(Get cold subscribers to open again)

****5. Urgency / Scarcity****

(Create time pressure without being spammy)

For each subject line:

- The subject line (under 50 characters)
- Preview text that complements it (under 80 characters)
- What psychological trigger it uses (curiosity, FOMO, self-interest, social proof, urgency, exclusivity)

Also provide:

- 5 "power words" that boost open rates in our industry
- 5 words/phrases to AVOID (spam triggers, overused, credibility-killers)
- A/B testing strategy: how to test subject lines with a small segment before sending to full list

Pro tip: The most reliable subject line formula: [Number] + [Adjective] + [Noun] + [Promise]. Example: "7 Quick Fixes That Doubled Our Revenue." Curiosity + specificity = opens.

84. Marketing Attribution Model

When to use: When trying to understand which marketing channels are actually driving results.

Prompt:

Design a marketing attribution model for [BUSINESS].

Current channels:

- Organic search: [X]% of traffic
- Paid search: [X]% of traffic, \$[X]/month spend
- Social media (organic): [X]% of traffic
- Social media (paid): [X]% of traffic, \$[X]/month spend
- Email: [X]% of traffic
- Referral/word of mouth: [X]% of traffic
- Direct: [X]% of traffic

Conversion funnel: [DESCRIBE – visit → signup → trial → paid, etc.]

Average deal cycle: [X] days

Monthly marketing budget: \$[AMOUNT]

Create:

****1. Attribution Model Selection****

Compare these models for our business:

- Last-touch attribution
- First-touch attribution

- Linear attribution
- Time-decay attribution
- Position-based (U-shaped) attribution

Recommend the best model for our stage and explain why.

****2. Implementation Plan****

- UTM parameter strategy (naming conventions)
- Tracking setup checklist
- Tools needed (free and paid options)
- How to handle multi-device/cross-session tracking

****3. Channel ROI Analysis****

| Channel | Spend | Attributed Revenue | ROAS | CAC | Trend |
Based on estimated performance with our data.

****4. Budget Reallocation Recommendation****

- Which channels to invest more in (and how much)
- Which channels to reduce (and by how much)
- One new channel to test and budget to allocate
- Expected impact of reallocation

****5. Reporting Dashboard****

- What metrics to review weekly
- Monthly deep-dive analysis template
- How to present marketing ROI to leadership

Pro tip: Perfect attribution is impossible — and chasing it is a waste of time. Pick a model that’s “good enough” for your stage, apply it consistently, and make decisions based on directional trends, not precise numbers.

85. Sales Follow-Up Sequence

When to use: When creating a systematic follow-up process after initial sales contact.

Prompt:

Write a multi-touch sales follow-up sequence for [PRODUCT/SERVICE] after [TRIGGER – demo, meeting, proposal, etc.].

Context:

- What happened: [THE INITIAL INTERACTION]
- Decision timeline: [WHEN THEY SAID THEY'D DECIDE]
- Stakeholders involved: [WHO ELSE NEEDS TO AGREE]
- Main concerns raised: [WHAT CAME UP]
- Agreed next step: [WHAT WAS SUPPOSED TO HAPPEN]

Create an 8-touch follow-up sequence over 28 days:

****Touch 1: Same Day****

- Channel: Email
- Purpose: Recap and confirm next steps
- Full email copy

****Touch 2: Day 2****

- Channel: Email
- Purpose: Add value (relevant resource, case study, or insight)
- Full email copy

****Touch 3: Day 5****

- Channel: LinkedIn
- Purpose: Social touch (engage with their content or share something relevant)
- Action to take

****Touch 4: Day 7****

- Channel: Email
- Purpose: Address likely concern proactively
- Full email copy

****Touch 5: Day 10****

- Channel: Phone/voicemail
- Purpose: Human connection, check-in
- Voicemail script (under 30 seconds)

****Touch 6: Day 14****

- Channel: Email
- Purpose: New angle or social proof
- Full email copy

****Touch 7: Day 21****

- Channel: Email
- Purpose: Create urgency (genuine reason to act)
- Full email copy

****Touch 8: Day 28****

- Channel: Email
- Purpose: Breakup email – respectful close of the loop
- Full email copy

For each touch: Keep emails under 100 words. Every email must provide value OR advance the conversation.

Pro tip: The average B2B deal requires 8-12 touches before closing. Most salespeople give up after 2-3. This sequence alone puts you ahead of 80% of your competitors.

3. Coding & Development

86. The Code Review Checklist

When to use: Before merging any PR or reviewing a teammate's code. **Prompt:**

Review this code with a senior engineer's eye. Check for:

1. ****Correctness**** – Does it do what it claims? Edge cases handled?
2. ****Security**** – SQL injection, XSS, auth bypasses, exposed secrets?
3. ****Performance**** – N+1 queries, unnecessary loops, missing indexes?
4. ****Readability**** – Clear naming, reasonable function length, comments where needed?
5. ****Error handling**** – What happens when things fail? Are errors swallowed?
6. ****Testing**** – Is this testable? Are critical paths covered?
7. ****Architecture**** – Does this belong here? Does it follow existing patterns?

For each issue found, rate severity (critical/warning/nit) and suggest a fix.

Code to review:
[paste code]

Pro tip: Always specify the language and framework — context changes what counts as a “best practice.”

87. The Bug Detective

When to use: When you're staring at a bug you can't figure out. **Prompt:**

I'm debugging an issue in [language/framework]. Here's what's happening:

****Expected behavior:**** [what should happen]
****Actual behavior:**** [what's actually happening]
****Steps to reproduce:**** [how to trigger it]
****What I've already tried:**** [list your attempts]
****Error messages/logs:**** [paste relevant output]

****Relevant code:**** [paste the suspicious code]

Walk me through a systematic debugging approach:

1. What are the most likely root causes, ranked by probability?
2. What diagnostic steps would confirm or rule out each cause?
3. What's the fix for the most likely cause?
4. How do I prevent this class of bug in the future?

Pro tip: The more context you provide about what you've already tried, the faster you skip past obvious suggestions.

88. The Architecture Decision Record

When to use: When making a significant technical decision that future-you needs to understand. **Prompt:**

Help me write an Architecture Decision Record (ADR) for the following decision:

****Context:**** [what's the situation and constraints]

****Decision needed:**** [what we're deciding]

****Options considered:**** [list the alternatives]

Structure the ADR as:

- ****Title:**** Short descriptive name
- ****Status:**** Proposed
- ****Context:**** Why this decision is needed now
- ****Options:**** Each option with pros, cons, and rough effort estimate
- ****Decision:**** Recommended option with justification
- ****Consequences:**** What changes, what we gain, what we give up
- ****Review date:**** When to revisit this decision

Be opinionated. Don't just list options – recommend one and defend it.

Pro tip: ADRs are worth gold in 6 months when someone asks “why did we build it this way?”

89. The API Documentation Generator

When to use: When you need clear, developer-friendly API docs fast. **Prompt:**

Generate comprehensive API documentation for the following endpoint(s):

[paste your route handler / controller code]

For each endpoint, document:

- ****Method & Path**** (e.g., POST /api/v1/users)
- ****Description**** – What it does in one sentence
- ****Authentication**** – Required? What type?
- ****Request headers**** – Content-Type, Authorization, etc.
- ****Path parameters**** – Name, type, description
- ****Query parameters**** – Name, type, required/optional, default, description
- ****Request body**** – JSON schema with example
- ****Response**** – Status codes, response body schema with example for each
- ****Error responses**** – Common error codes with example bodies
- ****Rate limits**** – If applicable
- ****Example cURL request****

Format as clean markdown suitable for a docs site.

Pro tip: Include at least one complete request/response example — developers read examples before they read specs.

90. The Test Suite Architect

When to use: When you need to build a comprehensive test strategy for a feature. **Prompt:**

Design a complete test suite for this feature/module:

[describe the feature or paste the code]

Create tests organized by type:

1. ****Unit tests**** – Test individual functions in isolation. Mock external dependencies.
2. ****Integration tests**** – Test how components work together. Use real (or test) databases.
3. ****Edge case tests**** – Boundary values, empty inputs, max limits, unicode, concurrent access.
4. ****Error path tests**** – Network failures, invalid input, permission denied, timeout scenarios.
5. ****Regression tests**** – Specific scenarios that would catch common bugs in this type of code.

For each test:

- Test name (descriptive, reads like a sentence)
- Setup/arrange
- Action
- Expected result

Use [testing framework, e.g., Jest/pytest/Go testing]. Write actual runnable test code.

Pro tip: Start with the error paths — that's where most production bugs hide.

91. The Legacy Code Refactoring Plan

When to use: When facing a gnarly legacy codebase that needs modernization. **Prompt:**

I need to refactor this legacy code. Here's what I'm working with:

[paste the code]

****Current problems:**** [what's wrong – performance, readability, bugs, etc.]
****Constraints:**** [what can't change – APIs, database schema, deployment, etc.]
****Target state:**** [what "good" looks like]

Create a step-by-step refactoring plan:

1. Identify the "seams" – safe places to make changes without breaking things
2. Write characterization tests that lock in current behavior BEFORE changing anything
3. List each refactoring step in order, with:
 - What changes
 - Why it's safe (what tests protect it)
 - Risk level (low/medium/high)
4. Show the refactored code for the highest-impact change
5. Suggest what to tackle next vs. what to leave alone (not everything needs fixing)

Prioritize safety over elegance. Working ugly code > broken pretty code.

Pro tip: Never refactor without tests. If there are no tests, writing them IS the first refactoring step.

92. The Database Schema Designer

When to use: When designing a new database schema or restructuring an existing one. **Prompt:**

Design a database schema for the following system:

****Domain:**** [describe what the system does]
****Key entities:**** [list the main things you need to store]
****Key relationships:**** [how entities relate to each other]
****Scale expectations:**** [rough numbers – users, records, queries/sec]
****Database type:**** [PostgreSQL / MySQL / MongoDB / etc.]

Provide:

1. ****Entity-relationship overview**** – ASCII diagram showing tables and relationships
2. ****Table definitions**** – Complete CREATE TABLE statements with:

- Appropriate data types (don't just use VARCHAR(255) for everything)
 - Primary keys, foreign keys, unique constraints
 - Indexes for expected query patterns
 - Created/updated timestamps
3. ****Indexing strategy**** – Which indexes and why
 4. ****Common queries**** – SQL for the 5 most frequent operations
 5. ****Migration plan**** – If restructuring, safe steps to migrate data
 6. ****Gotchas**** – Potential issues at scale and how to address them

Pro tip: Design your indexes based on your actual query patterns, not your entity relationships.

93. The CI/CD Pipeline Builder

When to use: When setting up or improving a deployment pipeline. **Prompt:**

Design a CI/CD pipeline for my project:

****Stack:**** [languages, frameworks, infrastructure]
****Hosting:**** [AWS/GCP/Vercel/Railway/etc.]
****Current process:**** [how deploys happen now, even if manual]
****Team size:**** [number of developers]
****Branching strategy:**** [main/develop, trunk-based, etc.]

Create a complete pipeline configuration that includes:

1. ****Trigger rules**** – When does the pipeline run?
2. ****Build stage**** – Install deps, compile, build artifacts
3. ****Test stage**** – Unit tests, integration tests, linting
4. ****Security stage**** – Dependency audit, secret scanning, SAST
5. ****Deploy to staging**** – Automatic on merge to main
6. ****Deploy to production**** – Manual approval gate or auto with canary
7. ****Post-deploy**** – Smoke tests, monitoring checks, rollback trigger
8. ****Notifications**** – Slack/Discord alerts on failure

Write the actual config file (GitHub Actions / GitLab CI / etc.) with comments explaining each step.

Pro tip: Start with the simplest pipeline that catches real bugs, then add complexity. A 45-minute pipeline nobody waits for is worse than a 5-minute one that catches 80% of issues.

94. The Security Audit Prompt

When to use: Before launching or after inheriting a codebase. **Prompt:**

Perform a security audit on this code/application:

[paste code or describe the architecture]

Check for these vulnerability categories:

1. ****Authentication**** – Weak passwords, missing MFA, session management flaws
2. ****Authorization**** – Privilege escalation, IDOR, missing access checks
3. ****Injection**** – SQL, NoSQL, command injection, XSS, SSRF
4. ****Data exposure**** – Sensitive data in logs, responses, or error messages
5. ****Configuration**** – Debug mode in prod, default credentials, CORS misconfiguration
6. ****Dependencies**** – Known CVEs in packages
7. ****Cryptography**** – Weak algorithms, hardcoded keys, improper random generation
8. ****API security**** – Rate limiting, input validation, mass assignment

For each finding:

- ****Severity:**** Critical / High / Medium / Low
- ****Location:**** Where in the code
- ****Attack scenario:**** How it could be exploited
- ****Fix:**** Specific code change to remediate
- ****Prevention:**** How to prevent this class of vulnerability going forward

Prioritize by real-world exploitability, not theoretical risk.

Pro tip: Run this on your authentication and payment flows first — that’s where the highest-impact vulnerabilities live.

95. The Error Handling Strategy

When to use: When building robust error handling across an application. **Prompt:**

Design an error handling strategy for my [type of application – API/web app/CLI/etc.] built with [stack].

Current state: [describe current error handling, even if it's "basically none"]

Design a comprehensive approach covering:

1. **Error taxonomy** – Categorize errors (validation, auth, not found, conflict, internal, external service)
2. **Error response format** – Consistent structure for all error responses with example
3. **Error codes** – Application-specific error codes beyond HTTP status codes
4. **Logging strategy** – What to log at each level (error vs warn vs info), what context to include
5. **User-facing messages** – Friendly messages that help without exposing internals
6. **Retry logic** – Which errors are retryable, backoff strategy
7. **Circuit breakers** – For external service calls
8. **Global error handler** – Catch-all that prevents crashes and logs everything
9. **Monitoring/alerting** – What to alert on, what to dashboard

Provide actual code for the error handling middleware/utility and 3 examples of it in use.

Pro tip: Good error handling is invisible to users and invaluable to developers. Log the stack trace and context; show the user a helpful message and an error code they can reference.

96. The Performance Profiler

When to use: When your app is slow and you need to find out why. **Prompt:**

My [application type] is experiencing performance issues:

Symptom: [what's slow – page load, API response, query, etc.]
Current performance: [how slow – 5s page load, 2s API response, etc.]
Target performance: [what "fast enough" means]
Stack: [languages, frameworks, database, hosting]
Scale: [traffic volume, data size]

Help me systematically diagnose and fix this:

1. **Measurement first** – What specific metrics should I capture and how?
2. **Common culprits** – For this stack, what are the most likely bottlenecks?
3. **Database** – Query analysis, missing indexes, N+1 problems, connection pooling
4. **Application** – Memory leaks, blocking operations, unnecessary computation
5. **Network** – Payload size, number of requests, caching headers
6. **Infrastructure** – Resource limits, scaling configuration
7. **Quick wins** – Changes that typically yield the biggest improvement with least effort
8. **Monitoring** – What to track ongoing to prevent regression

For each suggestion, estimate the expected improvement and implementation effort.

Pro tip: Always measure before optimizing. “I think it’s the database” is how you waste a week optimizing the wrong thing.

97. The Docker Containerization Guide

When to use: When containerizing an application or optimizing an existing Dockerfile. **Prompt:**

Help me containerize this application (or optimize my existing Dockerfile):

****Application:**** [describe what it does]
****Stack:**** [language, framework, runtime]
****Dependencies:**** [system packages, external services needed]
****Current Dockerfile:**** [paste if exists, or "starting from scratch"]
****Requirements:****
– Production-ready (not just "it works")
– Minimal image size
– Fast build times (layer caching matters)
– Security hardened

Provide:

1. ****Dockerfile**** – Multi-stage build, non-root user, proper layer ordering
2. ****dockerignore**** – What to exclude
3. ****docker-compose.yml**** – Full local development setup with all services
4. ****Health check**** – Proper HEALTHCHECK instruction
5. ****Environment variables**** – How to handle config and secrets
6. ****Build optimization**** – Layer caching strategy, build args
7. ****Security**** – Image scanning, minimal base image, no secrets in layers
8. ****Production notes**** – Resource limits, logging, graceful shutdown

Pro tip: Order your Dockerfile layers from least-changed to most-changed. Dependencies before source code. Always.

98. The Git Workflow Fixer

When to use: When your git history is a mess or you need to set up a team workflow. **Prompt:**

I need help with my Git workflow. Current situation:

****Problem:**** [describe the mess – merge conflicts, messy history, unclear branching, etc.]
****Team size:**** [solo / small team / large team]
****Current branching model:**** [describe or "chaos"]
****Deploy frequency:**** [daily / weekly / on-demand]

Help me with:

1. ****Branching strategy**** – Recommend and explain a model that fits my team
2. ****Commit conventions**** – Message format, what constitutes a good commit
3. ****PR process**** – Template, review requirements, merge strategy (squash/rebase/merge)
4. ****Branch protection**** – What rules to enforce
5. ****Common rescue operations**** – The 5 git commands I'll actually need when things go wrong:
 - Undo last commit
 - Fix a merge conflict
 - Cherry-pick a hotfix
 - Clean up commit history
 - Recover a deleted branch
6. ****Aliases**** – Useful git aliases to save time

For the immediate problem: give me the exact git commands to fix it, with explanations.

Pro tip: git reflog is your panic button. Almost nothing in Git is truly lost — reflog keeps 90 days of history.

99. The Code Migration Planner

When to use: When migrating between frameworks, languages, or major versions. **Prompt:**

Plan a migration for my project:

****From:**** [current stack/version]
****To:**** [target stack/version]
****Codebase size:**** [rough LOC or number of files]
****Timeline pressure:**** [deadline or "whenever it's ready"]

****Risk tolerance:**** [can't afford downtime / some downtime OK / greenfield rebuild OK]

Create a migration plan:

1. ****Assessment**** – What breaks? Incompatible APIs, deprecated features, changed behavior
2. ****Strategy**** – Big bang vs. strangler fig vs. parallel run. Recommend one and justify.
3. ****Dependency audit**** – Which libraries need updates/replacements
4. ****Migration order**** – What to migrate first, what to migrate last, and why
5. ****Coexistence**** – How old and new code live together during migration
6. ****Testing strategy**** – How to verify the migration doesn't break things
7. ****Rollback plan**** – How to undo if something goes catastrophically wrong
8. ****Checklist**** – Step-by-step tasks I can put in a project tracker

Include time estimates for each phase.

Pro tip: The strangler fig pattern (gradually replacing pieces while keeping the old system running) is almost always safer than a big-bang rewrite.

100. The TypeScript Type Wizard

When to use: When you need complex TypeScript types or want to improve type safety. **Prompt:**

Help me with TypeScript types for this scenario:

****What I'm building:**** [describe the feature/module]
****Current code:**** [paste code with `any` types or type errors]
****What I want:**** [describe the type behavior – "it should autocomplete", "it should error if X", etc.]

Provide:

1. ****Type definitions**** – Clean, well-named types that capture the domain
2. ****Generics**** – Where generics add value (not just for show)
3. ****Type guards**** – Runtime checks that narrow types safely
4. ****Utility types**** – Pick, Omit, Partial, Record – used appropriately
5. ****Explanation**** – For each complex type, a plain-English explanation of what it does

Rules:

- No `any` unless truly unavoidable (and explain why)
- Prefer interfaces for objects, types for unions/intersections
- Make impossible states unrepresentable
- Types should help autocomplete, not just satisfy the compiler

Pro tip: The best TypeScript types make wrong code fail to compile. Design your types to make invalid states impossible, not just to satisfy the type checker.

101. The Regex Builder

When to use: When you need a regex and don't want to spend 45 minutes on regex101. **Prompt:**

Build a regex for the following requirement:

****What I'm matching:**** [describe in plain English]
****Examples that SHOULD match:**** [list 3–5 examples]
****Examples that should NOT match:**** [list 3–5 examples]
****Language/engine:**** [JavaScript, Python, Go, PCRE, etc.]
****Flags needed:**** [case-insensitive, multiline, etc.]

Provide:

1. ****The regex**** with each part annotated
2. ****Plain English breakdown**** – What each group/quantifier/assertion does
3. ****Test results**** against all my examples
4. ****Edge cases**** I probably haven't thought of
5. ****Performance note**** – Any catastrophic backtracking risks
6. ****Code snippet**** – How to use it in my language with capture groups extracted

Pro tip: If your regex is longer than one line, you probably need a parser instead. Regex is for patterns, not grammars.

102. The API Rate Limiter Design

When to use: When implementing rate limiting for your API. **Prompt:**

Design a rate limiting system for my API:

```
**API type:** [REST / GraphQL / WebSocket]
**Expected traffic:** [requests per second/minute]
**User types:** [free/paid tiers, API keys, anonymous]
**Infrastructure:** [single server / load balanced / serverless]
**Current stack:** [language, framework, cache layer]
```

Design:

1. **Algorithm choice** – Token bucket / sliding window / fixed window – which and why
2. **Rate limit tiers** – Limits per user type with justification
3. **Implementation** – Actual code for the middleware/interceptor
4. **Storage** – Redis schema or in-memory approach
5. **Headers** – X-RateLimit-Limit, Remaining, Reset – proper implementation
6. **Response** – 429 response format with retry-after
7. **Distributed concerns** – How this works across multiple servers
8. **Bypass rules** – Health checks, internal services, webhooks
9. **Monitoring** – What to track, when to alert

Pro tip: Always return rate limit headers on EVERY response, not just 429s. Your API consumers will thank you.

103. The Microservices Decomposition

When to use: When breaking a monolith into services or designing a new distributed system. **Prompt:**

Help me design a microservices architecture:

```
**Current system:** [monolith description or new system requirements]
**Domain:** [what the business does]
**Team structure:** [how many teams, how they're organized]
**Scale requirements:** [what parts need independent scaling]
```

Provide:

1. **Service boundaries** – What services to create and why (bounded contexts)
2. **Communication patterns** – Sync (HTTP/gRPC) vs async (events/queues) for each interaction
3. **Data ownership** – Which service owns which data, no shared databases
4. **API contracts** – Interface definitions between services
5. **Event schema** – For async communication, what events each service publishes/consumes
6. **Failure modes** – What happens when each service goes down
7. **Deployment strategy** – Independent deploy pipeline per service
8. **What to NOT split** – Things that should stay together (don't over-decompose)

Be conservative. Fewer, well-defined services > many tiny services that create distributed monolith hell.

Pro tip: If two services need to be deployed together to work, they're not separate services — they're a distributed monolith. Merge them.

104. The WebSocket Architecture

When to use: When building real-time features (chat, live updates, collaborative editing). **Prompt:**

Design a WebSocket implementation for:

****Feature:**** [what needs real-time updates]
****Scale:**** [concurrent connections expected]
****Stack:**** [backend language/framework, frontend framework]
****Infrastructure:**** [single server / load balanced / serverless]

Provide:

1. ****Connection lifecycle**** – Connect, authenticate, heartbeat, reconnect, disconnect
2. ****Message protocol**** – JSON schema for all message types (client→server and server→client)
3. ****Room/channel design**** – How to group connections (if applicable)
4. ****Authentication**** – How to auth WebSocket connections securely
5. ****Scaling strategy**** – How to handle multiple server instances (Redis pub/sub, etc.)
6. ****Error handling**** – Connection drops, invalid messages, server errors
7. ****Client code**** – Reconnection logic with exponential backoff
8. ****Server code**** – Connection manager, message routing, cleanup
9. ****Fallback**** – SSE or long-polling for environments that block WebSockets

Pro tip: Always implement heartbeat/ping-pong. Without it, you'll have ghost connections eating resources for hours.

105. The Database Query Optimizer

When to use: When a query is slow and you need it fast. **Prompt:**

Optimize this database query:

****Database:**** [PostgreSQL / MySQL / MongoDB / etc.]
****Query:**** [paste the slow query]
****Table structure:**** [paste CREATE TABLE or describe schema]
****Current indexes:**** [list existing indexes]
****Data volume:**** [approximate row counts for involved tables]
****Current execution time:**** [how slow it is]
****EXPLAIN output:**** [paste if available]

Provide:

1. ****Analysis**** – Why it's slow (full table scan, bad join order, missing index, etc.)
2. ****Optimized query**** – Rewritten query with explanation of changes
3. ****Index recommendations**** – Exactly which indexes to add, with CREATE INDEX statements
4. ****EXPLAIN comparison**** – What the execution plan should look like after optimization
5. ****Trade-offs**** – Write performance impact of new indexes, storage cost
6. ****Application-level fixes**** – Caching, pagination, denormalization if appropriate

Pro tip: Always check the EXPLAIN plan. “I think it needs an index” without looking at the execution plan is like prescribing medicine without a diagnosis.

106. The Environment Configuration Manager

When to use: When setting up proper environment variable management. **Prompt:**

Design an environment configuration system for my project:

****Stack:**** [language/framework]
****Environments:**** [local, staging, production, CI]
****Current approach:**** [.env files / hardcoded / chaos]
****Secrets involved:**** [API keys, database URLs, tokens, etc.]

Provide:

1. ****Config structure**** – How to organize environment variables by category
2. ****env.example**** – Template file with all variables, descriptions, and example values (no real secrets)
3. ****Validation**** – Code that validates all required env vars exist at startup (fail fast, don't discover missing vars at runtime)
4. ****Type-safe access**** – Typed config object, not raw process.env scattered everywhere
5. ****Secret management**** – How to handle secrets in each environment (local vs CI vs production)

6. ****Documentation**** – Self-documenting config with descriptions
7. ****gitignore rules**** – What to commit, what to never commit

Pro tip: Your app should crash loudly on startup if a required env var is missing. Discovering a missing config in production at 2 AM is not fun.

107. The Logging and Observability Setup

When to use: When setting up structured logging and monitoring. **Prompt:**

Design a logging and observability strategy for my application:

```
**Stack:** [language/framework]
**Deployment:** [where it runs]
**Current logging:** [console.log everywhere / some structured / none]
**Budget:** [free tier only / can pay for tools]
```

Provide:

1. ****Log levels**** – When to use each (error, warn, info, debug) with examples
2. ****Structured logging**** – JSON format with standard fields (timestamp, level, service, requestId, userId)
3. ****Request tracing**** – Correlation IDs that flow through the entire request lifecycle
4. ****What to log**** – Request/response, errors, business events, performance metrics
5. ****What NOT to log**** – PII, passwords, tokens, credit cards (with code to redact)
6. ****Log aggregation**** – Tool recommendation and setup (based on budget)
7. ****Alerting rules**** – What to alert on, thresholds, who gets paged
8. ****Dashboard**** – Key metrics to visualize
9. ****Implementation**** – Actual logging utility code for my stack

Pro tip: A single request ID that flows from frontend through every backend service will save you more debugging time than any other observability investment.

108. The Webhook System Designer

When to use: When building webhook sending or receiving infrastructure. **Prompt:**

Design a webhook system for my application:

```
**Direction:** [sending webhooks to users / receiving webhooks from services / both]
**Events:** [list the events that trigger webhooks]
**Expected volume:** [webhooks per hour/day]
**Reliability requirement:** [best effort / at-least-once / exactly-once]
**Stack:** [language/framework/queue system]
```

Provide:

1. ****Event catalog**** – Each event with payload schema and example
2. ****Delivery system**** – Queue-based async delivery with retry logic
3. ****Retry strategy**** – Exponential backoff, max attempts, dead letter queue
4. ****Security**** – HMAC signature verification, timestamp validation
5. ****Idempotency**** – How to handle duplicate deliveries
6. ****Registration API**** – Endpoints for managing webhook subscriptions
7. ****Monitoring**** – Delivery success rates, latency, failure tracking
8. ****Testing**** – How subscribers can test their integration
9. ****Documentation**** – Developer-facing docs with examples in curl and common languages

Pro tip: Always include a webhook signature so consumers can verify the payload came from you. HMAC-SHA256 with a shared secret is the standard approach.

109. The Caching Strategy Architect

When to use: When designing a caching layer for your application. **Prompt:**

Design a caching strategy for my application:

****What's slow:**** [which operations need caching]
****Data characteristics:**** [how often data changes, consistency requirements]
****Stack:**** [language/framework/current infrastructure]
****Scale:**** [requests per second, data size]

Provide:

1. ****Cache layers**** – Where to cache (browser, CDN, application, database) and what goes where
2. ****Cache keys**** – Naming convention and key design
3. ****TTL strategy**** – Different TTLs for different data types with justification
4. ****Invalidation**** – How to invalidate when data changes (event-driven, TTL, manual)
5. ****Cache-aside vs write-through**** – Which pattern for which data
6. ****Stampede prevention**** – How to handle cache misses under high concurrency
7. ****Warming**** – Pre-populating cache on deploy
8. ****Monitoring**** – Hit rate, miss rate, eviction rate, memory usage
9. ****Implementation**** – Actual caching utility code with all the above built in

Pro tip: There are only two hard problems in computer science: cache invalidation, naming things, and off-by-one errors. Take cache invalidation seriously.

110. The GraphQL Schema Designer

When to use: When designing or refactoring a GraphQL API. **Prompt:**

Design a GraphQL schema for this domain:

****Application:**** [what it does]
****Key entities:**** [list main data types]
****Client needs:**** [what the frontend needs to fetch/mutate]
****Current data source:**** [database schema / REST API / etc.]

Provide:

1. ****Type definitions**** – All types, inputs, enums with descriptions
2. ****Queries**** – All query fields with arguments and return types
3. ****Mutations**** – All mutations with input types and response types
4. ****Subscriptions**** – Real-time events if applicable
5. ****Connections/Pagination**** – Relay-style cursor pagination
6. ****Error handling**** – Union types for errors vs custom error extensions
7. ****N+1 prevention**** – DataLoader implementation for batch loading
8. ****Authorization**** – Field-level auth directives or middleware
9. ****Complete schema file**** – Ready to use SDL
10. ****Example queries**** – 5 common operations with variables

Pro tip: Design your schema around what clients need, not around your database tables. GraphQL is a client-facing API, not a database mirror.

111. The Authentication System Design

When to use: When implementing user authentication from scratch or improving existing auth. **Prompt:**

Design an authentication system for my application:

****Type:**** [web app / mobile app / API / all]
****User types:**** [consumers / businesses / both]
****Requirements:**** [email+password, social login, MFA, SSO, etc.]
****Stack:**** [language, framework, database]
****Compliance:**** [GDPR, SOC2, HIPAA, or none]

Design:

1. ****Registration flow**** – Sign up, email verification, account activation
2. ****Login flow**** – Authentication, token generation, session management
3. ****Token strategy**** – JWT vs sessions, access + refresh token lifecycle
4. ****Password handling**** – Hashing (bcrypt/argon2), complexity rules, reset flow
5. ****MFA implementation**** – TOTP setup, backup codes, recovery
6. ****Social login**** – OAuth2 flows for major providers
7. ****Session management**** – Storage, expiration, revocation, concurrent sessions

8. ****Security measures**** – Brute force protection, account lockout, suspicious activity detection
9. ****Database schema**** – Users, sessions, tokens, audit log tables
10. ****Code**** – Core auth middleware and utility functions

Pro tip: Use bcrypt or argon2 for password hashing. If you're using SHA-256 or MD5, stop reading this and fix that first.

112. The CLI Tool Builder

When to use: When building a command-line tool or converting a script into a proper CLI. **Prompt:**

Help me build a CLI tool:

****Purpose:**** [what the tool does]
****Language:**** [Node.js / Python / Go / Rust / etc.]
****Commands:**** [list the main commands/subcommands]
****Input/Output:**** [what it reads, what it produces]

Build:

1. ****Command structure**** – Main command, subcommands, flags, arguments
2. ****Help text**** – Clear, useful --help output for every command
3. ****Input validation**** – Validate all arguments and flags, clear error messages
4. ****Configuration**** – Config file support (~/.toolrc) with sensible defaults
5. ****Output formatting**** – JSON for piping, pretty-printed for humans, --quiet/--verbose flags
6. ****Error handling**** – Meaningful exit codes, stderr for errors, stdout for output
7. ****Progress indicators**** – Spinners/progress bars for long operations
8. ****Shell completions**** – Tab completion for bash/zsh/fish
9. ****Testing**** – How to test CLI commands
10. ****Distribution**** – npm publish / pip install / brew formula / binary releases

Write the actual code with all the above implemented.

Pro tip: The first thing most people see is your --help text. Make it excellent. Include examples.

113. The OAuth2 Integration

When to use: When integrating with a third-party OAuth2 provider. **Prompt:**

Implement OAuth2 integration with [provider – Google/GitHub/Stripe/etc.]:

****My application:**** [web app / API / etc.]
****Stack:**** [language/framework]
****Scopes needed:**** [what access you need – email, repos, billing, etc.]
****Flow type:**** [authorization code / client credentials / PKCE]

Provide:

1. ****Setup**** – What to configure in the provider's dashboard
2. ****Authorization URL**** – Building the auth redirect with proper parameters
3. ****Callback handler**** – Exchange code for tokens, handle errors
4. ****Token storage**** – How to securely store access + refresh tokens
5. ****Token refresh**** – Automatic refresh before expiration
6. ****API calls**** – Making authenticated requests with the token
7. ****Webhook handling**** – If the provider sends webhooks (token revocation, etc.)
8. ****Error handling**** – Expired tokens, revoked access, rate limits
9. ****Security**** – State parameter, PKCE, token encryption at rest
10. ****Complete code**** – Working implementation ready to adapt

Pro tip: Always implement the state parameter to prevent CSRF attacks. It's one line of code that prevents a serious vulnerability.

114. The Data Migration Script

When to use: When moving data between systems, transforming schemas, or doing bulk updates. **Prompt:**

Write a data migration script:

```
**Source:** [where data is coming from – old database, CSV, API, etc.]  
**Destination:** [where data is going]  
**Data volume:** [how many records]  
**Transformation:** [what needs to change – field mapping, format conversion, etc.]  
**Constraints:** [zero downtime? idempotent? reversible?]
```

The script must:

1. ****Validate source data**** before migrating (schema check, required fields, data quality)
2. ****Transform**** according to the mapping rules
3. ****Handle errors gracefully**** – Log failures, continue with remaining records, retry transient failures
4. ****Be idempotent**** – Running it twice doesn't create duplicates
5. ****Support dry-run mode**** – Show what would happen without actually migrating
6. ****Progress reporting**** – Show progress, ETA, success/failure counts
7. ****Batch processing**** – Don't try to load everything into memory at once
8. ****Rollback plan**** – How to undo the migration
9. ****Verification**** – Post-migration validation that data matches expectations
10. ****Logging**** – Complete audit trail of what was migrated

Pro tip: Always run migrations with dry-run mode first, on a copy of the data. Never test migrations against production for the first time.

115. The Monorepo Setup Guide

When to use: When organizing multiple packages/services into a monorepo. **Prompt:**

Set up a monorepo for my projects:

```
**Packages/Services:** [list what needs to live in the repo]  
**Languages:** [TypeScript / Python / mixed]  
**Shared code:** [what's shared between packages]  
**CI/CD needs:** [only build/test what changed]  
**Team size:** [how many developers]
```

Provide:

1. ****Tool selection**** – Turborepo / Nx / pnpm workspaces / Lerna – which and why
2. ****Directory structure**** – Complete folder layout with explanation
3. ****Package configuration**** – package.json / tsconfig setup for shared dependencies
4. ****Build system**** – How to build individual packages and the whole repo
5. ****Dependency management**** – Shared vs package-specific deps, version consistency
6. ****CI optimization**** – Only run affected tests/builds on PR
7. ****Release strategy**** – Independent versioning vs lockstep
8. ****Developer experience**** – Scripts, aliases, documentation for onboarding
9. ****Configuration files**** – All config files needed, ready to copy

Pro tip: Start with pnpm workspaces + Turborepo. It's the simplest setup that handles 90% of monorepo needs without the complexity of Nx.

116. The Serverless Function Optimizer

When to use: When building or optimizing serverless functions (Lambda, Cloud Functions, Edge). **Prompt:**

Optimize my serverless function:

```
**Platform:** [AWS Lambda / Vercel / Cloudflare Workers / etc.]  
**Runtime:** [Node.js / Python / Go / etc.]  
**Current code:** [paste the function]  
**Problem:** [cold starts, timeout, memory, cost, etc.]  
**Trigger:** [HTTP / queue / cron / event]  
**Execution frequency:** [invocations per day/hour]
```

Optimize for:

1. ****Cold start reduction**** – Bundle size, lazy loading, runtime choice
2. ****Memory/CPU tuning**** – Right-size the function based on workload
3. ****Connection management**** – Database connection pooling in serverless context
4. ****Cost optimization**** – Duration, memory, invocation count optimizations
5. ****Error handling**** – Retries, dead letter queues, idempotency
6. ****Monitoring**** – What to track, custom metrics
7. ****Code**** – Optimized version with before/after comparison
8. ****Architecture**** – Should this even be serverless? Honest assessment.

Pro tip: The #1 Lambda optimization is reducing your bundle size. Tree-shake, minimize dependencies, and use ESM. A 5MB bundle warms up 10x faster than a 50MB one.

117. The Code Documentation Generator

When to use: When a codebase needs documentation beyond inline comments. **Prompt:**

Generate documentation for this codebase/module:

[paste code or describe the module structure]

Create:

1. ****README**** – What it does, quick start, installation, basic usage
2. ****Architecture overview**** – How the pieces fit together (ASCII diagram)
3. ****API reference**** – Every public function/method with params, return types, examples
4. ****Configuration guide**** – All config options with defaults and descriptions
5. ****Common patterns**** – How to accomplish typical tasks with code examples
6. ****Troubleshooting**** – Common errors and their solutions
7. ****Contributing guide**** – How to set up dev environment, run tests, submit changes
8. ****Changelog template**** – Format for tracking changes

Write for a developer who just joined the team. They're smart but know nothing about this project.

Pro tip: The best docs answer “how do I...” questions. Start with the 5 most common tasks a developer needs to do, and document those first.

118. The State Management Architect

When to use: When designing state management for a frontend application. **Prompt:**

Design a state management solution for my frontend app:

****Framework:**** [React / Vue / Svelte / etc.]
****App complexity:**** [simple / medium / complex with real-time data]
****Current approach:**** [useState everywhere / Redux / Zustand / chaos]
****Key state types:**** [list what state you manage – user data, forms, UI state, server cache, etc.]

Design:

1. ****State categories**** – Separate server state, client state, UI state, form state
2. ****Tool selection**** – Which library for each category (not everything needs a global store)
3. ****Store architecture**** – How to structure stores/slices/atoms
4. ****Server state**** – React Query / SWR / Apollo – caching, revalidation, optimistic updates
5. ****Client state**** – What needs to be global vs local
6. ****Form state**** – Validation, dirty tracking, submission
7. ****Derived state**** – Computed values, selectors, memoization
8. ****Persistence**** – What to persist to localStorage/sessionStorage
9. ****DevTools**** – How to debug state issues
10. ****Code**** – Example implementation of the most complex state interaction

Pro tip: 80% of “state management” problems are actually “server cache synchronization” problems. Use React Query or SWR for server state instead of putting API responses in Redux.

119. The Accessibility Audit

When to use: When checking or improving web accessibility compliance. **Prompt:**

Perform an accessibility audit on this component/page:

[paste HTML/JSX code or describe the UI]

Check against WCAG 2.1 AA:

1. **Semantic HTML** – Proper heading hierarchy, landmarks, lists, buttons vs links
2. **Keyboard navigation** – Tab order, focus management, keyboard traps, skip links
3. **Screen readers** – ARIA labels, live regions, alt text, form labels
4. **Color/contrast** – Contrast ratios, color-only information
5. **Motion** – Reduced motion preferences, auto-playing content
6. **Forms** – Labels, error messages, required fields, autocomplete attributes
7. **Images/media** – Alt text, captions, audio descriptions
8. **Touch targets** – Minimum sizes for mobile
9. **Dynamic content** – Loading states, error states, notifications announced to screen readers

For each issue:

- **Severity:** Critical (blocks users) / Major / Minor
- **Current code:** What's wrong
- **Fixed code:** The accessible version
- **Testing:** How to verify the fix works

Pro tip: Install a screen reader (VoiceOver on Mac is free) and try navigating your app with your eyes closed for 2 minutes. You'll find more issues than any automated tool.

120. The Technical Debt Tracker

When to use: When cataloging and prioritizing technical debt for a team or project. **Prompt:**

Help me catalog and prioritize technical debt in my project:

Project age: [how old is the codebase]
Team size: [developers]
Known pain points: [list what you already know is bad]
Upcoming plans: [features or changes planned that debt affects]

Create a technical debt register:

1. **Discovery** – Questions to ask the team to surface hidden debt
2. **Categories:**
 - Architecture debt (wrong patterns, scaling limits)
 - Code quality debt (duplication, complexity, no tests)
 - Dependency debt (outdated packages, EOL frameworks)
 - Documentation debt (missing or outdated docs)
 - Infrastructure debt (manual deploys, no monitoring)
 - Security debt (known vulnerabilities, missing auth)
3. **For each item:**
 - Description and location
 - Impact (who does it hurt and how)
 - Risk (what happens if we ignore it)
 - Effort estimate (t-shirt size)
 - Interest rate (is it getting worse over time?)
4. **Prioritization matrix** – Impact × urgency, accounting for interest rate
5. **Paydown strategy** – How to allocate time (20% rule, debt sprints, boy scout rule)
6. **Tracking** – Template for ongoing debt management

Output as a markdown table I can put in our project wiki.

Pro tip: Tech debt has “interest” — some debt gets more expensive to fix over time (dependency updates), while some stays stable (ugly but working code). Prioritize the high-interest items.

4. Writing & Content

121. The Blog Post Architect

When to use: When planning and writing a blog post that actually gets read. **Prompt:**

Write a blog post on [topic]:

****Target audience:**** [who's reading this]
****Goal:**** [educate / persuade / entertain / drive traffic]
****Tone:**** [professional / conversational / provocative / educational]
****Length:**** [target word count]
****SEO keyword:**** [primary keyword to target]

Structure:

1. ****Headline options**** – 5 headlines, each using a different formula (how-to, number, question, contrarian, curiosity gap)
2. ****Hook**** – Opening paragraph that makes them keep reading (not "In today's fast-paced world...")
3. ****Outline**** – H2 and H3 structure with key points under each
4. ****Full draft**** – Complete post with:
 - Subheadings every 200–300 words
 - At least one concrete example or story per section
 - Data or statistics where relevant
 - Internal link opportunities marked as [LINK: topic]
 - A clear takeaway in every section
5. ****CTA**** – End with a specific call to action
6. ****Meta description**** – 155 characters for SEO
7. ****Social snippets**** – Twitter and LinkedIn versions to promote the post

Do NOT start with "In today's..." or "Have you ever wondered..." – start with something that earns the next sentence.

Pro tip: Write the headline last. Once you know what the post actually says, the headline becomes obvious.

122. The Newsletter That Gets Opened

When to use: When writing an email newsletter that needs to stand out in crowded inboxes. **Prompt:**

Write a newsletter edition:

****Newsletter name:**** [name]
****Audience:**** [who subscribes]
****Topic this week:**** [main topic or theme]
****Key content to include:**** [articles, updates, insights, etc.]
****Tone:**** [describe your newsletter voice]
****Goal:**** [inform / drive clicks / build community / sell something]

Provide:

1. ****Subject lines**** – 5 options optimized for open rate (under 50 characters, curiosity-driven)
2. ****Preview text**** – The snippet that shows after the subject line (40–90 chars)
3. ****Opening hook**** – First 2 sentences that justify opening the email
4. ****Main content**** – Well-structured body with clear sections:
 - Use short paragraphs (2–3 sentences max)
 - Bold key phrases for scanners
 - Include one personal/human element
5. ****Links**** – Naturally integrated, not a link dump
6. ****CTA**** – One clear action you want readers to take
7. ****Sign-off**** – Memorable, on-brand closing

8. ****PS line**** – The second-most-read line in any email – use it wisely

Format for email (no markdown rendering – use plain formatting that works in email clients).

Pro tip: Your PS line gets read more than 90% of your email body. Put your most important CTA or most interesting teaser there.

123. The Social Media Hook Generator

When to use: When you need scroll-stopping opening lines for social content. **Prompt:**

Generate 10 social media hooks for this topic:

****Topic:**** [what you're posting about]
****Platform:**** [Twitter/X, LinkedIn, Instagram, TikTok]
****Audience:**** [who you're talking to]
****Goal:**** [engagement / clicks / shares / authority building]

For each hook:

1. The opening line (first thing they see before "see more")
2. Why it works (psychological trigger: curiosity gap, contrarian take, specific number, story opener, bold claim)
3. Suggested full post outline (2–3 bullet points of what follows the hook)

Hook formulas to use (mix them up):

- Contrarian: "Unpopular opinion: [challenge common belief]"
- Specific result: "I [achieved X] in [timeframe]. Here's exactly how:"
- Curiosity gap: "The [thing] nobody talks about in [industry]:"
- Story: "Last week, [something happened]. It changed how I think about [topic]."
- Question: "Why do [most people] [do wrong thing] when [better approach] exists?"
- List with twist: "5 [things] that [unexpected result]:"

No generic motivation. No "here's the thing." Every hook must create a reason to keep reading.

Pro tip: Write 10 hooks, pick the best 3, test them. The hook you think is best is usually not the one that performs best.

124. The Ghostwriter's Framework

When to use: When writing content in someone else's voice (CEO posts, thought leadership, speeches).
Prompt:

Write content in [person's name]'s voice:

****Content type:**** [LinkedIn post / speech / article / tweet thread]
****Topic:**** [what they want to say]
****Key message:**** [the one thing the audience should remember]

****Voice profile:****

- [Paste 2–3 examples of their previous writing/speaking]
- Vocabulary level: [simple / technical / mixed]
- Sentence style: [short and punchy / flowing / varied]
- Personality traits: [humble / bold / analytical / storytelling / etc.]
- Pet phrases or patterns: [list any recurring phrases]
- What they'd NEVER say: [out-of-character things to avoid]

Write the content matching their voice exactly. Then:

1. Highlight any phrases that might feel "off" for their voice
2. Suggest 2 places where a personal anecdote from their experience would strengthen it
3. Flag anything that might be controversial or need their explicit approval
4. Provide a "voice consistency score" (how closely it matches their samples) with notes on what to adjust

Pro tip: The trick to ghostwriting is what you DON'T write. Knowing their voice means knowing what they'd never say.

125. The Press Release That Gets Coverage

When to use: When announcing something newsworthy to media. **Prompt:**

Write a press release for:

****Announcement:**** [what's the news]
****Company/Person:**** [who's announcing]
****Target media:**** [tech press, local news, industry trade, etc.]
****Embargo date:**** [if applicable]
****Key differentiator:**** [why this matters – what's new/first/different]

Format as AP style:

1. ****Headline**** – Clear, factual, no hype words (not "revolutionary" or "game-changing")
2. ****Subheadline**** – Additional context
3. ****Dateline**** – City, Date
4. ****Lead paragraph**** – Who, what, when, where, why in the first paragraph
5. ****Body:****
 - Supporting details and context
 - Quote from company spokesperson (make it sound human, not corporate)
 - Quote from customer/partner (if applicable)
 - Market context or industry stats
 - Availability/pricing details
6. ****Boilerplate**** – Company description paragraph
7. ****Contact info**** – Media contact details
8. ****Pitch email**** – Separate email to journalists (personalized, explains why their readers care)

Write it like a journalist would write the story – if they can copy-paste your press release as an article, you've done it right.

Pro tip: Lead with the news, not the company. Journalists care about what happened, not your brand story. Save that for the boilerplate.

126. The Case Study Builder

When to use: When turning a customer success story into a persuasive case study. **Prompt:**

Write a case study based on this customer story:

****Customer:**** [company name and industry]
****Product/Service used:**** [what you provided]
****Before state:**** [what problems they had]
****After state:**** [what results they got]
****Timeline:**** [how long the transformation took]
****Key metrics:**** [numbers, percentages, dollar amounts]

Structure as:

1. ****Title**** – Result-focused: "[Company] achieved [result] with [product]"
2. ****Snapshot**** – One-paragraph summary with headline metrics
3. ****The Challenge**** – Paint the pain vividly. What was at stake?
4. ****Why Us**** – Why they chose your solution (without being salesy)
5. ****The Solution**** – What was implemented, step by step
6. ****The Results**** – Specific metrics, before/after comparison
7. ****Key Quote**** – A powerful customer quote (write a draft they can approve)
8. ****What's Next**** – Future plans, expansion
9. ****Sidebar: Quick Facts**** – Industry, company size, timeline, key results in bullet format

Also provide:

- 1-page PDF-friendly version
- 3 social posts to promote it
- Email to send the customer for approval

Pro tip: The best case studies read like stories, not testimonials. Create tension with the “before” state so the “after” feels like a real transformation.

127. The Whitepaper Framework

When to use: When creating a long-form authority piece to generate leads. **Prompt:**

Create a whitepaper on:

****Topic:**** [what the whitepaper covers]
****Audience:**** [decision-makers – their role, industry, sophistication level]
****Goal:**** [establish authority / generate leads / educate market / support sales]
****Our angle:**** [what perspective or data makes us credible on this topic]
****Length:**** [target page count – typically 8–15 pages]

Provide:

1. ****Title**** – Authoritative, specific, result-oriented
2. ****Executive Summary**** – The entire paper in one page (busy execs read only this)
3. ****Table of Contents**** – Clear section structure
4. ****Introduction**** – Why this topic matters NOW (market forces, trends, urgency)
5. ****The Problem**** – Deep dive into the challenge, with data
6. ****Analysis**** – Frameworks, research, expert perspectives
7. ****The Solution**** – Your methodology/approach (educational, not salesy)
8. ****Case examples**** – 2–3 real or anonymized examples
9. ****Implementation guide**** – Practical steps the reader can take
10. ****Conclusion**** – Key takeaways and clear next step
11. ****About section**** – Company credibility without hard selling
12. ****Landing page copy**** – For the download gate

Write in a professional but readable tone. This is thought leadership, not a textbook.

Pro tip: Gate the PDF, but give away the best insight on the landing page. If people feel tricked into giving their email, they’ll never become customers.

128. The Video Script Writer

When to use: When scripting a YouTube video, product demo, or course lesson. **Prompt:**

Write a video script for:

****Type:**** [YouTube / product demo / course lesson / ad / explainer]
****Topic:**** [what the video covers]
****Length:**** [target minutes]
****Audience:**** [who's watching and what they know]
****Tone:**** [educational / entertaining / professional / casual]
****Speaker:**** [on-camera person / voiceover / animated]

Provide:

1. ****Hook (0–15 seconds)**** – The opening that prevents them from scrolling away
2. ****Setup (15–60 seconds)**** – Why they should care, what they'll learn
3. ****Body**** – Main content broken into clear segments:
 - Each segment: [VISUAL: what's on screen] + [AUDIO: what's being said]
 - Retention techniques every 2–3 minutes (question, pattern interrupt, story, preview)
 - B-roll/graphic suggestions at key moments
4. ****CTA**** – What to do next (subscribe, click, buy, comment)
5. ****Outro**** – Clean ending, not a ramble

Formatting:

- Write conversationally (read it out loud – if it sounds stiff, rewrite it)
- Include [PAUSE] markers for emphasis
- Mark [EMPHASIS] on key words
- Keep sentences under 20 words for easy delivery
- Include timestamps for each section

Also provide: Title, thumbnail text (3–5 words), and description with timestamps.

Pro tip: Write for the ear, not the eye. Read your script out loud. If you stumble, your speaker will too. Conversational always beats formal in video.

129. The Email Sequence Writer

When to use: When building an automated email sequence (welcome, onboarding, nurture, etc.). **Prompt:**

Write a [number]-email sequence for:

****Purpose:**** [welcome / onboarding / nurture / re-engagement / cart abandonment / launch]
****Audience:**** [who receives these emails]
****Trigger:**** [what starts the sequence – signup, purchase, inactivity, etc.]
****Goal by end of sequence:**** [what action you want them to take]
****Brand voice:**** [describe tone]

For each email, provide:

1. ****Send timing**** – When it sends relative to trigger (Day 0, Day 1, Day 3, etc.)
2. ****Subject line**** – Primary + 1 A/B test variant
3. ****Preview text**** – 40-90 characters
4. ****Body**** – Full email copy, formatted for email (short paragraphs, mobile-friendly)
5. ****CTA**** – One clear call-to-action per email
6. ****Goal**** – What this specific email accomplishes in the sequence arc

Sequence design rules:

- Each email should work standalone (not everyone reads every email)
- Build in value before asking for anything
- Vary email length (mix short and long)
- Never send back-to-back "ask" emails
- Include at least one pure value email with no sales CTA

Pro tip: Your welcome email gets 4x the open rate of any other email you'll ever send. Make it count — deliver your best content there.

130. The Landing Page Copy

When to use: When writing conversion-focused copy for a landing page. **Prompt:**

Write landing page copy for:

****Product/Service:**** [what you're selling]
****Target audience:**** [who's landing on this page and where they came from]
****Main CTA:**** [what action you want – sign up, buy, book a call, download]
****Price point:**** [if applicable]
****Key differentiator:**** [why you, not them]

Write each section:

1. ****Hero Section:****
 - Headline (benefit-driven, under 10 words)
 - Subheadline (clarifies who it's for and what they get)
 - CTA button text (not "Submit" – action-oriented)
 - Social proof snippet (X customers, rating, notable logo)
2. ****Problem Section:****
 - Describe the pain (make them nod "that's me")
 - Agitate – what happens if they don't solve it
3. ****Solution Section:****
 - How your product solves it (features → benefits)
 - 3 key benefits with supporting details
4. ****Social Proof:****
 - 3 testimonial drafts (from different personas)
 - Metrics/logos section
5. ****How It Works:****
 - 3-step process (make it look easy)

6. ****Objection Handling:****
 - FAQ section addressing top 5 objections
7. ****Final CTA:****
 - Urgency or scarcity element
 - Risk reversal (guarantee, free trial)
 - Button text + surrounding copy

Write 3 versions of the headline – rational, emotional, and curiosity-driven.

Pro tip: Every section of the page should work as a standalone argument for buying. Many visitors scroll straight to the pricing — make sure the CTA section works without reading anything above it.

131. The Content Repurposing Engine

When to use: When you have one piece of content and want to turn it into 10. **Prompt:**

Repurpose this content into multiple formats:

****Original content:**** [paste your blog post, podcast transcript, video script, etc.]
****Platforms:**** [list where you publish – Twitter, LinkedIn, newsletter, Instagram, YouTube, etc.]
****Brand voice:**** [describe your tone]

Create:

1. ****Twitter/X thread**** – 5–10 tweets that tell the story, hook on tweet 1, CTA on last
2. ****LinkedIn post**** – Professional version with personal angle, ~200 words
3. ****Instagram carousel**** – 8–10 slide text (what each slide says, designed for swipe)
4. ****Newsletter section**** – Condensed version with link to full content
5. ****YouTube Short / TikTok script**** – 60-second version, conversational
6. ****Email to audience**** – Sharing the content with context for why it matters
7. ****Quote graphics**** – 5 pull-quotes formatted for social sharing
8. ****Podcast talking points**** – If discussing this on a podcast, key points and stories to tell
9. ****SEO snippet**** – Optimized meta description and H1 for the original

Each piece should feel native to its platform – not just copy-pasted excerpts.

Pro tip: The best content repurposing doesn't just shorten — it reframes. A blog post about “5 strategies” becomes a LinkedIn story about “the one strategy that changed everything.”

132. The Product Description Writer

When to use: When writing product descriptions that sell for e-commerce or SaaS. **Prompt:**

Write a product description for:

****Product:**** [name and what it is]
****Price:**** [price point]
****Target buyer:**** [who buys this and why]
****Key features:**** [list 5–8 features]
****Competitors:**** [what alternatives exist]
****Where it appears:**** [product page, Amazon listing, Shopify, etc.]

Provide:

1. ****Headline**** – Benefit-focused, not feature-focused
2. ****Short description**** – 25–50 words for search results and previews
3. ****Long description**** – Full product page copy:
 - Opening that connects with the buyer's desire/problem
 - Features translated to benefits (not “10GB storage” but “never worry about running out of space”)
 - Sensory/experiential language (how it feels to use)
 - Social proof placement suggestions
 - Specs section for detail-oriented buyers
4. ****Bullet points**** – 5 scannable feature-benefit bullets

5. ****SEO keywords**** – Primary and secondary keywords to include
6. ****Objection busters**** – Address the top 3 reasons someone wouldn't buy

If Amazon listing: include title (200 chars), bullets (5), A+ content sections.

Pro tip: Features tell, benefits sell. “Titanium frame” means nothing to most buyers. “Survives a 6-foot drop onto concrete” — now that’s a benefit.

133. The Thought Leadership Article

When to use: When establishing expertise and authority in an industry publication or blog. **Prompt:**

Write a thought leadership article:

****Author:**** [name and role – CEO, CTO, founder, etc.]
****Publication target:**** [company blog, Medium, industry publication, Forbes, etc.]
****Topic:**** [the big idea or trend you're addressing]
****Contrarian angle:**** [what conventional wisdom are you challenging?]
****Author's expertise:**** [why this person is credible on this topic]
****Audience:**** [peers, customers, investors, industry]

Structure:

1. ****Opening**** – Start with a bold statement, data point, or story that disrupts the reader's assumptions
2. ****The conventional wisdom**** – What everyone currently believes
3. ****Why it's wrong (or incomplete)**** – Your contrarian thesis with evidence
4. ****Supporting arguments**** – 3 pillars supporting your perspective:
 - Each with data, examples, or reasoning
 - Include at least one firsthand experience
5. ****Implications**** – What changes if your thesis is correct
6. ****Actionable advice**** – What the reader should do differently
7. ****Closing**** – Memorable ending that reinforces the key message

Do NOT write generic advice. If you could swap the author's name for anyone else and the article still works, it's not thought leadership – it's content filler.

Pro tip: Real thought leadership requires saying something others disagree with. If everyone nods along, you haven’t said anything new.

134. The Sales Email That Gets Replies

When to use: When writing cold outreach or warm follow-up emails. **Prompt:**

Write a sales email:

****Context:**** [cold outreach / warm follow-up / post-meeting / referral / post-event]
****Recipient:**** [their role, company, industry]
****What I'm selling:**** [product/service]
****Why they should care:**** [what problem it solves for THEM specifically]
****Desired action:**** [book a call, reply, try a demo, etc.]
****Previous contact:**** [any prior interaction or connection]

Rules:

- Under 125 words (short emails get more replies)
- No "I hope this finds you well"
- No "I'd love to pick your brain"
- Start with them, not you
- One clear ask
- Written like a human, not a sales robot

Provide:

1. ****Subject line**** – 3–5 words, lowercase, looks like a real email
2. ****Email body**** – Following the rules above
3. ****Follow-up email**** – For 3 days later if no reply (different angle, even shorter)
4. ****Breakup email**** – Final email in the sequence (polite, creates closure)

5. ****Personalization tokens**** – Where to customize for each recipient and what to research

Pro tip: The most effective subject lines look like they came from a colleague, not a marketer. “quick question” outperforms “Revolutionize Your [Industry] with [Product]” every time.

135. The Content Calendar Builder

When to use: When planning a month or quarter of content across platforms. **Prompt:**

Build a content calendar:

****Platforms:**** [list all channels – blog, Twitter, LinkedIn, newsletter, YouTube, etc.]
****Industry/niche:**** [what you talk about]
****Content pillars:**** [3–5 main topics you cover]
****Posting frequency:**** [how often per platform]
****Resources:**** [who creates content, tools available, budget for graphics/video]
****Goals:**** [brand awareness / leads / engagement / SEO / thought leadership]
****Timeframe:**** [1 month / 1 quarter]

Create:

1. ****Content themes**** – Weekly or bi-weekly themes that tie content together
2. ****Calendar grid**** – Date, platform, content type, topic, status columns
3. ****For each post:****
 - Working title/topic
 - Content type (article, carousel, video, thread, etc.)
 - Content pillar it belongs to
 - Brief description (1–2 sentences)
 - Cross-promotion plan (how it connects to other platforms)
4. ****Evergreen content**** – 5 pieces that can be re-shared quarterly
5. ****Trending/reactive slots**** – Blank slots for timely content
6. ****Metrics to track**** – KPIs per platform
7. ****Batch creation schedule**** – When to write, film, design (batching > daily creation)

Format as a table I can paste into Notion or a spreadsheet.

Pro tip: Plan themes, not individual posts. A weekly theme gives you a blog post, 3 social posts, and a newsletter section — all from one idea.

136. The SEO Content Brief

When to use: When creating content specifically optimized for search rankings. **Prompt:**

Create an SEO content brief for the keyword: [target keyword]

Research and provide:

1. ****Search intent**** – What the searcher actually wants (informational / commercial / transactional / navigational)
2. ****Title tag**** – Under 60 characters, keyword near the front
3. ****Meta description**** – Under 155 characters, includes keyword and CTA
4. ****URL slug**** – Clean, keyword-rich, short
5. ****H1**** – Primary heading (can differ from title tag)
6. ****Content structure:****
 - H2s and H3s (based on what top-ranking pages cover)
 - Target word count (based on competing content)
 - Questions to answer (People Also Ask, related searches)
 - Topics/subtopics to cover for topical completeness
7. ****Internal linking opportunities**** – Pages on your site to link to/from
8. ****External references**** – Authoritative sources to cite
9. ****Content differentiation**** – What to include that top results DON'T cover (your edge)
10. ****Featured snippet opportunity**** – How to format content to win a snippet
11. ****Visual content**** – Image/infographic/video suggestions

Write this as a brief a writer can follow without SEO knowledge.

Pro tip: The best SEO content is the most helpful answer to the searcher's question. Write for humans first, then optimize for Google — not the other way around.

137. The Social Proof Collector

When to use: When gathering, organizing, and deploying testimonials and social proof. **Prompt:**

Help me build a social proof system:

****Business:**** [what you sell]

****Current proof:**** [testimonials, reviews, case studies you already have]

****Platforms:**** [where you need social proof – website, ads, emails, social]

Create:

1. ****Testimonial request email**** – Template to ask happy customers for testimonials
 - Easy for them to respond (specific questions, not open-ended)
 - Ask for specific results/metrics
2. ****Follow-up template**** – If they agree but haven't sent it
3. ****Testimonial categories:****
 - Results-focused (numbers and outcomes)
 - Objection-crushing (addresses common fears)
 - Emotional (how it felt / life change)
 - Comparison ("better than [competitor/alternative]")
 - Specific use case (for each buyer persona)
4. ****Placement guide**** – Which testimonials go where on your site/funnel
5. ****Social proof formats:****
 - Pull quotes for landing pages
 - Case study teasers
 - User-generated content prompts
 - Review site strategy (which platforms to focus on)
6. ****Proof stacking**** – How to combine different types of proof for maximum impact

Pro tip: The most powerful testimonials address a specific objection. “I was worried about the price, but it paid for itself in 2 weeks” kills the price objection better than any copy you could write.

138. The Webinar Script Builder

When to use: When planning and scripting a webinar or live presentation. **Prompt:**

Script a webinar:

****Topic:**** [what you're teaching/presenting]

****Length:**** [30 / 45 / 60 minutes]

****Audience:**** [who's attending and what they know]

****Goal:**** [educate / generate leads / sell / build community]

****Offer at the end:**** [if selling, what's the CTA]

****Format:**** [solo presentation / interview / panel / workshop]

Provide:

1. ****Pre-webinar:****
 - Registration page headline and bullet points
 - Reminder email sequence (24 hours, 1 hour, starting now)
2. ****Opening (5 min):****
 - Hook that justifies their time
 - Credibility builder (brief, not bragging)
 - Agenda preview (promise specific outcomes)
3. ****Content (25–40 min):****
 - 3–4 main teaching sections
 - Engagement prompts every 5–7 minutes (polls, questions, chat prompts)
 - Stories and examples for each section
 - Slide suggestions for each section
4. ****Transition (5 min):**** – From teaching to offer (if applicable)
5. ****Offer/CTA (10 min):**** – What you're offering, why now, how to get it
6. ****Q&A (10 min):**** – Planted questions that address common objections
7. ****Follow-up:****
 - Attendee email (replay + offer)

- No-show email (FOMO + replay)
- Post-webinar nurture sequence

Pro tip: The transition from content to pitch is where most webinars lose people. Bridge it with “I’ve shown you WHAT to do. Now let me show you the fastest way to actually DO it.”

139. The Brand Story Framework

When to use: When crafting your company or personal origin story. **Prompt:**

Help me craft my brand story:

****Who:**** [founder/company]
****What you do:**** [product/service]
****Origin:**** [how and why this started – the raw, real version]
****Struggle:**** [what obstacles you faced]
****Mission:**** [what drives you beyond money]
****Audience:**** [who needs to hear this story]

Build the story using the StoryBrand framework:

1. ****The Character**** – Your customer is the hero, not you
2. ****Has a Problem**** – External, internal, and philosophical problems they face
3. ****Meets a Guide**** – You (the brand) as their guide with empathy + authority
4. ****Who Gives Them a Plan**** – Simple steps to engage with you
5. ****And Calls Them to Action**** – Direct CTA + transitional CTA
6. ****That Helps Them Avoid Failure**** – What happens if they don't act
7. ****And Ends in Success**** – The transformation they experience

Then write:

- ****About page copy**** (long version, 500 words)
- ****Elevator pitch**** (30 seconds / 50 words)
- ****Bio**** (third person, 100 words)
- ****Origin story for social**** (personal, vulnerable, 200 words)

Pro tip: Your origin story should make the reader think “they understand my problem” not “wow, what a great company.” The customer is the hero — you’re the guide.

140. The Email Subject Line Tester

When to use: When you need high-performing email subject lines for any campaign. **Prompt:**

Generate email subject lines for:

****Email purpose:**** [promotion, newsletter, announcement, follow-up, etc.]
****Audience:**** [who's receiving it]
****Key message:**** [what the email is about]
****Brand voice:**** [casual, professional, witty, etc.]

Generate 20 subject lines across these categories:

1. ****Curiosity gap**** (5) – Create intrigue without clickbait
2. ****Benefit-driven**** (3) – Clear value proposition
3. ****Urgency/scarcity**** (3) – Time or quantity pressure (genuine, not fake)
4. ****Personal/conversational**** (3) – Reads like it's from a friend
5. ****Question**** (3) – Provokes thought
6. ****Contrarian/surprising**** (3) – Challenges expectations

For each:

- Character count (aim for 30–50)
- Preview text pairing (40–90 chars)
- Expected open rate impact (higher/lower than average) and why
- A/B test pairing (which two to test against each other)

Flag any that might trigger spam filters.

Pro tip: Lowercase subject lines consistently outperform Title Case in B2B emails. They look like personal emails, not marketing blasts.

141. The Comparison Article Writer

When to use: When creating “X vs Y” content for SEO or buyer education. **Prompt:**

Write a comparison article: [Product A] vs [Product B]

****Audience:**** [who's making this buying decision]

****Our position:**** [are we one of the products, neutral third party, or affiliate?]

****Goal:**** [help them choose / steer toward us / pure SEO traffic]

Structure:

1. ****Quick verdict**** – TL;DR comparison in 3 sentences (don't hide the answer)
2. ****Comparison table**** – Features, pricing, pros, cons at a glance
3. ****Who each is best for**** – Clear personas for each product
4. ****Deep-dive sections:****
 - Key features compared (with screenshots/examples where relevant)
 - Pricing analysis (real costs, not just list prices – include hidden costs)
 - Ease of use (setup time, learning curve)
 - Integrations and ecosystem
 - Customer support quality
 - Scalability
5. ****What real users say**** – Summarize review trends from G2, Capterra, Reddit
6. ****Our recommendation**** – Clear guidance, not wishy-washy "it depends"
7. ****FAQ**** – Address remaining questions

Be fair even if we're one of the products. Credibility > sales pitch.

Pro tip: Comparison articles rank for high-intent commercial keywords. The person searching “Notion vs Obsidian” is closer to buying than someone searching “note-taking tips.”

142. The Product Launch Announcement

When to use: When launching a new product, feature, or major update. **Prompt:**

Write the launch content for:

****What's launching:**** [product/feature/update]

****Launch date:**** [when]

****Key benefits:**** [top 3 benefits for users]

****Target audience:**** [who cares most about this]

****Channels:**** [blog, email, social, PR, Product Hunt, etc.]

Create the full launch package:

1. ****Blog post**** – Detailed announcement with screenshots/demos
2. ****Email to existing users**** – Exciting but clear on what's new and how to use it
3. ****Email to non-users**** – Leverage the launch as a reason to try
4. ****Twitter/X launch thread**** – 5–8 tweets building excitement
5. ****LinkedIn announcement**** – Professional but human
6. ****Product Hunt listing**** – Tagline, description, first comment, maker comment
7. ****Changelog entry**** – Technical but friendly for developers/power users
8. ****Internal announcement**** – For the team (celebrate the work!)

Coordinate the timing:

- What goes live when (staging order)
- Embargo considerations
- Response plan for comments and questions

Pro tip: Launch on Tuesday or Wednesday morning. Monday is inbox catch-up, Friday is checkout. And always have a response ready for the first negative comment.

143. The Annual Report Copy

When to use: When creating year-in-review content for your audience or stakeholders. **Prompt:**

Write a year-in-review report:

****For:**** [company / personal brand / newsletter / product]
****Audience:**** [customers, investors, community, public]
****Key metrics:**** [list achievements, numbers, milestones]
****Honest moments:**** [challenges, failures, pivots – include these for authenticity]
****Tone:**** [transparent, celebratory, reflective, data-driven]

Structure:

1. ****Opening letter**** – Personal reflection from leadership (human, not corporate)
2. ****By the numbers**** – Visual-ready metrics and milestones
3. ****Highlights**** – Top 3–5 achievements with stories behind them
4. ****Challenges**** – What was hard and what you learned (this builds trust)
5. ****Customer impact**** – Stories of how you made a difference
6. ****Team**** – Growth, culture moments, key hires
7. ****What's next**** – Preview of upcoming year (build anticipation)
8. ****Thank you**** – Genuine appreciation for the community

Also provide:

- Social media summary version (thread or carousel)
- Email version for subscribers
- Infographic data points (what to visualize)

Pro tip: Including your failures and lessons makes the successes more credible. A report with only good news reads as propaganda.

144. The FAQ Page Writer

When to use: When building a comprehensive FAQ that actually reduces support tickets. **Prompt:**

Write a FAQ page for:

****Product/Service:**** [what you offer]
****Audience:**** [who has questions]
****Known questions:**** [list questions you already know people ask]
****Support ticket trends:**** [common support themes if available]
****Conversion blockers:**** [objections that stop people from buying]

Create:

1. ****Question categories**** – Group logically (Getting Started, Billing, Features, Troubleshooting, etc.)
2. ****For each question:****
 - Question written in the customer's language (not corporate-speak)
 - Answer that's direct (lead with the answer, then explain)
 - Structured with bold/lists for skimming
 - Link to detailed resource where relevant
3. ****Hidden sales FAQ**** – Questions that address buying objections disguised as helpful answers
4. ****SEO optimization**** – Questions formatted for Google's FAQ rich snippets (JSON-LD schema)
5. ****Maintenance plan**** – How to identify new FAQ needs from support data

Prioritize: most-asked questions first, conversion-blocking questions second, edge cases last.

Pro tip: Your FAQ page is a sales page in disguise. Every answer to “Can I cancel anytime?” or “Is my data secure?” is either building or breaking trust.

145. The Technical Blog Post

When to use: When writing a developer-focused technical article. **Prompt:**

Write a technical blog post:

****Topic:**** [what technical concept or tutorial]
****Audience:**** [skill level – beginner / intermediate / senior]
****Stack/Language:**** [relevant technologies]
****Goal:**** [teach a concept / share a solution / document a journey]

Structure:

1. ****Title**** – Clear, specific, includes the technology
2. ****TL;DR**** – The whole point in 2–3 sentences (respect the reader's time)
3. ****Prerequisites**** – What the reader needs to know/have installed
4. ****Introduction**** – Why this matters (real problem it solves, not abstract importance)
5. ****Body sections:****
 - Step-by-step with code blocks
 - Every code block should be runnable (no pseudo-code unless explicitly noted)
 - Explain the WHY, not just the WHAT (anyone can copy code – teach the reasoning)
 - Common pitfalls and how to avoid them
 - Include the errors they'll encounter and how to fix them
6. ****Complete working example**** – Full code they can copy and run
7. ****What's next**** – Where to go from here
8. ****References**** – Official docs, related articles

Format code blocks with syntax highlighting. Include file names above code blocks.

Pro tip: Include the error messages. Developers search for errors, not solutions. If your article shows the exact error they're seeing, Google will bring them to you.

146. The Cold DM Strategy

When to use: When reaching out to people on social platforms for business opportunities. **Prompt:**

Write cold DM templates for:

****Platform:**** [Twitter/X DMs, LinkedIn, Instagram]
****Goal:**** [partnership, collaboration, sales, hiring, guest posting, podcast booking]
****My profile:**** [who I am and what I offer]
****Target:**** [who I'm reaching out to and why]
****Relationship status:**** [complete stranger / engaged with their content / mutual connection]

For each situation provide:

1. ****Pre-outreach**** – What to do BEFORE sending the DM (engage with their content, etc.)
2. ****Opening message**** – Under 50 words. No pitch. Just connection.
3. ****Follow-up**** – After they respond positively
4. ****The ask**** – How to transition to your actual request
5. ****If no response**** – One (and only one) follow-up message, different angle

Rules:

- No "Hey, love your work!" without specifics
- No pitch in the first message
- Give before you ask
- Reference something specific they've said/done
- Make it about them, not you
- Include personalization markers [customize this part]

Pro tip: The best cold DMs don't feel cold. Engage with someone's content publicly for a week before DMing. By then, they recognize your name and you're not a stranger.

147. The Copywriting Formula Library

When to use: When you need proven copywriting structures for any context. **Prompt:**

Apply these copywriting formulas to my product/offer:

****Product:**** [what you're selling]
****Audience:**** [who you're selling to]

****Key benefit:**** [the main thing they get]
****Key pain point:**** [what they're struggling with]

Write my message using each of these formulas:

1. ****PAS**** (Problem-Agitate-Solve) – Name the pain, twist the knife, present the solution
2. ****AIDA**** (Attention-Interest-Desire-Action) – Hook, engage, want, act
3. ****BAB**** (Before-After-Bridge) – Current state, dream state, how to get there
4. ****4 Ps**** (Picture-Promise-Prove-Push) – Paint the vision, make the promise, show proof, ask for action
5. ****QUEST**** (Qualify-Understand-Educate-Stimulate-Transition) – Filter audience, empathize, teach, excite, convert

For each:

- Short version (social post / ad, under 100 words)
- Long version (email / landing section, 200–300 words)
- Label which parts map to which formula element

Then recommend which formula works best for my specific product and audience.

Pro tip: PAS works for almost everything. If you only learn one formula, learn PAS. Problem → Agitate → Solve. It's the Swiss Army knife of copywriting.

148. The Product Update Changelog

When to use: When writing release notes that users actually read. **Prompt:**

Write release notes / changelog for:

****Product:**** [name]
****Version/Date:**** [version number or date]
****Changes:****
– [list features, fixes, improvements]
****Audience:**** [developers / end users / both]
****Tone:**** [technical / friendly / mix]

Create:

1. ****Headline**** – One sentence that captures the most exciting change
2. ****TL;DR**** – 3 bullet points of what matters most
3. ****Categorized changes:****
 - 🌟 New features (what it does, why it matters, how to use it)
 - 🔧 Improvements (what changed and why it's better)
 - 🐛 Bug fixes (what was broken, now fixed – no blame)
 - ⚠️ Breaking changes (what broke, how to migrate – be explicit)
 - 🗑️ Deprecations (what's going away, timeline, alternatives)
4. ****Migration guide**** – If breaking changes exist, step-by-step upgrade instructions
5. ****What's next**** – Teaser of upcoming features

Make features sound exciting. Make breaking changes sound manageable. Make bug fixes sound like you care.

Pro tip: Lead with the feature your users have been asking for most. Nothing builds goodwill faster than “You asked for it — here it is.”

149. The Podcast Show Notes

When to use: When creating show notes, descriptions, and promotional content for podcast episodes.

Prompt:

Create podcast show notes for:

****Episode title:**** [title]
****Guest:**** [name and credentials, if applicable]

****Topic:**** [what the episode covers]
****Key timestamps:**** [list major topics with approximate times]
****Key quotes:**** [memorable lines from the episode]
****Resources mentioned:**** [links, books, tools discussed]

Create:

1. ****Episode description**** – 2–3 paragraph overview for podcast directories
2. ****Short description**** – 2 sentences for Apple Podcasts / Spotify preview
3. ****Timestamps**** – Clickable chapter markers with descriptions
4. ****Key takeaways**** – 5 bullet points of the most valuable insights
5. ****Notable quotes**** – 3 shareable quotes (formatted for social cards)
6. ****Resources**** – All links mentioned, organized by topic
7. ****Social promotion:****
 - Twitter thread highlighting key insights
 - LinkedIn post from host's perspective
 - Instagram carousel summarizing key points
 - Audiogram suggestions (which 30–60 second clips to pull)
8. ****SEO blog post**** – Article version of the episode for your website

Pro tip: Timestamps are the single most impactful show notes element. They let listeners skip to what they care about and dramatically improve the listening experience.

150. The Twitter/X Thread Builder

When to use: When creating educational or storytelling threads. **Prompt:**

Write a Twitter/X thread on:

****Topic:**** [what the thread covers]
****Goal:**** [educate / tell a story / build authority / promote something]
****Target audience:**** [who should engage with this]
****Thread length:**** [5–10 tweets / 10–15 tweets / 15+ tweets]

Structure:

1. ****Tweet 1 (Hook)**** – The most important tweet. Must stop the scroll. End with "👉" or "A thread:"
2. ****Tweet 2**** – Context or setup (why this matters)
3. ****Body tweets**** – Each tweet should:
 - Stand alone (make sense if someone sees just this one)
 - End with a reason to keep reading
 - Use line breaks for readability
 - Mix formats: statement, example, data, question, story
4. ****Tweet N–1**** – Summary or key takeaway
5. ****Final tweet**** – CTA (follow, retweet, reply, link)

Rules:

- No tweet should start with "So..." or "Now..."
- Each tweet under 280 characters
- Include at least one data point, one example, and one story
- No hashtags in the body (maybe 1–2 on the last tweet)
- Number the tweets (1/ 2/ 3/ etc.)

Also provide: A standalone tweet version (one tweet that captures the thread's essence) for people who won't read the full thread.

Pro tip: Tweet 1 does 80% of the work. If the hook doesn't stop someone mid-scroll, nothing else matters. Spend more time on tweet 1 than on the rest combined.

151. The YouTube Video Description

When to use: When optimizing YouTube video descriptions for SEO and engagement. **Prompt:**

Write a YouTube video description for:

****Video title:**** [title]

****Topic:**** [what the video covers]
****Target keyword:**** [primary search term]
****Video length:**** [duration]
****Key timestamps:**** [list major sections]
****Links to include:**** [products, resources, socials, etc.]

Create:

1. ****First 2 lines**** (visible before "show more"):
 - Hook + keyword
 - Clear value proposition
2. ****Expanded description:****
 - Paragraph summary with keywords naturally included
 - What the viewer will learn
3. ****Timestamps:****
 - 0:00 Introduction
 - [list all chapters]
4. ****Resources mentioned:****
 - Links organized by category
5. ****About section:****
 - Who you are, what the channel is about
6. ****Social links:****
 - All platforms
7. ****Tags suggestion:**** – 10–15 relevant tags
8. ****SEO notes:**** – Where to place keywords, hashtags to use

Format exactly as it should appear in the YouTube description box.

Pro tip: YouTube uses the first 2-3 sentences heavily for SEO. Front-load your primary keyword and make those lines compelling — they show in search results.

152. The Lead Magnet Creator

When to use: When building a free resource to capture email addresses. **Prompt:**

Design a lead magnet for:

****Business:**** [what you sell]
****Target audience:**** [who you want to attract]
****Their biggest problem:**** [what keeps them up at night]
****Your expertise:**** [what you know that they need]
****Format preference:**** [PDF guide / checklist / template / mini-course / tool / quiz]

Create:

1. ****Lead magnet concept**** – What it is and why someone would trade their email for it
2. ****Title**** – Specific, benefit-driven (not "Free Guide" – instead "The 27-Point Checklist That...")
3. ****Landing page copy:****
 - Headline, subheadline
 - 3–5 bullets of what they'll learn/get
 - CTA button text
 - Social proof element
4. ****Full content**** – The actual lead magnet content, ready to design
5. ****Thank you page**** – What they see after signing up (include an upsell or next step)
6. ****Delivery email**** – Subject line + email that delivers the lead magnet
7. ****Follow-up sequence**** – 3–5 emails that nurture them from lead to customer
8. ****Promotion plan**** – How to drive traffic to the landing page

The lead magnet should be genuinely valuable – something they'd pay \$20+ for. That's how you earn trust.

Pro tip: The best lead magnets solve a specific, immediate problem in under 10 minutes. A quick-win checklist outperforms a 50-page ebook because people actually use it.

153. The Brand Voice Guide

When to use: When documenting your brand's voice and tone for consistent communication. **Prompt:**

Create a brand voice guide for:

****Brand:**** [name]
****Industry:**** [what you do]
****Target audience:**** [who you talk to]
****Brand personality:**** [describe in 3-5 adjectives]
****Inspiration brands:**** [brands whose voice you admire]
****Current content examples:**** [paste 2-3 examples of your best content]

Build the complete guide:

1. ****Voice attributes**** – 3-4 core traits with descriptions:
 - What it IS (e.g., "Confident")
 - What it ISN'T (e.g., "Not arrogant")
 - Example copy demonstrating each trait
2. ****Tone spectrum**** – How voice adjusts by context:
 - Marketing: [tone]
 - Support: [tone]
 - Social: [tone]
 - Error messages: [tone]
 - Legal/compliance: [tone]
3. ****Vocabulary:****
 - Words we use (and why)
 - Words we never use (and why)
 - Jargon policy (when to use industry terms vs plain language)
4. ****Grammar and style:****
 - Contractions (yes/no)
 - Oxford comma (yes/no)
 - Emoji policy
 - Capitalization rules
5. ****Before/After examples**** – Rewrite generic copy in your voice (5 examples)
6. ****Quick reference card**** – One-page cheat sheet for writers

Pro tip: The “words we never use” list is more useful than the “words we use” list. Avoiding wrong words is easier than remembering right ones.

154. The Customer Onboarding Emails

When to use: When creating the email sequence for new customers/users. **Prompt:**

Write an onboarding email sequence for:

****Product:**** [what they just signed up for / purchased]
****User type:**** [consumer / business / developer]
****Key activation milestone:**** [what they need to do to get value – "first project", "connect data", "invite team"]
****Time to value:**** [how long it typically takes to see results]
****Churn risk points:**** [when/why people typically abandon]

Create a [number]-email sequence:

1. ****Welcome email (Day 0)**** – Confirm, excite, give ONE next step
2. ****Quick win (Day 1)**** – Get them to the "aha moment" fast
3. ****Feature spotlight (Day 3)**** – Introduce the feature that makes power users
4. ****Social proof (Day 5)**** – Show what others have achieved
5. ****Check-in (Day 7)**** – Ask if they need help (detect at-risk users)
6. ****Power tip (Day 10)**** – Advanced feature that deepens engagement
7. ****Milestone celebration (Day 14)**** – Celebrate what they've accomplished

For each email:

- Subject line + preview text
- Full email body (short, focused, one CTA)
- Behavioral trigger (send based on action/inaction if possible)
- Goal metric (what success looks like for this email)

Design the sequence so each email earns the right to send the next one.

Pro tip: The single most important onboarding email is the one triggered when a user DOESN'T complete the activation step. That's the save-the-customer moment.

155. The Competitor Content Analysis

When to use: When analyzing what's working for competitors' content strategy. **Prompt:**

Analyze the content strategy of these competitors:

****Competitors:**** [list 3–5 competitor names/URLs]
****My business:**** [what I do]
****Channels to analyze:**** [blog, social, email, YouTube, podcast]

For each competitor, analyze:

1. ****Content themes**** – What topics do they cover most?
2. ****Top-performing content**** – What gets the most engagement/shares/comments?
3. ****Publishing frequency**** – How often on each channel
4. ****Content formats**** – Articles, videos, threads, newsletters, etc.
5. ****Voice and positioning**** – How they sound, who they target
6. ****SEO strategy**** – Keywords they rank for that I don't
7. ****Distribution**** – How they promote content
8. ****Gaps**** – Topics they don't cover that their audience needs

Then synthesize:

1. ****Market content map**** – What the market talks about (and what nobody does)
2. ****Opportunity areas**** – Underserved topics I can own
3. ****Differentiation strategy**** – How my content can stand out
4. ****Content priorities**** – Top 10 pieces of content I should create first
5. ****Quick wins**** – Content I can create this week to start competing

Pro tip: Don't just copy what competitors do. Find what they DON'T do. The best content strategy fills gaps, not follows trends.

156. The Microcopy Writer

When to use: When writing UI text, button labels, error messages, and in-app copy. **Prompt:**

Write microcopy for this product/feature:

****Product:**** [what it is]
****Feature/Flow:**** [what the user is doing]
****Brand voice:**** [describe tone]
****User context:**** [are they new, stressed, confused, excited?]

Write microcopy for:

1. ****Empty states**** – What users see when there's no data yet (make it helpful and encouraging)
2. ****Button labels**** – Action-oriented, specific (not "Submit" – "Create Account")
3. ****Form labels and placeholders**** – Clear, concise, properly distinct
4. ****Validation messages**** – Helpful error messages that tell users how to fix the problem
5. ****Success messages**** – Celebrate without being annoying
6. ****Loading states**** – What to show while waiting (make the wait feel shorter)
7. ****Confirmation dialogs**** – Clear consequences, not "Are you sure?"
8. ****Tooltips**** – One sentence that actually helps
9. ****Onboarding hints**** – Contextual tips for new users
10. ****404 / Error pages**** – Helpful, on-brand, with clear next steps

For each, provide the copy and a brief note on why it works.

Pro tip: The best error messages follow three rules: say what happened, say why, and say how to fix it. "Something went wrong" is the worst microcopy in existence.

157. The LinkedIn Content Strategy

When to use: When building a thought leadership presence on LinkedIn. **Prompt:**

Build a LinkedIn content strategy for:

****Person:**** [name, title, industry]
****Goal:**** [personal brand / lead gen / hiring / thought leadership]
****Expertise areas:**** [what you know deeply]
****Target audience:**** [who you want to attract – clients, partners, recruiters, etc.]
****Posting frequency:**** [how often – 3x/week recommended]

Create:

1. ****Profile optimization:****
 - Headline formula (not just your job title)
 - About section (first person, engaging, with CTA)
 - Featured section strategy
2. ****Content pillars**** – 3–4 topics you'll rotate through
3. ****Post templates**** – 5 proven LinkedIn formats:
 - The personal story + lesson
 - The contrarian take
 - The listicle (X things I learned from Y)
 - The behind-the-scenes
 - The framework/mental model
4. ****First 2 weeks**** – 6 specific posts, fully written, ready to copy-paste
5. ****Engagement strategy**** – How to build reach beyond posting (comments, tags, timing)
6. ****Growth metrics**** – What to track and what's realistic
7. ****Content calendar**** – One month of topics mapped out

Pro tip: The first line of a LinkedIn post is your headline. Make it punchy and leave a line break after it. LinkedIn truncates after ~2 lines, so your hook must earn the “...see more” click.

158. The Pitch Deck Script

When to use: When writing the narrative and speaker notes for a pitch deck. **Prompt:**

Write the narrative for a pitch deck:

****Purpose:**** [fundraising / sales / partnership / internal buy-in]
****Audience:**** [investors / clients / executives / board]
****Company/Product:**** [what you do]
****Ask:**** [what you want – money, approval, partnership, etc.]
****Time:**** [how many minutes you have]
****Key data:**** [metrics, traction, financials]

For each slide, provide:

1. ****Slide title**** – What goes on the slide
2. ****Visual description**** – What the slide should look like (chart, image, bullets, etc.)
3. ****Speaker notes**** – Exactly what to say (conversational, not reading bullets)
4. ****Transition**** – How to move naturally to the next slide

Slide structure:

- Cover (company name, one-line description)
- Problem (make them feel the pain)
- Solution (your product, clearly explained)
- Demo/product (show, don't tell)
- Market size (TAM/SAM/SOM if investor pitch)
- Business model (how you make money)
- Traction (proof it's working)
- Team (why you'll win)
- Competition (honest positioning)
- Financials / roadmap
- The ask (specific, clear, justified)

The deck should tell a story, not present data. Every slide should make the next slide feel inevitable.

Pro tip: Practice with the “grandma test” — can someone with no industry knowledge follow your story? If not, simplify. Investors hear 10 pitches a week. Clarity wins.

159. The User Research Interview Guide

When to use: When preparing to interview users or customers. **Prompt:**

Create a user research interview guide for:

****Research goal:**** [what you're trying to learn]
****Product/Feature:**** [what you're researching about]
****Participant type:**** [who you're interviewing – current users, prospects, churned users]
****Interview length:**** [30 / 45 / 60 minutes]
****Method:**** [1-on-1 / group / remote / in-person]

Build:

1. ****Screening questionnaire**** – Questions to qualify the right participants
2. ****Interview script:****
 - Opening (build rapport, set expectations, consent for recording)
 - Warm-up questions (easy, builds comfort)
 - Core questions (organized by theme):
 - Current behavior ("Tell me about the last time you...")
 - Pain points ("What's the hardest part about...")
 - Solutions they've tried ("How do you currently handle...")
 - Reaction to concept (if showing something new)
 - Closing (anything we missed, referrals)
3. ****Follow-up probes**** – For each question, 2–3 follow-ups to go deeper
4. ****Things to watch for**** – Non-verbal cues and unexpected topics to explore
5. ****Analysis template**** – How to synthesize findings across interviews
6. ****Synthesis format**** – Template for presenting findings to stakeholders

Rules for questions:

- Open-ended (never yes/no)
- About past behavior (not hypothetical futures)
- No leading questions
- No "would you use...?" questions (people lie about future behavior)

Pro tip: The most valuable insights come from “tell me about the last time...” questions, not “would you use...” questions. Past behavior predicts future behavior. Hypotheticals don’t.

160. The Crisis Communication Template

When to use: When something goes wrong and you need to communicate fast and well. **Prompt:**

Write crisis communication for this situation:

****What happened:**** [describe the incident – data breach, outage, PR issue, product failure, etc.]
****Impact:**** [who's affected and how]
****Current status:**** [what you know and don't know right now]
****What you're doing:**** [actions taken and planned]
****Timeline:**** [when it happened, when you found out, when you expect resolution]

Create:

1. ****Internal team message**** (immediate) – What happened, what we know, what each team does next
2. ****Customer email**** (within hours) – Honest, clear, empathetic, actionable
3. ****Public statement**** (blog/social) – Transparent without oversharing
4. ****Support team script**** – How to handle incoming questions, with FAQ
5. ****Social media responses**** – Reply templates for common reactions (angry, worried, supportive)
6. ****Follow-up communication**** – Update template for ongoing situation
7. ****Post-mortem announcement**** – When it's resolved, what you learned and changed

Principles:

- Acknowledge immediately (silence = guilt)
- Say what you know AND what you don't know
- No corporate jargon or weasel words
- Take responsibility where appropriate

- Focus on impact to users, not your feelings
- Provide concrete next steps and timeline
- Over-communicate during the crisis, not after

Pro tip: The first 2 hours define public perception. A fast, honest, imperfect response beats a slow, polished one every time. People forgive mistakes. They don't forgive cover-ups.

5. Productivity & Systems

161. The Meeting Agenda Builder

When to use: Before any meeting to ensure it's worth everyone's time. **Prompt:**

Create a meeting agenda:

```

**Meeting type:** [standup / brainstorm / decision / status update / 1:1 / planning]
**Duration:** [how long]
**Attendees:** [who's joining and their roles]
**Purpose:** [what needs to happen – one sentence]
**Context:** [any pre-reading or background]
**Decision needed:** [if a decision meeting, what's being decided]

```

Build:

- **Pre-meeting:****
 - Pre-read materials (what to review before the meeting)
 - Questions attendees should come prepared to answer
- **Agenda:****
 - Time allocation per section (must total to meeting length)
 - Topic, owner, and desired outcome for each section
 - Decision points clearly marked
 - Parking lot for off-topic items
- **Meeting rules:****
 - Start on time, end 5 minutes early
 - Cameras on/off expectations
 - Note-taking responsibility
- **Meeting notes template:****
 - Decisions made
 - Action items (owner + deadline)
 - Open questions
 - Follow-up needed
- **Post-meeting email**** – Template to send within 1 hour summarizing outcomes

If this meeting could be an email, say so and write the email instead.

Pro tip: The best meetings have a stated desired outcome. “Decide which vendor to go with” is a good meeting. “Discuss vendor options” is a waste of time. Every meeting needs a verb, not just a noun.

162. The SOP (Standard Operating Procedure) Writer

When to use: When documenting a process so anyone can follow it. **Prompt:**

Write a Standard Operating Procedure for:

```

**Process:** [what's being documented]
**Who performs it:** [role/team]
**Frequency:** [how often – daily, weekly, on-demand, etc.]
**Current state:** [is this already done ad-hoc, or brand new?]
**Tools used:** [software, equipment, systems involved]

```

Create:

- **Header:****
 - SOP title, version, date
 - Owner (who maintains this SOP)

- Approved by
- Review schedule
- 2. ****Purpose**** – Why this process exists (one paragraph)
- 3. ****Scope**** – What's covered and what's not
- 4. ****Prerequisites**** – Access, permissions, tools, knowledge needed before starting
- 5. ****Step-by-step procedure:****
 - Numbered steps with clear actions (start each with a verb)
 - Screenshots or descriptions of what you should see at each step
 - Decision points: "If X, go to step Y. If Z, go to step W."
 - Expected time per step
 - Common mistakes and how to avoid them
- 6. ****Verification**** – How to confirm the process was done correctly
- 7. ****Troubleshooting**** – If something goes wrong at each step
- 8. ****Appendix**** – Reference materials, templates, contact info

Write it so someone doing this for the first time can follow it without asking questions.

Pro tip: Test your SOP by having someone who's never done the process follow it step by step. Every question they ask is a gap in your documentation.

163. The Decision Framework

When to use: When facing a complex decision and need a structured way to think through it. **Prompt:**

Help me make this decision:

****Decision:**** [what I'm deciding]
****Options:**** [list the choices]
****Constraints:**** [budget, time, resources, non-negotiables]
****Stakeholders:**** [who's affected]
****Timeline:**** [when this needs to be decided]
****Reversibility:**** [easy to undo / hard to undo / irreversible]

Analyze using:

1. ****Criteria definition**** – What factors matter most? Weight them (1–10)
2. ****Options matrix**** – Score each option against each criterion
3. ****Second-order effects**** – For each option, what happens next? And after that?
4. ****Pre-mortem**** – Imagine each option failed. What went wrong?
5. ****Regret minimization**** – Which option would I regret NOT choosing in 10 years?
6. ****Reversibility check**** – Can I start one option and switch if it's wrong?
7. ****Stakeholder impact**** – Who benefits and who loses with each option
8. ****Recommendation**** – Clear recommendation with confidence level (high/medium/low)
9. ****Decision log entry**** – Document the decision, reasoning, and review date

If this is a reversible decision, bias toward action. If irreversible, bias toward caution.

Pro tip: Most decisions are reversible — we just treat them like they're not. Ask “can I undo this in 6 months?” If yes, decide fast and learn from the result instead of agonizing.

164. The Project Plan Generator

When to use: When kicking off a new project and need a comprehensive plan. **Prompt:**

Create a project plan for:

****Project:**** [what we're building/doing]
****Goal:**** [what success looks like – specific and measurable]
****Team:**** [who's available and their roles]
****Timeline:**** [deadline or target completion]
****Budget:**** [if applicable]
****Dependencies:**** [what needs to happen first or from other teams]

Build:

1. ****Project brief**** – One-page summary: goal, scope, success criteria, non-goals
2. ****Milestones**** – 3–5 major checkpoints with dates

3. ****Work breakdown:****
 - Phase/Epic level
 - Task level under each phase
 - Each task: description, owner, effort estimate, dependencies
4. ****Risk register**** – Top 5 risks with probability, impact, and mitigation
5. ****Communication plan:****
 - Status update frequency and format
 - Stakeholder update schedule
 - Escalation path
6. ****Resource allocation**** – Who does what, when
7. ****Definition of done**** – How we know each milestone is complete
8. ****Launch checklist**** – Everything that needs to be true before we ship
9. ****Retrospective questions**** – What to discuss after the project

Format the tasks as something I can paste into [project management tool – Notion, Linear, Jira, etc.].

Pro tip: The most important part of a project plan is the “non-goals” section. Scope creep kills more projects than bad execution. Be explicit about what you’re NOT doing.

165. The Weekly Review System

When to use: At the end of each week to reflect, plan, and stay on track. **Prompt:**

Guide me through a weekly review:

****What happened this week:**** [key events, accomplishments, challenges]
****Open projects:**** [list active projects and their status]
****How I'm feeling:**** [energy level, motivation, stress]

Walk me through:

1. ****Capture**** – Collect loose ends:
 - Unprocessed notes, messages, bookmarks
 - Commitments I made to others
 - Ideas I had but didn't act on
2. ****Review**** – Check all horizons:
 - Calendar (past week: anything to follow up on?)
 - Calendar (next 2 weeks: anything to prepare for?)
 - Project list: is each still relevant? Next action clear?
 - Waiting-for list: anything I need to follow up on?
 - Someday/maybe: anything ready to activate?
3. ****Reflect:****
 - What went well? (celebrate wins, even small ones)
 - What didn't go well? (no judgment, just observation)
 - What did I learn?
 - Am I spending time on what matters most?
4. ****Plan next week:****
 - Top 3 priorities (if nothing else gets done, do these)
 - Key meetings to prepare for
 - Blocks of deep work to protect
 - One thing to improve from this week's lessons
5. ****Energy check:****
 - Am I approaching burnout?
 - What would recharge me this weekend?

Output as a filled-in template I can save to my notes.

Pro tip: The weekly review works best as a ritual — same time, same place, same order. Friday afternoon or Sunday evening. Consistency matters more than duration.

166. The Delegation Brief

When to use: When assigning work to a team member, contractor, or VA. **Prompt:**

Create a delegation brief for this task:

****Task:**** [what needs to be done]
****Delegate to:**** [who – employee, VA, freelancer, agency]
****Their skill level:**** [expert, competent, beginner in this area]
****Deadline:**** [when it's due]
****Budget:**** [if applicable]
****Quality bar:**** [what "done well" looks like]

Build the brief:

1. ****Objective**** – What we're trying to accomplish (not just the task, but the WHY)
2. ****Deliverable**** – Exactly what I expect to receive back (format, length, specifications)
3. ****Context**** – Background they need to do this well
4. ****Scope boundaries:****
 - What's IN scope
 - What's OUT of scope
 - Where they have creative freedom
 - Where they must follow the spec exactly
5. ****Resources**** – Files, access, examples, references they'll need
6. ****Check-in points:****
 - When to check in (don't wait until deadline)
 - What to show at each check-in
 - Who to ask if stuck
7. ****Examples:****
 - Good example (what success looks like)
 - Bad example (common mistakes to avoid)
8. ****Acceptance criteria**** – How I'll evaluate if it's done right

The brief should be detailed enough that they can complete the work without asking me more than 1-2 clarifying questions.

Pro tip: Invest 15 minutes in a clear brief to save hours of revision cycles. The #1 cause of delegation failure is unclear expectations, not incompetent people.

167. The Automation Opportunity Finder

When to use: When looking for tasks to automate in your workflow. **Prompt:**

Help me identify automation opportunities:

****My role:**** [what I do]
****Typical week:**** [describe your recurring tasks and time spent on each]
****Tools I use:**** [list software, apps, services]
****Pain points:**** [what feels repetitive, tedious, or error-prone]
****Technical skill:**** [can I code / use no-code tools / need fully managed solutions]

Analyze and provide:

1. ****Automation audit**** – For each recurring task:
 - Time spent per week
 - Automation feasibility (easy / moderate / hard)
 - Potential time saved
 - Recommended tool or approach
2. ****Quick wins**** – Automations I can set up in under 1 hour:
 - Step-by-step setup instructions
 - Tools: Zapier, Make, Apple Shortcuts, cron jobs, scripts
3. ****Medium effort**** – Automations worth a half-day investment
4. ****Advanced**** – Bigger projects that would save significant time
5. ****Priority ranking**** – Sorted by (time saved × ease of setup)
6. ****Template workflows**** – For the top 3 automations, provide the exact workflow:
 - Trigger → Actions → Output
 - Configuration details
 - Error handling
7. ****ROI calculation**** – Hours saved per month × hourly rate value

Focus on the 80/20: which 20% of automations will eliminate 80% of the tedium?

Pro tip: Automate the process AFTER you've optimized it. Automating a bad process just makes bad things happen faster.

168. The Email Management System

When to use: When email is overwhelming and you need a system to tame it. **Prompt:**

Design an email management system for me:

****Email volume:**** [how many emails per day]
****Email types:**** [newsletters, clients, internal, support, sales, etc.]
****Current approach:**** [describe your current system or lack thereof]
****Tools:**** [Gmail, Outlook, etc.]
****Goal:**** [inbox zero, quick response times, less time in email, etc.]

Build:

1. ****Triage system:****
 - Categories/labels to create
 - Rules for each category (auto-filter, archive, flag)
 - The 4 Ds: Do, Delegate, Defer, Delete – decision tree for each email
2. ****Processing schedule:****
 - When to check email (not constantly)
 - Time blocks for processing
 - SLA by email type (client: 4h, internal: 24h, newsletter: batch weekly)
3. ****Filter/rule setup:****
 - Automated filters to create (exact rules for Gmail/Outlook)
 - VIP senders that bypass filters
 - Newsletter digest approach
4. ****Template library:****
 - 5 templates for your most common reply types
 - Keyboard shortcuts to trigger them
5. ****Folder/Label structure:****
 - Active, waiting, reference, archive
 - Naming convention
6. ****Weekly maintenance:****
 - End-of-week email cleanup routine
 - Unsubscribe review

The goal: spend less than 1 hour per day on email while responding faster to what matters.

Pro tip: Check email 3 times a day, not 30. Every time you switch to email, it takes 23 minutes to regain deep focus on what you were doing.

169. The OKR Setting Framework

When to use: When setting quarterly or annual goals using the OKR format. **Prompt:**

Help me set OKRs for:

****Timeframe:**** [Q1-Q4, H1/H2, annual]
****Level:**** [company / team / individual]
****Mission/Vision:**** [what's the overarching goal]
****Last period's results:**** [what did we achieve, what fell short]
****Key priorities:**** [what matters most right now]
****Resources:**** [team size, budget constraints]

Create:

1. ****3-5 Objectives**** – Each should be:
 - Qualitative and inspirational (no numbers in the objective)
 - Ambitious but achievable (aim for 70% completion)
 - Clear enough that everyone knows what "done" looks like
2. ****3-4 Key Results per Objective**** – Each should be:
 - Quantitative and measurable
 - Time-bound
 - Outcome-based (not activity-based – "increase revenue to \$1M" not "make 100 sales calls")
 - Include current baseline and target
3. ****Initiatives**** – Under each KR, 2-3 specific projects/actions that drive it

4. ****Alignment check:****
 - How do these connect to company/team level OKRs?
 - Any conflicts or dependencies between OKRs?
5. ****Scoring rubric:****
 - 0.0 = no progress
 - 0.3 = some progress
 - 0.7 = delivered (this is the target – not 1.0)
 - 1.0 = exceptional
6. ****Check-in schedule**** – Weekly confidence rating, monthly review, end-of-quarter scoring

Format as a clean table I can present to my team.

Pro tip: If you're consistently scoring 1.0 on OKRs, you're setting them too easy. The sweet spot is 0.6-0.7. OKRs should make you uncomfortable.

170. The Process Improvement Analyzer

When to use: When a workflow is clunky and needs streamlining. **Prompt:**

Improve this process:

****Process name:**** [what it is]
****Current steps:**** [list every step, even the ones that feel dumb]
****Time per cycle:**** [how long the whole thing takes]
****Frequency:**** [how often this process runs]
****Pain points:**** [where it breaks, slows down, or frustrates people]
****People involved:**** [roles and handoff points]
****Tools used:**** [current tools in the process]

Analyze:

1. ****Process map**** – Visual flow of current state (ASCII diagram)
2. ****Waste identification:****
 - Waiting time (handoffs, approvals, queues)
 - Redundant steps (doing the same thing twice)
 - Over-processing (more effort than needed)
 - Manual steps that could be automated
 - Error-prone steps that cause rework
3. ****Improved process:****
 - Optimized flow (ASCII diagram)
 - Steps eliminated and why
 - Steps automated and how
 - Steps combined and why
 - New tools suggested
4. ****Impact estimate:****
 - Time saved per cycle
 - Time saved per month
 - Error reduction
 - People freed up
5. ****Implementation plan:****
 - Changes ranked by effort vs. impact
 - Quick wins (this week)
 - Medium-term improvements (this month)
 - Structural changes (this quarter)

Pro tip: Before optimizing, ask “should this process exist at all?” Eliminating a step entirely is always better than optimizing it.

171. The Knowledge Base Architect

When to use: When building an internal knowledge base or wiki from scratch. **Prompt:**

Design a knowledge base structure for:

****Organization:**** [team/company type and size]
****Purpose:**** [internal wiki, customer help center, product docs, or all]

****Current state:**** [scattered docs, tribal knowledge, nothing, etc.]
****Tool:**** [Notion, Confluence, GitBook, etc.]
****Key audiences:**** [who needs to find information here]

Build:

1. ****Information architecture:****
 - Top-level categories (spaces/sections)
 - Sub-categories under each
 - Naming conventions
2. ****Template library:****
 - Meeting notes template
 - Project brief template
 - Decision record template
 - How-to guide template
 - Troubleshooting template
 - Onboarding checklist template
3. ****Tagging system**** – Tags for cross-cutting concerns (team, project, status, type)
4. ****Search optimization**** – How to title and structure docs for findability
5. ****Maintenance plan:****
 - Doc ownership rules (every doc has an owner)
 - Review schedule (quarterly staleness check)
 - Archive vs. delete policy
6. ****Migration plan**** – How to move existing docs into the new structure
7. ****Adoption strategy**** – How to get the team to actually use it

The #1 rule: make it easier to find info in the KB than to ask someone. If it's not, people won't use it.

Pro tip: Start with the 20 questions people ask most often. Document those first. A knowledge base with 20 great articles beats one with 200 mediocre ones.

172. The Habit Tracker Design

When to use: When building a personal or team habit system. **Prompt:**

Design a habit tracking system for:

****Goals:**** [what I want to achieve through habits]
****Current habits:**** [what I already do consistently]
****Habits I want to build:**** [new habits to add]
****Habits I want to break:**** [what to stop doing]
****Tools preferred:**** [app, spreadsheet, notebook, Notion, etc.]

Build:

1. ****Habit stack**** – Connect new habits to existing ones (after I [existing habit], I will [new habit])
2. ****Keystone habits**** – Identify 2–3 habits that make other habits easier
3. ****Habit scorecard:****
 - Each habit with:
 - Cue (when/where)
 - Craving (why you want to do it)
 - Response (the habit itself, made as easy as possible)
 - Reward (immediate satisfaction)
4. ****Tracking template**** – Daily/weekly tracker layout
5. ****Implementation intentions:****
 - "I will [behavior] at [time] in [location]"
 - Specific, not vague
6. ****Two-minute versions**** – Scale each habit down to 2 minutes for bad days
7. ****Environment design**** – Physical/digital changes that make good habits obvious and bad habits invisible
8. ****Accountability system**** – How to stay on track (don't rely on motivation)
9. ****Review cadence**** – Weekly and monthly check-ins on habit adherence

Pro tip: Never miss twice. Missing once is an accident. Missing twice is the start of a new (bad) habit. The two-minute version exists for days you don't feel like it.

173. The Retrospective Facilitator

When to use: After any project, sprint, or significant event to capture learnings. **Prompt:**

Facilitate a retrospective for:

****What happened:**** [project, sprint, event, quarter, etc.]
****Team size:**** [number of participants]
****Duration:**** [30 / 45 / 60 minutes]
****Format:**** [in-person / remote]
****Mood:**** [celebratory, frustrated, mixed, exhausted]

Design:

1. ****Opening (5 min):****
 - Set the tone (safe space, blameless, constructive)
 - Quick pulse check (1–5, how was this experience?)
2. ****Data gathering (10 min):****
 - Choose a format based on mood:
 - Standard: What went well / What didn't / What to change
 - Starfish: Start / Stop / Continue / More of / Less of
 - 4Ls: Liked / Learned / Lacked / Longed for
 - Sailboat: Wind (what helped) / Anchor (what slowed us) / Rocks (risks ahead)
3. ****Discussion (15–25 min):****
 - Affinity grouping (cluster similar items)
 - Dot voting (prioritize what to discuss)
 - For top 3 items: root cause discussion + action proposal
4. ****Action items (10 min):****
 - Each action: specific, owned, time-bound
 - Maximum 3 actions (more = none get done)
5. ****Closing (5 min):****
 - One word to describe how you feel now
 - Appreciation round (acknowledge someone who helped)

Output template: Clean summary with actions, owners, and due dates.

Pro tip: The retrospective is only valuable if actions actually happen. Review last retro's actions at the START of the next one. Public accountability drives change.

174. The Priority Matrix

When to use: When everything feels urgent and you need to focus. **Prompt:**

Help me prioritize my current workload:

****Everything on my plate:**** [list ALL tasks, projects, and commitments]
****Deadlines:**** [any hard deadlines]
****Goals this quarter:**** [what I'm trying to achieve]
****Hours available:**** [realistic time per week for focused work]
****Energy level:**** [high / medium / low / burnout risk]

Analyze using:

1. ****Eisenhower Matrix:****
 - Urgent + Important → DO now
 - Important + Not Urgent → SCHEDULE
 - Urgent + Not Important → DELEGATE
 - Neither → ELIMINATE
2. ****Impact/Effort matrix:****
 - Quick wins (high impact, low effort) → Do first
 - Big bets (high impact, high effort) → Plan carefully
 - Fill-ins (low impact, low effort) → Do in dead time
 - Money pits (low impact, high effort) → Drop or delegate
3. ****Energy matching:****
 - Map tasks to energy levels (creative work in peak hours, admin in low energy)
4. ****This week's plan:****
 - Monday–Friday, specific time blocks
 - Top 3 must-completes

- What to say no to (with scripts for declining gracefully)
- 5. ****Delegation candidates**** – Tasks someone else could do 80% as well
- 6. ****Things to drop**** – Tasks that feel important but aren't (be honest)

Give me a clear, no-BS priority list. Be willing to say "drop this."

Pro tip: If everything is priority 1, nothing is priority 1. Force-rank your list. The pain of choosing what NOT to do is what makes prioritization work.

175. The Onboarding Program Designer

When to use: When creating a new employee or customer onboarding program. **Prompt:**

Design an onboarding program for:

****Who's being onboarded:**** [new employee / customer / user / partner]
****Role/Type:**** [specific role or customer segment]
****Team/Product:**** [what they're joining or using]
****Current onboarding:**** [describe current experience or "none"]
****Timeline:**** [first 30/60/90 days]
****Success metric:**** [what a successfully onboarded person looks like]

Create:

1. ****Pre-day-1:**** – What to send/prepare before they start
2. ****Day 1:****
 - Welcome experience
 - Access and tools setup
 - Key introductions
 - First small win
3. ****Week 1:****
 - Learning objectives
 - Key meetings
 - Resources to review
 - End-of-week check-in
4. ****30-day milestone:****
 - Skills mastered
 - Relationships built
 - First meaningful contribution
 - Check-in conversation guide
5. ****60-day milestone:****
 - Increased independence
 - First owned project/outcome
 - Feedback session
6. ****90-day milestone:****
 - Fully productive
 - Cultural integration
 - Performance baseline set
7. ****Buddy/mentor system**** – Who supports them and how
8. ****Feedback loops**** – How to measure onboarding effectiveness

The goal: make them feel confident and productive as fast as possible, not overwhelmed.

Pro tip: The #1 predictor of onboarding success is whether the new person has a “win” in their first week. Engineer a quick win — assign them something they can complete and feel good about immediately.

176. The Status Update Template

When to use: When sending regular project or work status updates. **Prompt:**

Write a status update:

****Update type:**** [weekly / monthly / project milestone / stakeholder briefing]
****Audience:**** [boss, team, client, investors, board]
****Project/Work:**** [what you're updating on]
****Period:**** [what timeframe this covers]
****Current status:**** [on track / at risk / behind / ahead]

****Key developments:**** [what happened]
****Blockers:**** [what's in the way]

Format as:

1. ****TL;DR**** – One sentence: are we on track? If not, what's the headline?
2. ****Status indicator:**** ● On Track | ● At Risk | ● Behind
3. ****Accomplishments**** – What got done (be specific – outcomes, not activities)
4. ****Metrics**** – Key numbers with trend arrows (↑↓→)
5. ****Upcoming**** – What's planned for next period
6. ****Risks/Blockers**** – What could go wrong + what you need from the reader
7. ****Decisions needed**** – If you need the reader to decide something, make it easy:
 - Context (1–2 sentences)
 - Options (2–3)
 - Your recommendation

Keep it under 300 words. Executives read the TL;DR and skip to "Decisions needed." Design accordingly.

Pro tip: Lead with the bad news. Burying blockers under good news erodes trust. A status update that's always green until suddenly red is worse than one that's honest about yellow.
